Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Schubert, N.D. 1986. The Indian food fishery of the Fraser River: 1985 summary. Can. Data Rep. Fish. Aquat. Sci. 560: 80 p.

Weekly effort levels and catches of the five species of Pacific salmon, steelhead trout and sturgeon are reported for 23 fishing areas in the Fraser River Indian food fishery. The aggregate salmonid catch of 563,186 was the highest on record. Catch by species totalled 10,895 chinook, 102,292 pink, 424,499 sockeye, 18,181 coho, 5,859 chum, 1,460 steelhead and 1,112 sturgeon. The 1985 management plan addressed conservation concerns for early and middle timing chinook and early Stuart sockeye stocks.

Key words: effort, catch, Fraser River, Indian food fishery, conservation.

RÉSUMÉ

Schubert, N.D. 1986. The Indian food fishery of the Fraser River: 1985 summary. Can. Data Rep. Fish. Aquat. Sci. 560: 80 p.

On présente les taux hebdomadiers d'effort et de prises pour les cinq espèces de saumon, la truite arc-en-ciel anadrome et l'esturgeon capturés dans 23 zones d'exploitation autochtone du fleuve Fraser. Les prises totales de 563,186 poissons sont les quatrièmes jamais enregistrées. Les prises sont réparties par espèce comme suit: 10,895 quinnats, 102,292 rouges, 424,499 rose, 18,181 cohos, 5,859 kétas, 1,460 truites arc-en-ciel anadromes et 1,112 esturgeons. Le plan gestionnel de 1985 traitait des préoccupations en matière de conservation des stocks de saumon quinnat qui remontent au début et au milieu de la saison et de saumon rouge de la rivière Stuart qui remontent tôt.

Mots-clés: effort de pêche, prises, fleuve Fraser, pêche de subsistance indienne, conservation des stocks de saumon.

INTRODUCTION

The annual documentation of fishery management strategies and the results of those strategies is an important component in the ongoing development of management capabilities. Such documentation was recently completed for the Fraser River Indian food fishery for the period 1951 through 1984 (Schubert 1983, 1984, 1985). This report continues that process for the 1985 fishing season. Summarized below are the 1985 management plan, weekly effort levels, and weekly catches of the five species of Pacific salmon, steelhead trout and sturgeon in the twenty-three major fishing areas of the Fraser River Indian food fishery.

FISHING AREAS

The major fishing areas of the Fraser River Indian food fishery and the gear types used in each area are described briefly below. The approximate distance in kilometers from Steveston is bracketed, and the dominant features which delineate fishing areas are shown in Fig. 1.

Steveston Area (below 9.6 km). The main arm of the Fraser River downstream from the westerly end of Deas Island, including Canoe Pass, Ladner Reach and Sea Reach; and the North Arm of the Fraser River from the Knight Street Bridge downstream to 0.9 km off the west end of the North Arm jetty. Drifted gill nets are the only gear used in this area.

Deas Island (9.6 km) to Mission (75 km). The main arm of the Fraser River from the westerly end of Deas Island upstream to Mission; and the North Arm of the Fraser River upstream from the Knight Street Bridge. Set gill nets are the primary gear used in this area; however, in some years the Semiahmoo and Katzie bands conduct a supervised drifted gill net fishery near Barnston Island. These special

permit fisheries are conducted with commercial gear and fish to a previously agreed quota. In 1985, special permit fisheries occurred during the weeks of August 18 and 25.

Mission (75 km) to Hope (151 km). This area is divided into north side and south side subareas which are monitored by the Mission and Chilliwack subdistricts respectively. Set gill nets are the only gear used in this fishing area.

Hope (151 km) to North Bend (206 km). Set gill nets are the only gear used in this area. The area includes a permanently closed section of river extending from a point 6.5 km south of North Bend downstream to Williams Creek, 2.8 km south of Hell's Gate. This closure provides protection from harvest at the Hell's Gate obstruction.

North Bend (206 km) to Texas Creek (280 km). This area was expanded in 1976 to include the section from Lytton upstream to Texas Creek (280 km). Both set gill nets and dip nets are used in this area.

