## **Canadian Data Report of Fisheries and Aquatic Sciences**

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

## **Rapport statistique canadien des sciences halieutiques et aquatiques**

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

## ABSTRACT

Newbould, K.A. 1983. Hatchery salmonid production and distribution (1976-82), Nova Scotia, New Brunswick and Prince Edward Island. Can. Data Rep. Fish. Aquat. Sci. No. 460. ix + 260 p.

This data record provides summaries of numbers, lengths and weights for all species of fish produced and distributed in 1982 by hatcheries of the Scotia-Fundy and Gulf regions of the Fisheries Research Branch, Department of Fisheries and Oceans. Also included are fish produced and distributed in 1982 by the Nova Scotia Department of Lands and Forests, the New Brunswick Department of Natural Resources and the North American Salmon Research Centre. Data are subdivided by hatchery, developmental stage and species; and are also provided by county, province and various administrative categories. Records for 1976-82 provide the following data for each location stocked: county, location name, location code (which is unique and can be matched to latitude and longitude), number of fish released, mean fork length of group, total weight, marks (such as tags or fin clips), species, stock description, developmental stage and station or agency of origin.

Key words: Hatchery, aquaculture, stocking, tagging, fork length, weight, Atlantic salmon, trout, Scotia-Fundy Region, Gulf Region.

## RÉSUMÉ

Newbould, K.A. 1983. Hatchery salmonid production and distribution (1976-82), Nova Scotia, New Brunswick and Prince Edward Island. Can. Data Rep. Fish. Aquat. Sci. No. 460. ix + 260 p.

Ce dossier présente un rapport succinct de données ayant trait au nombre, à la taille et au poids de toutes les espèces de poissons élevées et distribués en 1982 par les établissements piscicoles et région du Scotia-Fundy et région du Golfe de la Direction des recherches, ministère des Pêches et Océans. Les poissons qui étaient produits et distribués en 1982 par le ministère des Terrains et des Forêts de Nouvelle-Écosse, le ministère des Ressources Naturelles de Nouveau-Brunswick et le centre de recherche pour le saumon de l'Amérique du Nord sont aussi inclus. Les données indiquées sont réparties par établissement piscicole, stage de développement et espèce ainsi que par comté, province et catégories administratives diverses. Les dossiers de 1976-82 donnent les renseignements suivants pour chaque endroit repeuplé : comté, nom de l'endroit, code de l'endroit qui est particulier à chaque endroit et à partir duquel on peut déterminer la longitude et la latitude, nombre de poissons libérés, longueur moyenne à la fourche caudale, poids global, marques telles qu'étiquettes ou pinces fixées aux nageoires, espèce, description du stock, stage de développement et établissement piscicole ou agence de provenance.

## INTRODUCTION

Computer tabulated summaries of hatchery trout production and distribution in the provinces of Nova Scotia, New Brunswick and Prince Edward Island have been prepared for the years 1974 (Alexander 1975) and 1975 (Alexander 1976). The data base was subsequently expanded to include all fish species liberated by hatcheries operated by the Freshwater and Anadromous Division in 1976 (Alexander 1977) and 1977 (Alexander 1978). In 1976, new information was recorded and conversion was made to metric units. In 1981, production and distribution for 1978 and 1979 were included (Newbould 1981).

The present report summarizes distribution data in several forms for 1982 and provides detailed distribution data for each location stocked from 1976 to 1982.

## CODES AND ABBREVIATIONS

Because of limitations on space in the tables, it has been necessary to utilize abbreviations, codes or category words in a number of cases.

### DATE

All data are recorded in numerical form as: day/month/year.

### SPECIES

In Tables 1 and 2, the common name of each species distributed has been printed; but in Tables 3 and 4, these have been abbreviated as follows:

- S = Brook trout or speckled trout (Salvelinus fontinalis)
- R = Rainbow trout (Salmo gairdneri)
- N = Lake trout or togue or grey trout (Salvelinus namaycush)
- L = Landlocked Atlantic salmon (Salmo salar)
- A = Anadromous Atlantic salmon smolts (Salmo salar)
- J = Anadromous Atlantic salmon non-smolts (Salmo salar). Normally these fish will be juvenile Atlantic salmon not having reached the smolt stage, but post-smolt salmon would also be recorded under this species designation.
- TROUT = As used with species in Table 3, this includes: brook trout (S), rainbow trout (R), lake trout (N) and landlocked Atlantic salmon (L), but excludes all anadromous Atlantic salmon.
- SALMON = As used with species in Table 3, this includes both smolt (A)

and non-smolt (J) anadromous Atlantic salmon.

