Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Spilsted, B.P. and G. Hudson. 1994. A summary of coded wire tag recovery information from northern B.C. and Alaskan commercial fisheries for the years 1987 to 1992 for coho tagged within the Skeena River watershed. Can. Data Rep. Fish. Aquat. Sci. 944: 96 p.

Estimated adjusted coded wire tag (CWT) recovery data for 3-year age class coho salmon (*Oncorhynchus kisutch*) tagged in lower Skeena River (Thornhill Creek/Eby Street, Terrace) and upper Skeena River (Kispiox River, Toboggan Creek, Fort Babine, Fulton River) locations is provided by statistical week. The data summarizes 1987 to 1992 recovery years (1984 to 1989 brood years) from commercial gillnet, seine and troll fisheries operating in Alaska and northern British Columbia. Alaskan CWT recoveries are organized using geographic recovery area and gear type criteria, and include N.W. Alaska troll, N.E. Alaska troll, S.W. Alaska troll, Alaska seine, S.E. Alaska troll and Alaska gillnet. Canadian CWT recoveries are organized in a similar manner and include Statistical Areas 1, 3 and 4 troll and net (gillnet + seine) groupings.

RÉSUMÉ

Spilsted, B.P. and G. Hudson. 1994. A summary of coded wire tag recovery information from northern B.C. and Alaskan commercial fisheries for the years 1987 to 1992 for coho tagged within the Skeena River watershed. Can. Data Rep. Fish. Aquat. Sci. 944: 96 p.

L'estimation des données ajustées obtenues par récupération des micromarques codées implantées dans des saumons cohos (*Oncorhynchus kisutch*) pour la classe d'âge 3 et marqués dans la partie aval du Skeena (Thornhill Creek/Eby Street, Terrace) et dans la partie amont du Skeena (rivière Kispiox, ruisseau Toboggan, Fort Babine, rivière Fulton) est fournie par semaine statistique. Les données résument les résultats de la période de récupération de 1987 à 1992 (années de ponte 1984 à 1989) pour les pêches commerciales au filet maillant, à la senne coulissante et à la traîne de l'Alaska et du nord de la Colombie-Britannique. En Alaska, la récupération des micromarques est présentée par secteur géographique et par type d'engin, et touche la pêche à la traîne dans le nord-ouest, le nord-est et le sud-ouest de l'Alaska, la pêche à la senne en Alaska, la pêche à la traîne dans le sud-est de l'Alaska et la pêche au filet maillant en Alaska. À l'échelle du Canada, les récupérations des micromarques sont organisées de la même manière et concernent la pêche à la traîne et au filet (filet maillant et senne coulissante) dans les zones statistiques 1, 3 et 4.

INTRODUCTION

This report documents 1987 to 1992 estimated adjusted coded wire tag (CWT) weekly recovery data from northern British Columbia and Alaska commercial gillnet, seine and troll fisheries for 3-year age class coho salmon originating from the Skeena River watershed (1984 to 1989 brood years). The data provided has been retrieved from the Pacific Biological Station (P.B.S.) Mark Recovery Program (MRP) database. Kuhn et al. (1988) provide an introduction to the MRP and its associated database and Kuhn (1988) documents the concepts and methods of the MRP-Reporter Program which creates CWT reports based on selection criteria specified by a user.

Coho tag sites (recovery groups) within the Skeena watershed are separated geographically for this analysis. Lower Skeena sites include Thornhill Creek (also known as Eby Street) and Terrace; upper Skeena sites include Kispiox River, Toboggan Creek, Fort Babine and Fulton River. Alaskan CWT recoveries are organized using geographic recovery area and gear type criteria, and include N.W. Alaska troll, N.E. Alaska troll, S.W. Alaska troll, Alaska seine, S.E. Alaska troll and Alaska gillnet. Canadian CWT recoveries are organized in a similar manner and include Statistical Areas 1, 3 and 4 troll and net (gillnet + seine) groupings. Data tables include recoveries for all locations in British Columbia and Alaska and for all gear types.

An electronic copy of the data is available from the D.F.O. Management Biology Unit in Prince Rupert. Associated papers currently at press include information on northern B.C. commercial coho catch data (Spilsted, 1994a) and analysis of coded wire tag recovery information of Skeena origin coho from northern B.C. commercial fisheries (Spilsted, 1994b).

METHODS

Recovery information used in this report employs "estimated" and "adjusted" data-type criteria rather than "observed" data, which only represents actual pin recoveries.

Adjusted Recovery

An "adjusted" recovery takes into account lost pin, no pin and no data recoveries. When a non-tag recovery occurs in a given stratum, it can be associated with the real tags in the stratum. The incidence of non-tags in commercial sampling is however relatively low.

Observed data can be "adjusted" using the following calculation:

$$A = O \times \left[1 + \frac{LP}{K} + \frac{ND \times (K + LP)}{K \times (K + LP + NP)} \right]$$

where:

A = "observed" recovery adjusted for non-tags.

O = "observed" recovery.

K = number of known (real) tag codes recovered for a particular stratum.

LP = number of "lost pin" recoveries for a particular stratum.

ND = number of "no data" recoveries for a particular stratum.

NP = number of "no pin" recoveries for a particular stratum.

Estimated Recovery.

An "estimated" recovery is the estimated number of tags of a particular code recovered within a stratum, which accounts for varied sampling rates by expansion of the adjusted number of recoveries by the ratio of catch to sample size. "Estimated" data is calculated by the following formula:

$$E = A \times \frac{C}{S}$$

where:

E = the estimated number of recoveries of a particular tag code within a recovery stratum.

