Canadian Industry Report of Fisheries and Aquatic Sciences

Industry reports contain the results of research and development useful to industry for either immediate or future application. They are directed primarily toward individuals in the primary and secondary sectors of the fishing and marine industries. No restriction is placed on subject matter and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Industry reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-91 in this series were issued as Project Reports of the Industrial Development Branch, Technical Reports of the Industrial Development Branch, and Technical Reports of the Fisherman's Service Branch. Numbers 92-110 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Industry Reports. The current series name was changed with report number 111.

Industry reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport canadien à l'industrie sur les sciences halieutiques et aquatiques

Les rapports à l'industrie contiennent les résultats des activités de recherche et de développement qui peuvent être utiles à l'industrie pour des applications immédiates ou futures. Ils sont surtout destinés aux membres des secteurs primaire et secondaire de l'industrie des pêches et de la mer. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports à l'industrie peuvent être cités comme des publications complètes. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports à l'industrie sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 91 de cette série ont été publiés à titre de rapports sur les travaux de la Direction du développement industriel, de rapports techniques de la Direction du développement industriel, et de rapports techniques de la Direction des services aux pêcheurs. Les numéros 92 à 110 sont parus à titre de rapports à l'industrie du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 111.

Les rapports à l'industrie sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Cruikshank, D.R. 1987. Temperature profiles for 21 lakes in the Experimental Lakes Area, northwestern Ontario, 1986. Can. Data Rep. Fish. Aquat. Sci. 648: iv + 36 p.

This report presents 250 temperature profiles from 21 lakes in the Experimental Lakes Area in northwestern Ontario. Also included are data on weather descriptions, Secchi depths, water colour, planar thermoclines and epilimnion depths.

Key words: temperature profiles; thermocline; experimental lakes; Secchi disk.

RÉSUMÉ

Cruikshank, D.R. 1987. Temperature profiles for 21 lakes in the Experimental Lakes Area, northwestern Ontario, 1986. Can. Data Rep. Fish. Aquat. Sci. 648: iv + 36 p.

Le présent rapport présente 250 profils de température de 21 lacs de la Région des Lacs Expérimentaux dans le nord-ouest de l'Ontario. Il comprend aussi des données sur la description du temps, les profondeurs de secchi, la couleur de l'eau, les thermoclines planaires, et la profondeur de l'épilimnion.

Mots-clés: profiles de température; thermocline; lacs expérimentaux; disques de Secchi.

INTRODUCTION

This report is the fourth in a series of data reports dealing with lake temperature profiles at the Experimental Lakes Area (ELA). Temperature data from 1968-1983 for 39 lakes were presented by Cruikshank (1984a), for 1984 by Lyng and Cruikshank (1985) and for 1985 by Cruikshank (1986). In this report, 250 temperature profiles for 21 lakes during the 1986 ice-free season are presented in tabular (Appendix 1) form. Additional information such as weather descriptions, water colour and Secchi depths are presented when available (Appendix 2).

In most years, ELA lakes begin to stratify by early to mid-May with stable summer thermal regimes appearing by early June and disappearing by mid September (Cruikshank 1984b). The majority of ELA lakes do not completely overturn in spring, others have only fall overturns. Thermal homogeneity in the fall may occur up to two weeks before chemical homogeneity. The time factor could be an artifact of the bi-weekly sampling schedule and not necessarily real.

METHODS

In 1986, all temperature profiles were taken using a Flett Research Mark II Digital Telethermometer. All readings have been corrected using a calibration curve that was calculated using a mercury thermometer (0.05°C accuracy). Profiles were obtained by starting at the lake surface and taking temperature readings at one metre intervals. If the temperature difference between successive metre depths exceeded 1°C , measurements were taken every quarter metre until the difference between metre depths was less than 1°C .

Inflow, outflow and air temperatures were taken with a pocket thermometer (1°C accuracy). Weather descriptions such as wind speed and cloud cover were subjective and may vary between observers. Secchi depths were measured on the shadow side of the boat during the morning. The Secchi disk was lowered until it disappeared and then raised up until it reappeared. The mean of the two depths was recorded as the Secchi disk reading. Water colour was a subjective measurement defined as the colour of water against the white background of the Secchi disk at $1/2$ the recorded Secchi depth. Epilimnion depth is defined as that point in the water column where temperature began to decrease at a rate greater than 1°C per metre. Planar thermocline is defined as that point where the change in temperature per metre depth was greatest.

All calculations and printouts were done by a Hewlett Packard Model 87XM computer.

ACKNOWLEDGMENTS

I would like to thank Tim Cooper and Doug Heywood who assisted me in the collection of

field data for 1986. I would also like to thank Susan Kasian for her computer programming assistance and Donna Laroque who typed this report.