Texas Creek (280 km) to Churn Creek (430 km). Both set gill nets and dip nets are used in this area.

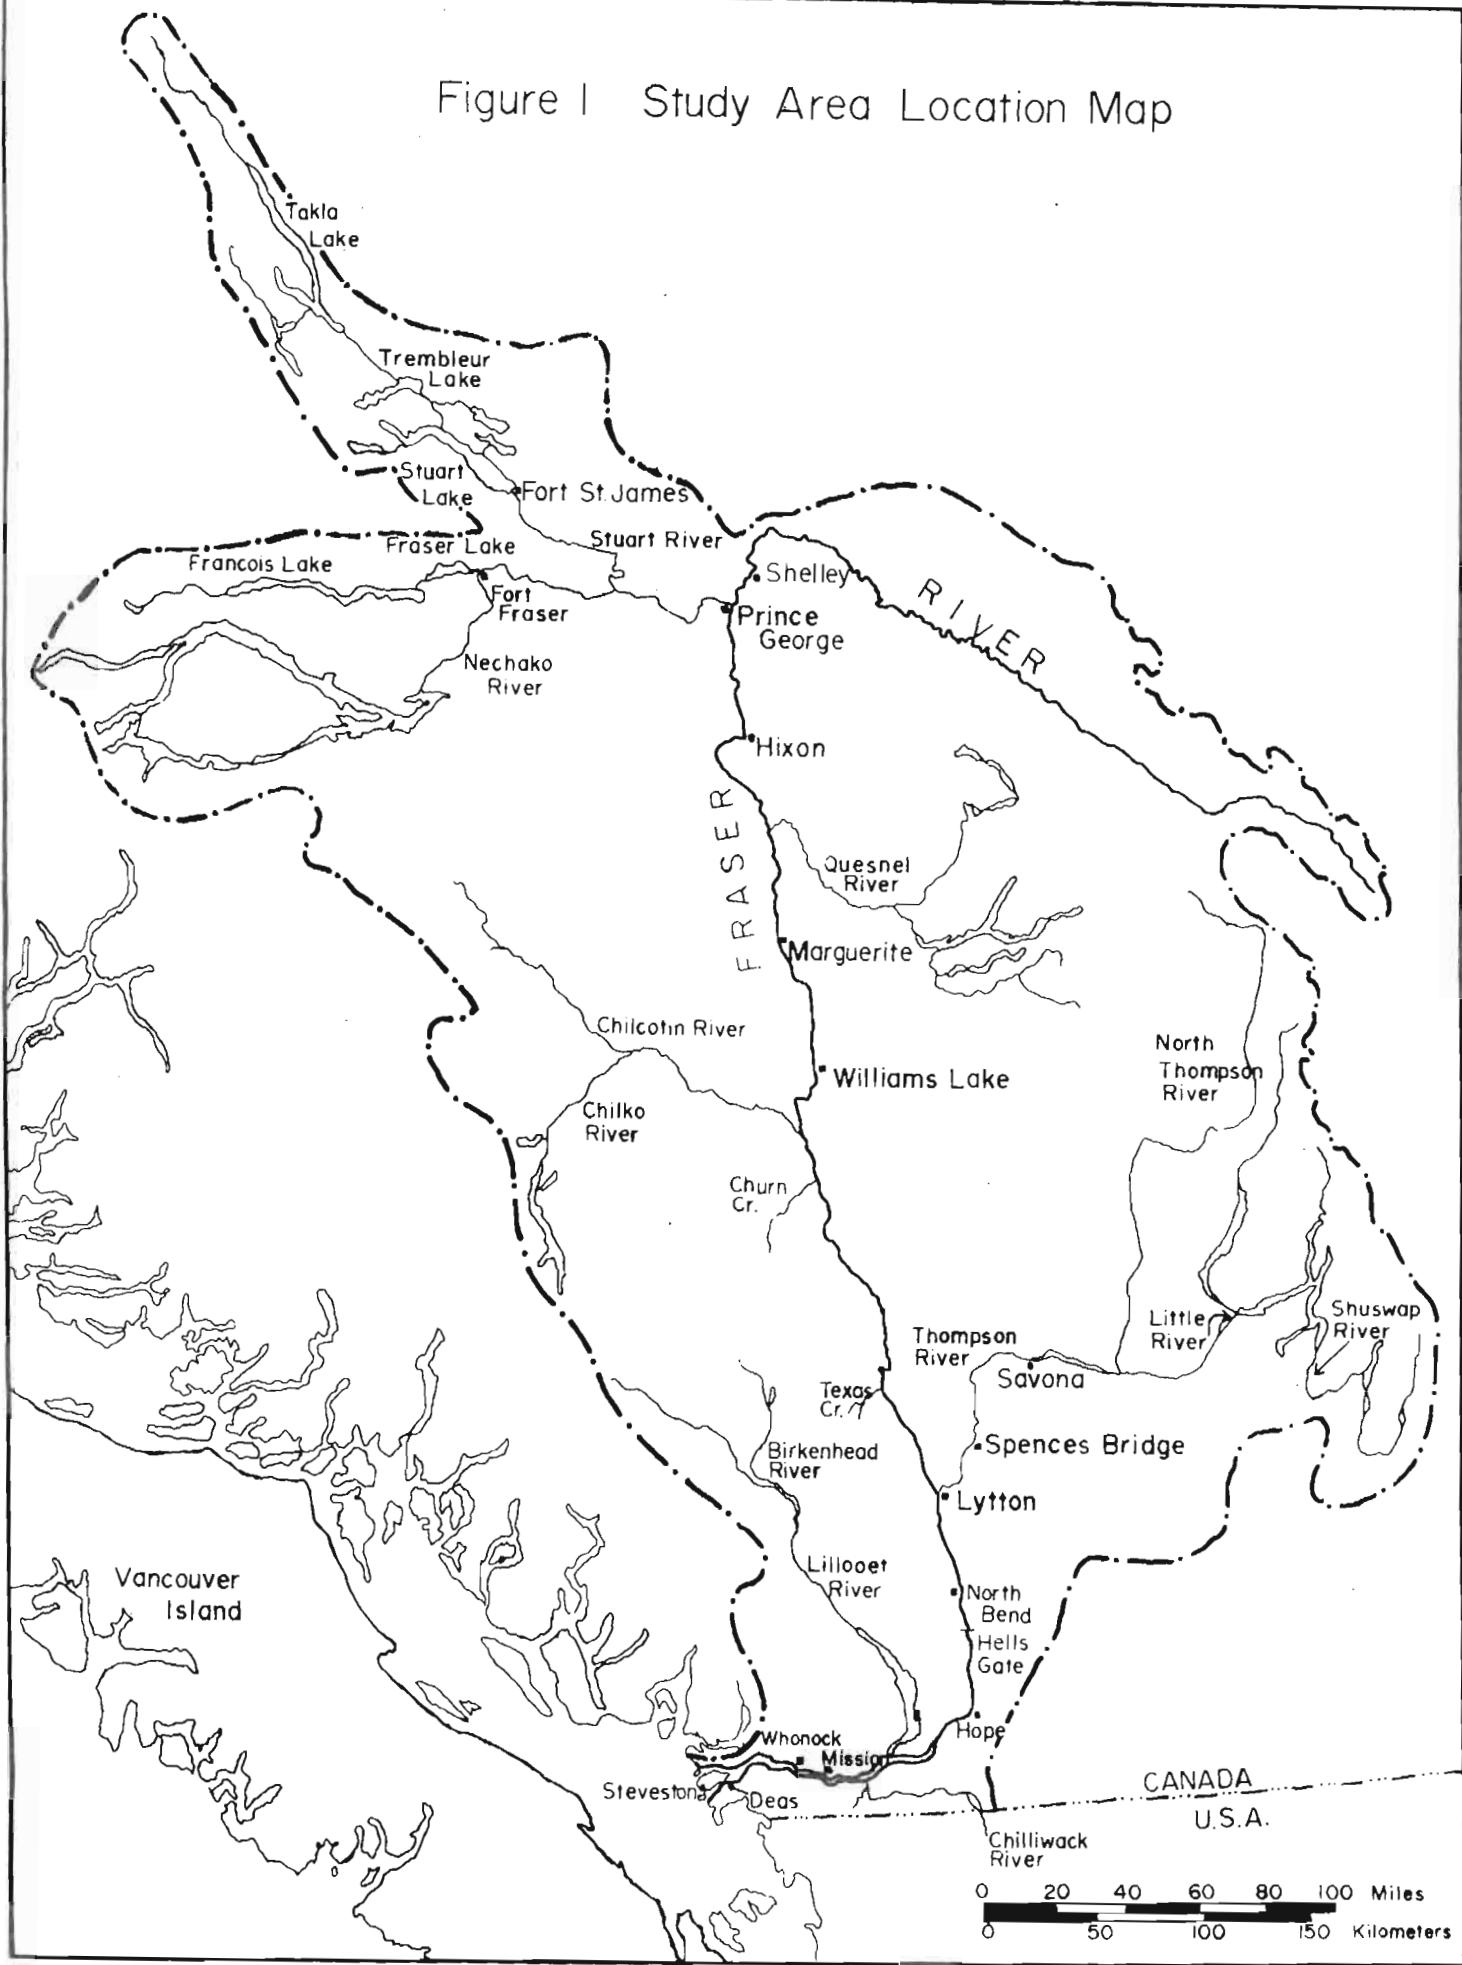

Churn Creek (430 km) to Chilcotin Bridge (491 km). This area extends from the Churn Creek confluence upstream to the Chilcotin Bridge (also known as the Sheep Creek Bridge), southwest of Williams Lake. Dip nets are the only gear used in this area.

Chilcotin Bridge (491 km) to Marguerite (552 km). Dip nets are the only gear used in this area.

Marguerite (552 km) to Hixon (689 km). Dip nets are the only gear used in this area.

Above Hixon (689 km) This

Figure 1 Study Area Location Map

fishery occurs in the Fraser River primarily between Hixon and Prince George (768 km), although a minor fishery also occurs at Shelley (773 km). There are no fisheries in the Fraser River mainstem upstream from Shelley. Set gill nets are the only gear used in this area.