A = the adjusted recoveries.

C = the catch for the stratum.

S = the sample size for the stratum.

Tag Groups.

Abbreviations for the various tag groups have been used within this report. The Skeena tag groups and their abbreviations are as follows; lower Skeena: Thornhill Creek/also known as Eby Street (EBY) and Terrace (TER); upper Skeena: Kispiox River

(KIS), Toboggan Creek (TOB), Fort Babine (FB) and Fulton River (FUL).

Statistical Areas.

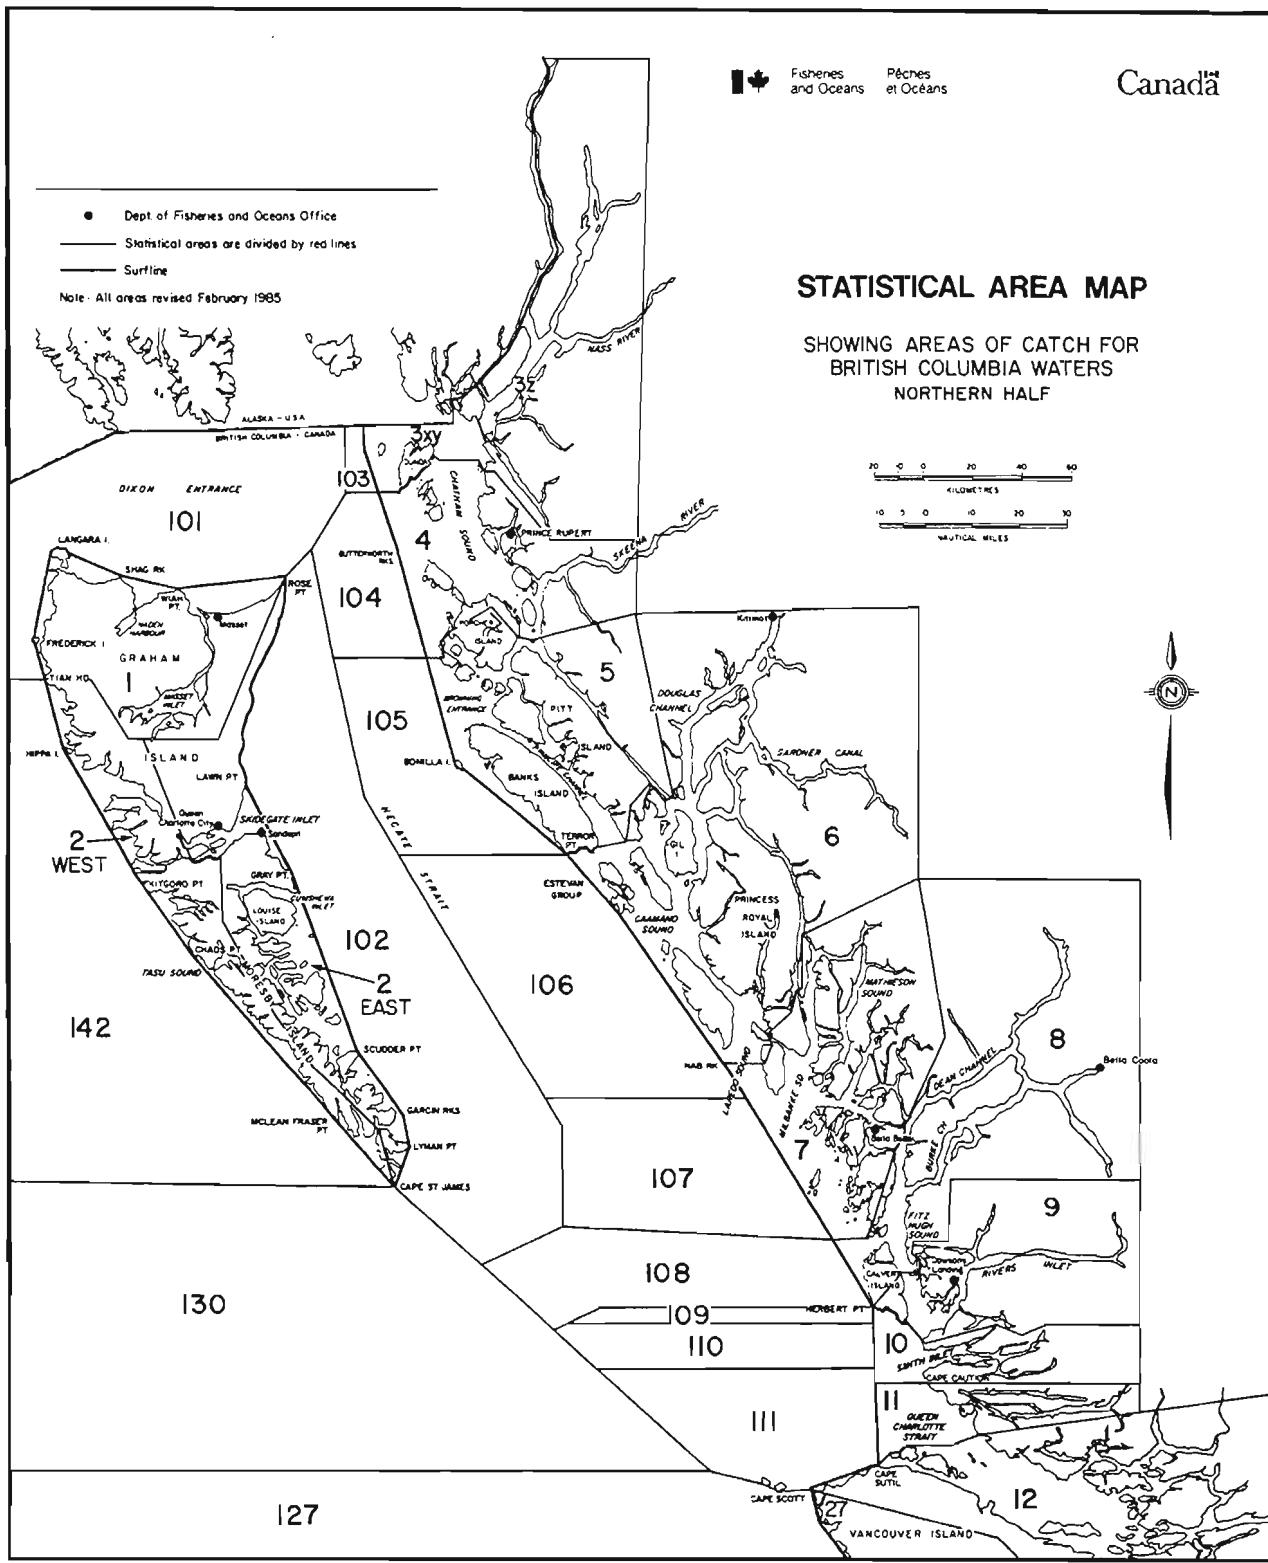

Data tables include statistical area information for both northern British Columbia (Fig. 1) and Alaska (Fig. 2) recovery locations. Alaskan statistical area codes are preceded by the letter "A", for example "A101" refers to Alaskan statistical area 101. The letter "G" or "S" follow the area number, denoting gillnet or seine recovery gear type (eg. "A101S"). "ANW" refers to statistical areas encompassing northwest Alaska waters. Canadian statistical area codes are preceded by the number "0", for example "003" refers to Canadian statistical area 3. Canadian codes which have a two digit number following the "0" indicate that a tag recovery location can only be associated with a combined catch region and will include more than one statistical area (SA). The combined recovery locations are noted in brackets in the recovery area column of the data table.