ALL = As used with species in Table 3, this refers to all salmonid species distributed by hatcheries of the Freshwater and Anadromous Division and the other agencies included in this report.

### STAGE

Developmental stage of salmonids distributed is abbreviated in all tables in a form consistent with past practice in the fish culture program as follows:

- D(d) - first two weeks after absorption of the yolk sac
- 1 - 2-8 weeks after absorption of yolk sac
- 2 - 8-14 weeks after absorption of yolk sac
- 3 - 14-20 weeks after absorption of yolk sac
- 4 - 20-26 weeks after absorption of yolk sac
- 5 - 26-52 weeks after absorption of yolk sac
- F(f) - 1-2 years from date of hatch
- G(g) - 2-3 years from date of hatch
- H(h) - 3 years or more from date of hatch.

### RELEASE SITES AND CATEGORIES

The name of each release site or location is listed under the heading "BODY OF WATER" in Table 4. Each release site has been assigned a unique numerical code, which can be used to obtain latitude and longitude of the site if required. Assignment and use of these code numbers has previously been described (Alexander 1975).

Release sites have also been categorized to permit additional summaries of the data in Table 3. Category words used with the term "RELEASE SITES" in the heading of Table 3, are defined as follows:

**PUBLIC:** Most release sites are classified as public. These sites are normally accessible to the public in general, and fish released are expected to be available to the public at some time after distribution.

**AQUACULTURE:** Permits have been issued under authority of the Minister of the Department of Fisheries and Oceans to individuals rearing salmonids for commercial purposes. Fish sold to these individuals are not normally

available for exploitation by the public.

**PRIVATE:** Small fish, surplus to the rearing requirements of the Freshwater and Anadromous Division, are available for sale to the public. These fish are to be distributed to private-water ponds, defined as: a body of water completely enclosed by land owned by the applicant and having no inlet or outlet off that property, or one in which the inflow and outflow is through a "pipe". No fish culture permit is required for this stocking and, although public access is not legally restricted, it is not readily available. These waters would not normally qualify for fish distribution under public-water stocking.

**RESEARCH:** Fish distributed to university and government laboratories for research and/or testing are not available to the public, and are therefore placed in this separate category. However, fish used in research programs but released in waters accessible to the public are categorized as public-water stocking.

**SPECIAL:** The Freshwater and Anadromous Division annually provides salmonids to the Fish and Wildlife Branch of the Department of Lands and Forests in Nova Scotia and to the Fish and Wildlife Branch of the Department of Natural Resources in New Brunswick. Although these fish may eventually be used for public-water stocking, both agencies operate rearing facilities where fish may be held for a period of several days to many months prior to final distribution. The final destination of these stocks is controlled by the provincial agencies. From 1976 to 1980, these fish have been categorized as "SPECIAL" distributions when leaving the culture facilities of the Freshwater and Anadromous Division. In 1981 and 1982 the Nova Scotia Department of Lands and Forests, New Brunswick Department of Natural Resources and the North American Salmon Research Centre have provided detailed stocking information for these fish leaving their facilities.

#### MARK

This information is provided in Table 4 for each distribution to each location. Code numbers used for marks on fish distributed during 1976-79 are interpreted as follows:

01 - unknown or uncertain at the time of record. Since the recording of marking data was new to fish culture personnel in 1976, some uncertainties resulted. This code was provided in order to reduce the chance of erroneous

records but is used sparingly after 1976.

- 02 - no mark or tag.
- 03 - adipose fin clip only.
- 04 - right pelvic fin clip only.
- 05 - left pelvic fin clip only.
- 07 - adipose and right pelvic fin clips.
- 08 - adipose and left pelvic fin clips.
- 10 - right pectoral fin clip only.
- 11 - left pectoral fin clip only.
- 13 - adipose and right pectoral fin clips.
- 16 - numbered jaw tag only.
- 21 - adipose fin clip and Carlin tag.
- 23 - magnetic nose tag and adipose fin clip.
- 24 - magnetic nose tag plus Carlin tag and adipose fin clip.
- 25 - adipose and left pelvic fin clips, plus jaw tag.
- 26 - adipose and right pelvic fin clips, plus jaw tag.
- 27 - left pelvic fin clip, plus Carlin tag.
- 28 - left pectoral fin clip, plus jaw tag.

#### STOCK

In Table 4, stock description has been shown for each location as a three-digit numerical code after species. The stock description is provided (Appendix) for each code used in this record.

#### RESULTS

The 1982 salmonid distributions are summarized in several forms (Tables 1-3). Detailed information on salmonid distributions to all locations is also provided in an orderly form for 1976-82 (Table 4). Table titles and sub-titles, viewed in light of the information provided on codes and abbreviations, are considered to be self-explanatory.