Nechako River System. The Nechako system has been divided into six subareas (note: set gill nets are used in all areas):

- Nechako River, from Prince George (768 km) to the Stuart River confluence (855 km).
- Nechako River, from Stuart River (855 km) to Fort Fraser (958 km), and in the Nautley River at the outlet of Fraser Lake.
- Fraser Lake outlet (958 km) to Francois Lake (990 km). Fishing occurs along the foreshore of Fraser Lake off the reserves at Lejac and the Fraser Lake town site, and in the lower 200 m of the Stellako River.
- Stuart River, from the Stuart River mouth (855 km) to Fort St. James (967 km). The most intensive fishery occurs at the outlet of Stuart Lake.
- Stuart River system, from Fort St. James (967 km) to Trembleur Lake (1035 km). Fisheries in this area occur in the Tachie River at Grand Rapids and off the Tachie River mouth.
- Above the Trembleur Lake outlet (1035 km). Fisheries in this area occur at the Middle River mouth.

Chilcotin River System. This fishery occurs primarily in the Chilcotin River, from the mouth (460 km) upstream to the Chilko River confluence, and in the Chilko River upstream to Henry's Crossing (628 km). Dip nets are the predominant gear; however, a

small gaff fishery exists in the Chilko River.

Thompson River System. There are two active fisheries in the Thompson River system:

- Main Thompson River, from Lytton (254 km) to Savona (368 km). Both set gill nets and dip nets are used in this area.
- The Shuswap River, located on the spawning grounds between the Islands (610 km) and Skookumchuk Rapids (653 km). This is a spear and gaff fishery which harvests spawned-out sockeye and chinook salmon.