Recovery Areas.

Charts and data summaries of weekly recoveries of Skeena origin tagged coho present data in the following geographic and gear type groupings: NW Alaska Troll (AKNWTR), NE Alaska Troll (AKNETR), SW Alaska Troll (AKSWTR), Alaska Seine (AKSN), SE Alaska Troll (AKSETR), Alaska Gillnet (AKGN), Area 1 Troll (AREA1TR), Area 1 Net (AREA1N), Area 3 Troll (AREA3TR), Area 3 Net (AREA3N), Area 4 Troll (AREA4TR), and Area 4 Net (AREA4N). Only data with a specific location designation for one of these groupings was used to generate the CWT recovery histograms. Data which had combined recovery locations were not used.

Recovery area codes used in data tables include "CN" (central net), "ASESP" (southeast Alaska sport - tidal waters), "FWSP" (fresh water sport - Skeena River), "JSN" (Johnstone Straight net), "NN" (northern net), "NSPT" (northern sport - tidal waters), "NTR" (northern troll), "NWTR" (northwest Vancouver Island troll), "NCTR" (north central troll) and "SCTR" (south coast troll).

Data tables and charts present tag recovery data using "statistical week" time period units and Canada Department of Fisheries and Oceans (D.F.O.) and Alaska Department of Fish and Game "statistical area" location designations.

SIXTH EDITION FEB 1985

Figure 1. Statistical Area Map for Northern British Columbia.