## APPENDIX

STOCK DESCRIPTION FOR CODES USED IN REFERENCE TO SALMONID DISTRIBUTIONS FROM HATCHERIES OPERATED BY THE FRESHWATER AND ANADROMOUS DIVISION FISHERIES RESEARCH BRANCH, 1976-82

Code	Stock description
001	Fall-spawning rainbow trout reared from imported eggs.
002	Fall-spawning rainbow trout reared from eggs produced by stock held in Fisheries Research Branch hatchery.
003	Spring-spawning rainbow trout reared from eggs produced by stock maintained at Cobequid Hatchery.
004	Spring-spawning rainbow trout reared from eggs produced by wild rainbow trout collected from streams on Prince Edward Island.
005	Domestic stock - Antigonish brook trout.
006	Domestic stock - Saint John brook trout.
007	Brown trout reared from imported (U.S.) stock.
008	Brown trout reared from broodstock at Cobequid Hatchery.
009	Brook trout reared from eggs produced by wild trout collected from streams near Saint John Hatchery.
010	Brook trout hybrids - F1 generation produced by crossing domestic females with wild males from Flat Lake, Nova Scotia.
011	Brook trout - Domestic (Antigonish) stock from eggs produced by broodstock maintained at Yarmouth Hatchery.
012	Brook trout hybrids - F2B generation produced by progeny of domestic female x Flat Lake male mating.
013	Brook trout hybrids - produced by crossing domestic females with wild sea-run males collected from East River, Sheet Harbour, Nova Scotia.
014	Speckled trout hybrids - F1 generation produced by crossing domestic females with wild males from Hughies Lake, Nova Scotia.
015	Brook trout, OHIO STRAIN, from White Sulphur Springs, W. Va.,
	U.S.A., slow-growing strain.
016	Wild sea-run brook trout Morell River, P.E.I., fall 1978.
018	Brook trout from eggs produced by broodstock held at Miramichi Hatchery.
019	Erwin, Tennessee, fall-spawning rainbow trout.
020	Brook trout - Antigonish Hatchery domestic eggs raised at Margaree Hatchery and crossed with wild trout from Ingram Brook.
021	Brook trout - progeny of Antigonish domestic eggs raised at Margaree Hatchery.
022	Brook trout hybrids - F2C generation produced by progeny of domestic male and mixed (Hughie and Flat lakes) females.
023	Brook trout hybrids - F2A generation produced by progeny of hybrid mixed (Hughie and Flat lakes) males and females.
024	Rainbow trout - White Sulphur Springs - reared at Coldbrook Hatchery and transferred to Kelly Lake (Nova Scotia Lands and Forests).
030	Grand Lake brook trout (New Brunswick Department of Natural Resources).
031	Grand Lake brook trout (New Brunswick Department of Natural Resources) - accelerated growth by thermal rearing.
032	Grand Lake brook trout (New Brunswick Department of Natural Resources) - hybrid (Assenica x Phillips).
100	Lake trout, from eggs produced by wild lake trout collected at Baker Lake, New Brunswick.
101	Lake trout, produced from eggs imported from domesticated stocks held in U.S.A. - Marquette State Hatchery, Michigan.
102	Lake trout from eggs produced by Chamcook Lake stock.
200	Grand Lake lake trout (New Brunswick Department of Natural Resources).
125	Landlocked salmon, produced from eggs imported from American sources.
126	Landlocked salmon, from eggs produced by wild stocks collected from Long Lake, New Brunswick.

127	Landlocked salmon, from eggs produced by wild stocks collected from Magaguadavic Lake, N.B.	240	West River Sheet Harbour - early run.
150	Grand Lake landlocked salmon (New Brunswick Department of Natural Resources).	241	West River Sheet Harbour - summer run.
200	East River St. Mary's - early run.	242	West River Sheet Harbour - late run.
201	East River St. Mary's - summer run.	243	West River Sheet Harbour - mixed runs.
202	East River St. Mary's - late run.	260	Main LaHave River - early run.
203	East River St. Mary's - mixed run.	261	Main LaHave River - summer run.
204	East River St. Mary's x East River Sheet Harbour.	262	Main LaHave River - late run.
205	West River St. Mary's - early run.	263	Main LaHave River - mixed run.
206	West River St. Mary's - summer run.	265	North Branch LaHave River - early run.
207	West River St. Mary's - late run.	266	North Branch LaHave River - summer run.
208	West River St. Mary's - mixed run.	267	North Branch LaHave River - late run.
209	West River St. Mary's x East River Sheet Harbour.	268	North Branch LaHave River - mixed run.