Harrison/Lillooet River System. The Harrison/Lillooet system has been divided into three subareas:

- Harrison River mainstem (102 km to 121 km). Both set gill nets and spears are used in this subarea.
- Lower Lillooet River, from the head of Harrison Lake (182 km) to the Lillooet Lake outlet (240 km). Set gill nets are used in this subarea.
- Birkenhead River (268 km). This subarea includes a set gill net fishery at the upper end of Lillooet Lake, and a gaff fishery in the Birkenhead River.

DATA SOURCES

Estimates of catch and effort in the Indian food fishery are compiled on a weekly basis by local fishery officers. Assessment methodologies are sensitive to local fishery conditions and budgetary allocations and, as a result, vary from area to area and within areas through the year. Gear counts may be obtained during ground, river or aerial

surveys, while catch per net may be derived from interviews with the fishermen, direct observation or gear subsamples. Although methods vary, each fishery is generally surveyed one or more times during each weekly open period. Catches are recorded from a proportion of the nets, and total catch for that opening is estimated by applying the observed catch per net to the total gear count.

MANAGEMENT PROCEDURE

The Indian food fishery in the Fraser River is regulated in order to provide a level of access to the available salmon resource sufficient to satisfy the reasonable food fish needs of each band while, at the same time, addressing the conservation requirements of the resource. In the absence of requests from local bands for catch quotas derived on the basis of reasonable food fish needs, a pattern of regulation has evolved which addresses fishery specific variations in stock abundance, gear efficiency and site effectiveness by varying between areas the duration of the weekly fishery. For example, the fishery in the lower Fraser River is limited to three days per week because virtually every Fraser River stock is vulnerable to a gear well suited to the local river morphology. In contrast, the fishery in the Cariboo area (Churn Creek to Hixon, Chilcotin River system) is open seven days per week in recognition of the temporally and numerically limited stock availability, the relatively inefficient gear type traditionally used in the fishery, and the limited availability of effective fishing sites. The basic fishing plan for the Fraser River Indian food fishery, which has been largely unchanged since 1962, is detailed in Appendix 2.

This basic fishing plan may be altered if preseason stock expectations, developed by biologists of the

Department of Fisheries and Oceans (chinook, coho and chum salmon) and the International Pacific Salmon Fisheries Commission (IPSFC) (sockeye and pink salmon) project a conservation concern for any stock. In that case, the basic plan is modified in order to address the specific conservation concern, and meetings are scheduled with the appropriate bands and tribal councils to discuss any changes. The finalized preseason plan will then be altered only to address emergency in-season conservation concerns.

The consultative process was simplified by the formation in 1985 of the Interior Indian Fisheries Commission (IIFC), a "formal consultative body for Indian fishing interest ... to enable Indians to become directly involved in management and enhancement" (Pearse 1982). The IIFC consists of two representatives from each of ten tribal councils: Carrier-Sekani Tribal Council, Cariboo Tribal Council, Chilcotin - Ulkatcho - Kluskus Nation, Lillooet Tribal Council, Nlaka'Pamux Tribal Council, Okanagan Tribal Council, Shuswap Nation Tribal Council, Kootenay Indian Area Council, Sto:Lo Nation, and Sto:Lo Tribal Council. The IIFC represents Indian fishing interests in virtually the entire Fraser River watershed and has become the main consultative group for this fishery.

1985 PRESEASON MANAGEMENT PLAN

The preseason management plan developed for the 1985 Fraser River Indian food fishery focused on the conservation of early and middle timing chinook stocks. Two specific measures were implemented to address chinook conservation concerns. First, fishing times in the major chinook interception areas downstream from Williams Creek (near Boston Bar) were reduced to one day per week until late June. This measure was intended to reduce the harvest of early timing chinook stocks in fisheries which target spec-

ifically on chinook salmon. Second, a maximum gill net mesh size restriction of 140 mm (5.5 inches) was imposed after the arrival of sockeye to reduce incidental interceptions of middle timing chinook stocks during the fisheries which target on sockeye salmon. This restriction was removed in mid September to permit the use of larger mesh nets during the chum migration period. The 1985 preseason management plan is detailed in Appendix 3.