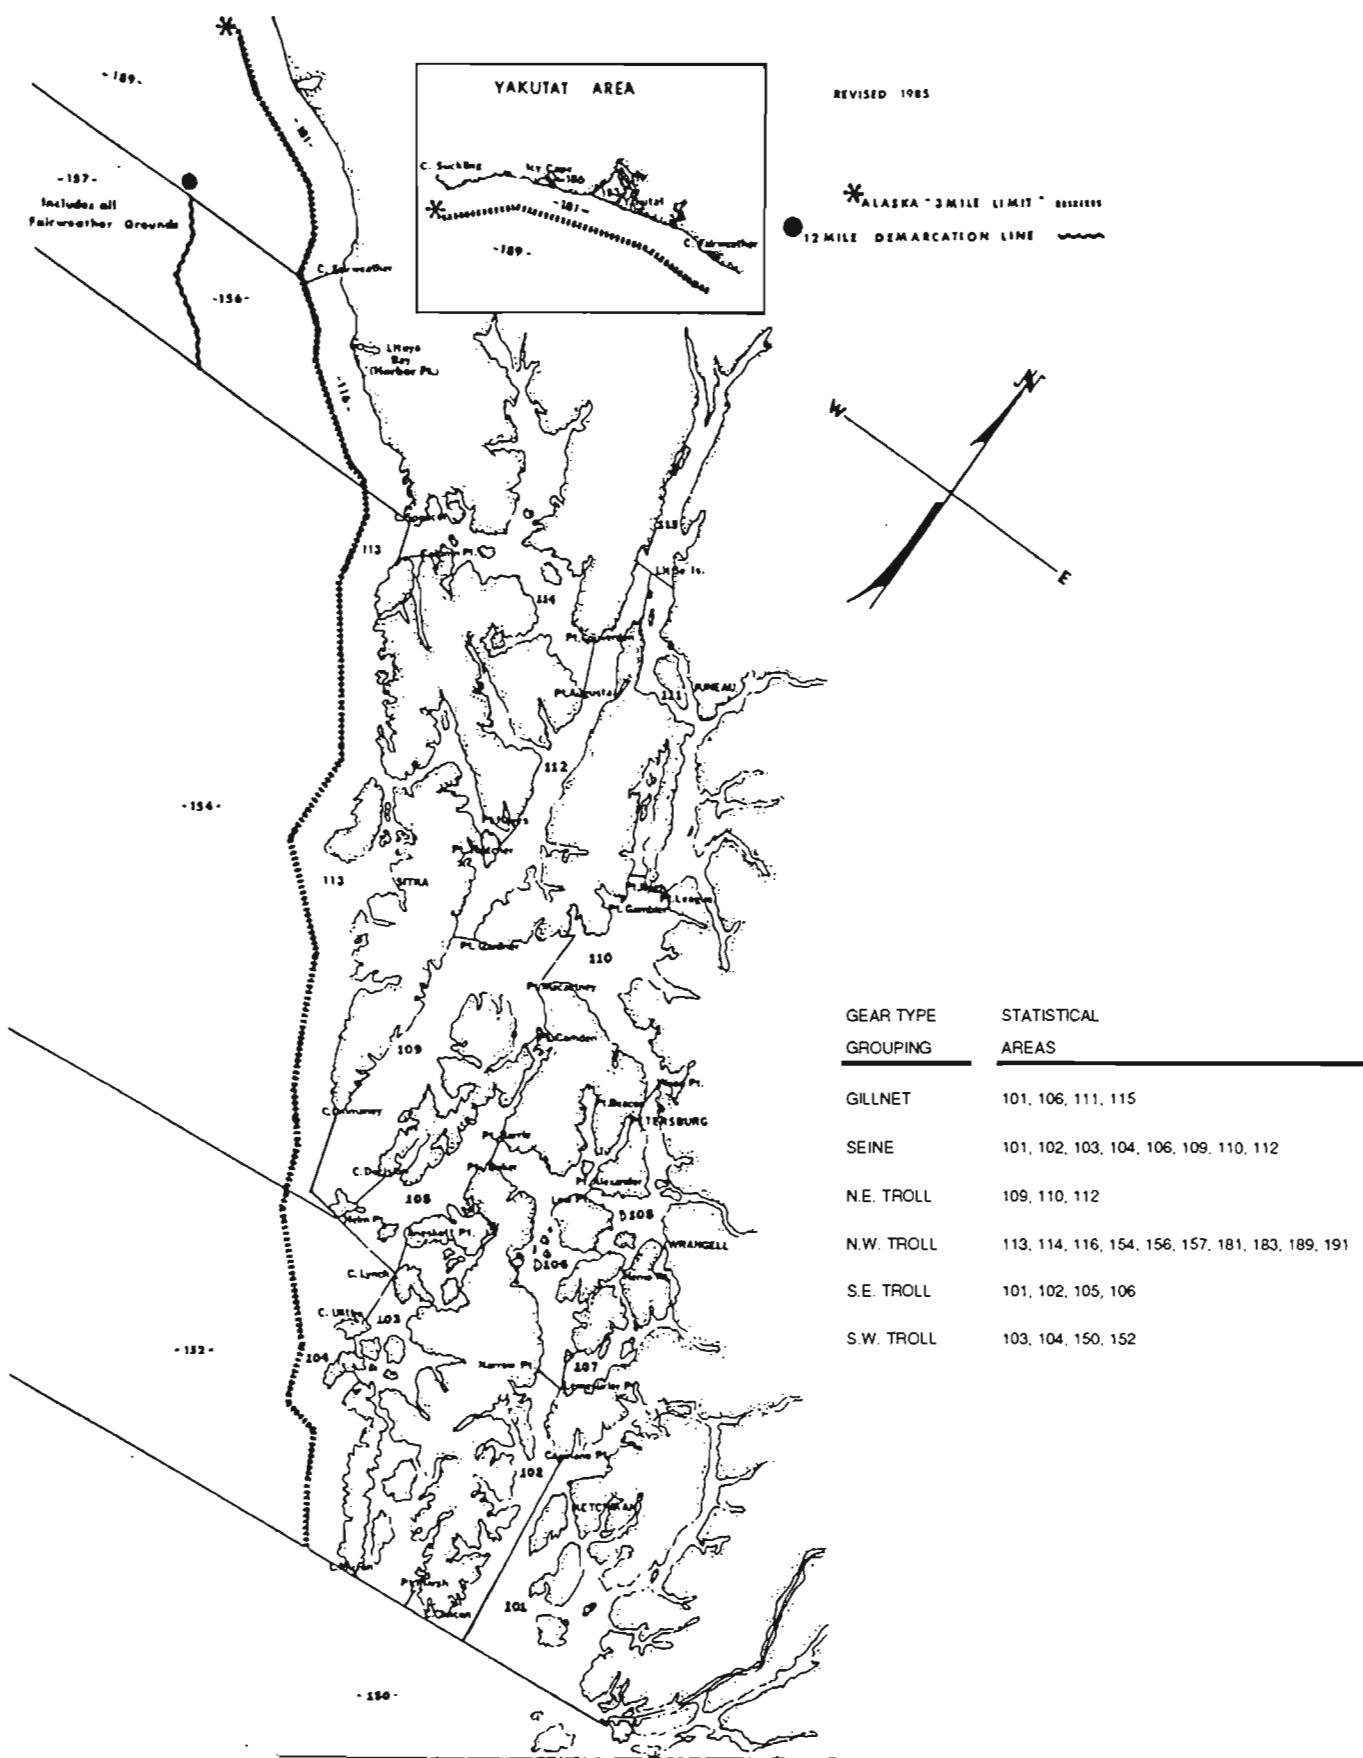

Figure 2. Statistical Area Map for Southeast Alaska.

DATA SUMMARIES

The results of estimated adjusted recoveries from commercial troll and net fisheries operating from 1987 to 1992 in Canadian statistical areas 1, 3 and 4 and in Alaska commercial fishing areas of 3-year age class CWT marked coho originating from the Skeena River watershed (1984 to 1989 brood years) are presented. Tagging sites that operated within this system during some or all of the brood years noted include Thornhill Creek (also known as Eby Street) and Terrace for the lower Skeena; and Kispiox River, Toboggan Creek, Fort Babine and Fulton River for the upper Skeena.

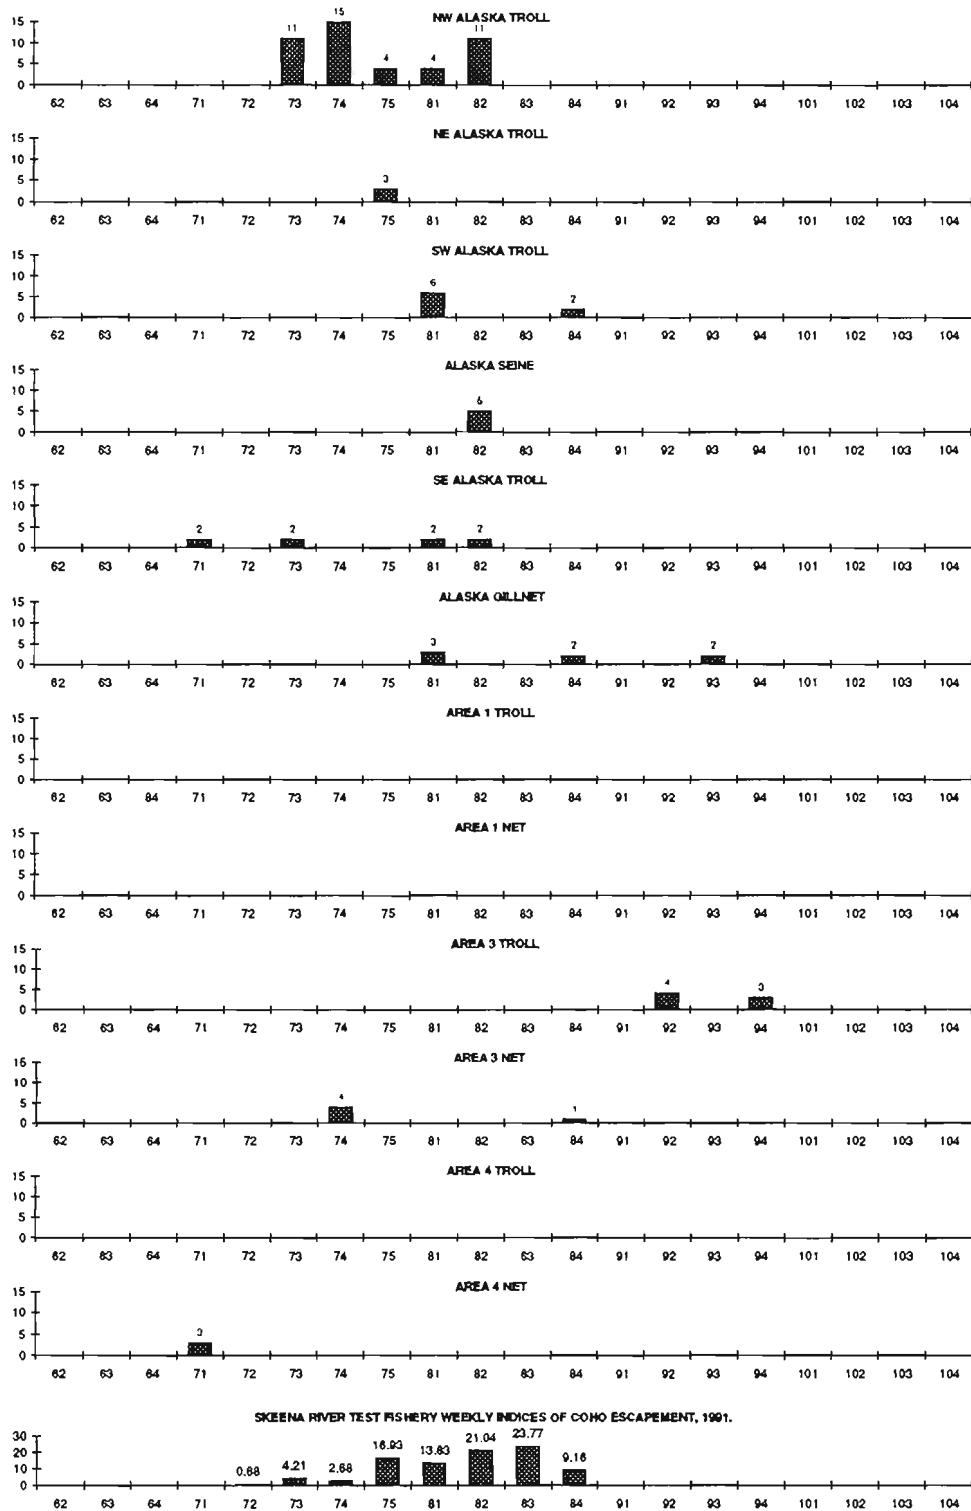

Data summaries are presented to include 1) annual recoveries by (a) each tag code and (b) tag code groupings, and 2) all tag years by (a) each tag code and (b) tag code groupings.