1985 FINAL MANAGEMENT PLAN

The 1985 preseason management plan was modified inseason in response to an emergency request from the IPSFC for a closure required to conserve early Stuart sockeye salmon. In most areas, the food fishery was closed for two weeks; however, a normal fishery was permitted in the Stuart River system. This closure complemented restrictions to all other user groups to provide the early Stuart stock almost total protection from directed harvest.

No other changes were made to the 1985 management plan. The final 1985 management plan is detailed in Appendix 4.

1985 CATCH

Catches in the Fraser River Indian food fishery during 1985 are reported in detail in Appendices 5 and 6 and are summarized in Tables 1 and 2. The aggregate salmonid catch totalled approximately 563,200, the highest on record (Table 1). The bulk of the catch was taken in three areas: Mission to Hope (22%), Hope to North Bend (31%) and North Bend to Churn Creek (18%).

Sockeye were predominant with a catch of approximately 424,500 taken in 1985. The pink catch totalled approximately 102,300, the largest ever recorded in this fishery.

Catches of coho, chum, steelhead and sturgeon totalled 18,200, 5,900, 1,500 and 1,100 respectively. Catches of the later timing stocks were generally low due to poor fishing conditions resulting from high water levels beginning in mid October, immediately followed by low flows and river ice from mid November through the end of the fishing season.

APPENDIX 2. SCHEDULE OF STANDARD OPEN PERIODS IN THE FRASER RIVER INDIAN FOOD FISHERY.

LOCATION	FISHERY OPENING		GEAR TYPE
	DAYS/WEEK	STANDARD TIMES	
*BELOW DEAS ISLAND (INCLUDING CANOE PASS, LADNER AND SEA REACH, AND THE NORTH ARM FROM KNIGHT STREET BRIDGE DOWNSTREAM TO 0.9 KM OFF THE WEST END OF THE NORTH ARM JETTY)	1.5	1200 FRI TO 2400 SAT	DRIFTED GILL NET
DEAS ISLAND (9.6 KM) TO MISSION BRIDGE (75 KM)	3.0	1200 MON TO 1200 THURS	SET GILL NET
MISSION BRIDGE (75 KM) TO WILLIAMS CREEK (192 KM), INCLUDING THE HARRISON RIVER.	3.0	1200 THURS TO 1200 SUN	SET GILL NET
WILLIAMS CREEK (192 KM) TO PETCH CREEK (200 KM)	0.0	PERMANENTLY CLOSED (HELL'S GATE)	-
PETCH CREEK (200 KM) TO TEXAS CREEK (280 KM), INCLUDING THOMPSON AND SHUSWAP RIVERS	4.0	0001 THURS TO 2400 SUN	SET GILL NET AND DIP NET (EXCEPT SPEARS AND GAFFS IN SHUSWAP RIVER)
TEXAS CREEK (280 KM) TO CHURN CREEK (430 KM)	4.0	0001 MON TO 2400 THURS	SET GILL NET AND DIP NET
CHURN CREEK (430 KM) TO HIXON (689 KM), INCLUDING CHILCOTIN RIVER	7.0	OPEN	DIP NET
ABOVE HIXON, INCLUDING NECHAKO RIVER SYSTEM	5.0	1200 MON TO 1200 SAT	SET GILL NET
LILLOOET RIVER SYSTEM	7.0	OPEN	SET GILL NET

* EXPERIMENTAL FISHERY FIRST IMPLEMENTED IN 1978; ALL OTHER FISHING PERIODS (DAYS PER WEEK) UNCHANGED SINCE 1962.

APPENDIX 3. 1985 PRESEASON MANAGEMENT PLAN FOR THE FRASER RIVER INDIAN FOOD FISHERY.

(i) FISHING TIMES.

LOCATION	OPENING			REASON FOR RESTRICTION*