Harvest Data Bias.

Sales slip catch data recorded from commercial vessel landings accurately reflect the number and species of salmon harvested, but can at times include an error for location and time of catch. Vessels that fish in more than one statistical area during weekly openings may have catches from these different areas reported under only one location when the catch is delivered rather than a complete list of the combined catch regions. The mixing of catches harvested within one statistical week with fish harvested in the next can arise when vessels delay delivering their catch because weekly openings occur close together. The errors are believed to be very modest for net fisheries. Canadian troll catch data used in this report have been corrected to represent the best estimate of harvest date rather than landing date. The landing dates for the Canadian troll fishery can be later than catch dates because of the delay in landing catches, particularly for freezer trollers.

Estimated Adjusted CWT recoveries of coho tagged at the Kispiox River, Skeena River watershed.
All data: 1987 to 1992 recovery years, 1984 to 1989 brood years.

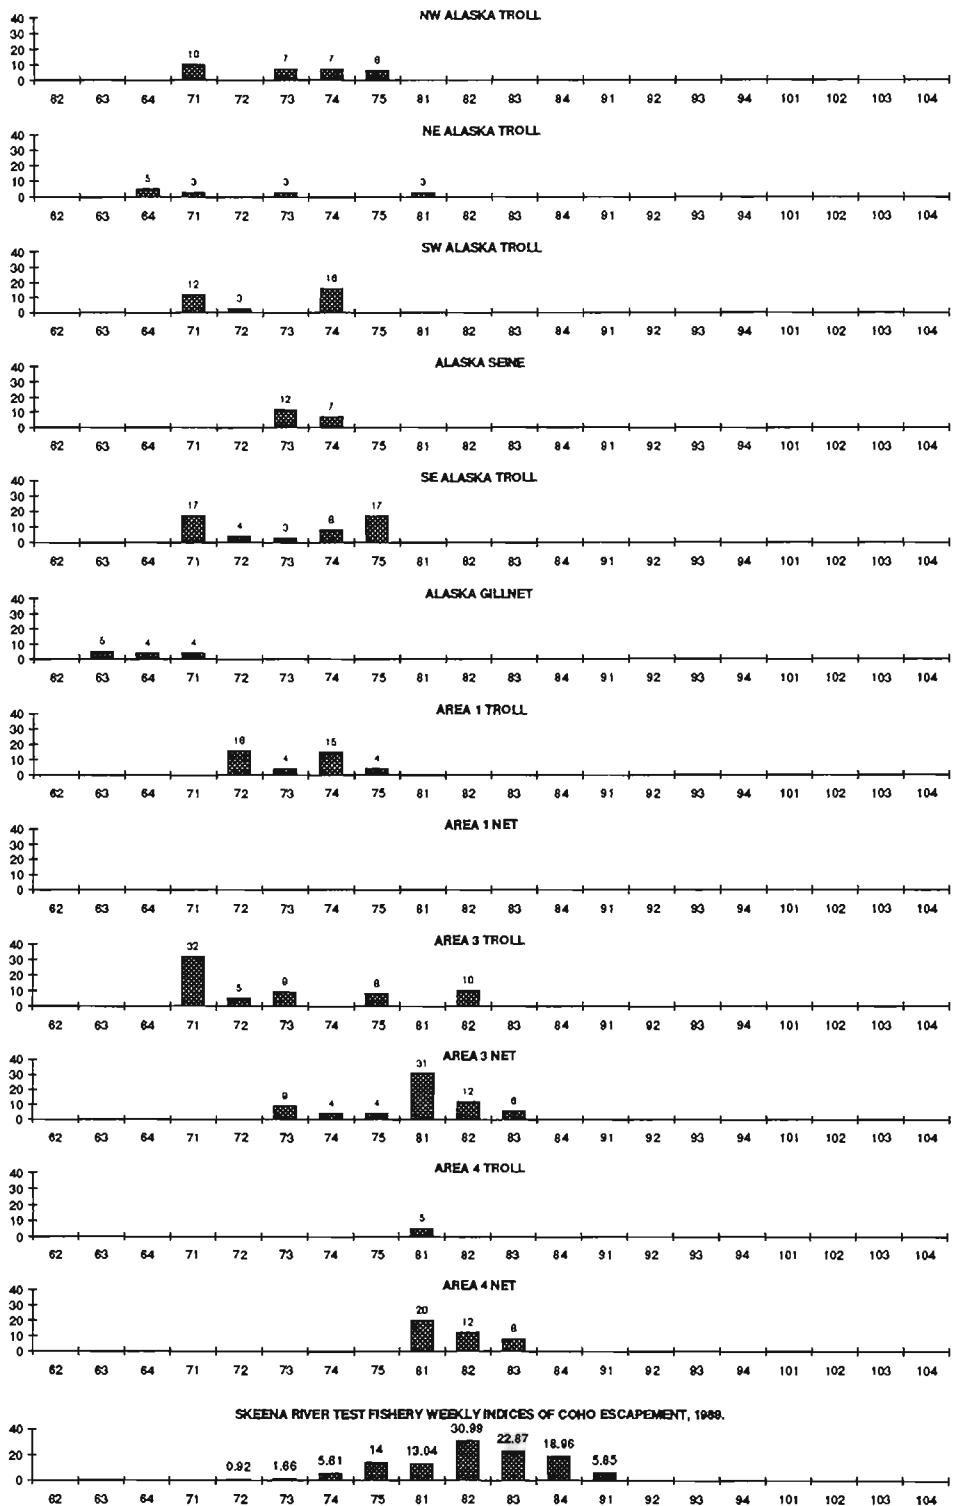

1988 Estimated Adjusted CWT weekly recoveries of coho tagged at Toboggan Creek, Skeena River watershed, 1985 brood year.

1988 Estimated Adjusted CWT recoveries of coho tagged at Toboggan Creek, Skeena River watershed,
1985 brood year.

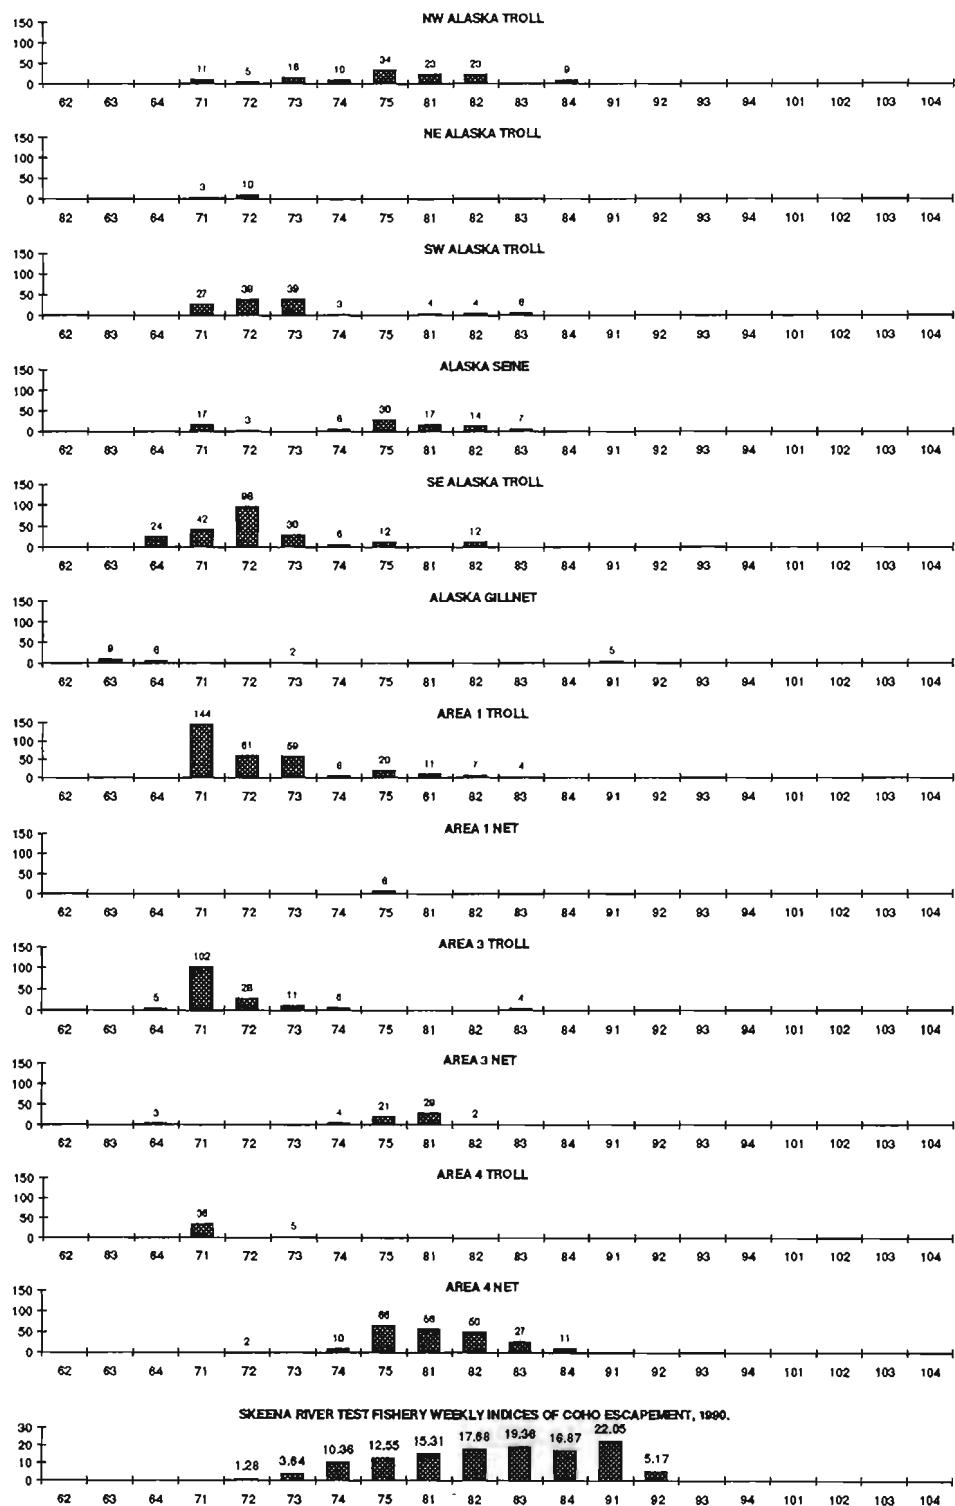

1989 Estimated Adjusted CWT weekly recoveries of coho tagged at Toboggan Creek, Skeena River watershed, 1986 brood year.

1989 Estimated Adjusted CWT recoveries of coho tagged at Toboggan Creek, Skeena River watershed,
1986 brood year.

1990 Estimated Adjusted CWT weekly recoveries of coho tagged at Toboggan Creek, Skeena River watershed, 1987 brood year.

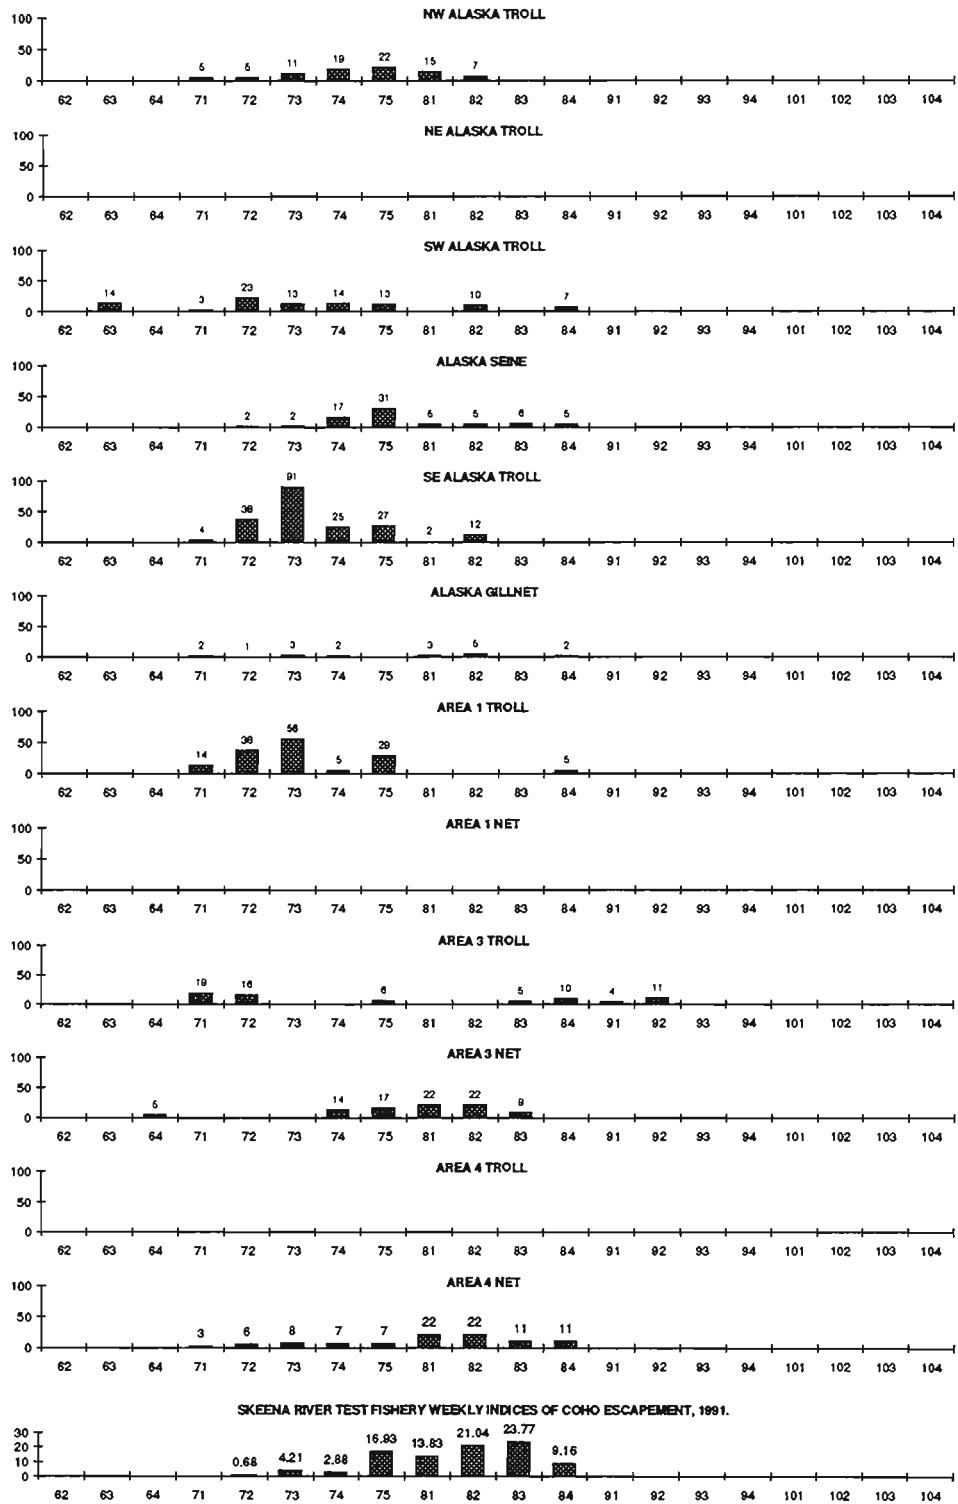

1990 Estimated Adjusted CWT recoveries of coho tagged at Toboggan Creek, Skeena River watershed,
1987 brood year.

1991 Estimated Adjusted CWT weekly recoveries of coho tagged at Toboggan Creek, Skeena River watershed, 1988 brood year.

1991 Estimated Adjusted CWT weekly recoveries of coho tagged at Toboggan Creek, Skeena River watershed, 1988 brood year.
