

# RENTAL MARKET REPORT

## Montréal CMA

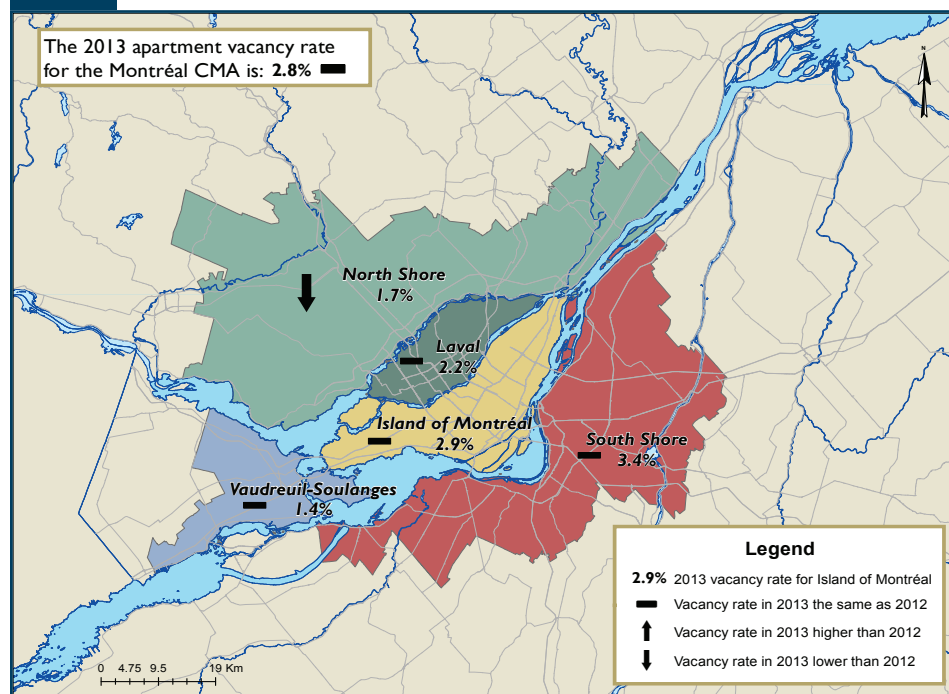

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2013

### Highlights

- In 2013, the vacancy rate on the primary rental market in the Montréal census metropolitan area (CMA) remained stable, at 2.8 per cent.
- The estimated increase in the average apartment rent was 1.7 per cent.
- On the secondary rental market, the vacancy rate for rental condominiums remained stable, at 2.7 per cent, despite the significant rise in the number of such units.

## Montréal CMA rental market overview

According to the results of the Rental Market Survey conducted in October 2013 by Canada Mortgage and Housing Corporation (CMHC), the vacancy rate on the primary rental market in the Montréal CMA stayed at 2.8 per cent in the fall of 2013, that is, at the same level as in the fall of 2012. This rate remained relatively stable in relation to recent years, having varied between 2.4 per cent and 2.9 per cent since 2006 (see figure 2). This resulted from the rather stable rental housing demand and supply.

In 2013, demand for rental housing was limited by the continued strong movement to homeownership among young households (aged 25 to 34). However, this factor was offset by the still high net migration in the CMA and the recent improvement in youth employment. On the supply side, very few new rental units were added to the market in 2013. The level was about 1,500 new conventional rental dwellings in the CMA, compared to some 2,300 a year in the early 2000s. There were even more rental condominiums added to the supply than conventional rental housing units. In the end, with supply and demand having shown little change, the vacancy rate remained stable in the CMA.

As in recent years, the vacancy rates were higher for bachelor apartments and larger structures.

The average rent for two-bedroom apartments was \$730. The highest level was registered in the Downtown and Île-des-Sœurs zone (\$1,399). Conversely, the lowest were recorded in Mercier (\$608), Montréal-Nord

(\$618) and Villeray, Saint-Michel and Parc-Extension (\$621). In the suburbs, Saint-Jérôme stood out, with an average rent of \$620.

The estimated change in the average rent for all apartments between October 2012 and October 2013 was 1.7 per cent.<sup>1</sup> In the case of two-bedroom units, the rate of growth was similar, at 2.0 per cent. The change, comparable to the rate of inflation, was due to the relatively stable vacancy rate, a factor that likely prompted many landlords to raise their rents by a proportion similar to the general growth in prices.

## Rental housing supply and demand factors

The stability of the vacancy rate over the past year resulted from the steady rental housing demand and supply in 2013. On the rental market, demand has been limited by the continued strong movement to homeownership.

The low mortgage rates, in relation to their historical values, have been favouring homebuying, especially among young households aged from 25 to 34, who often turn to condominiums, which are a more affordable housing type. In fact, the large numbers of condominium starts recorded in the CMA in recent years have resulted in part from this homeownership trend. This year, young buyers had lots of choice on the condominium market, such that many young renters left their apartments to move into their new properties.

This impact of this trend has been limited by net migration, which will remain at a high level in 2013. For the fifth year in a row, this level will be above 30,000 people, after having hovered around 20,000 people a year from 2000 to 2008. The high net migration has resulted from the considerable influx of newcomers to Quebec in recent years. In 2012,

Figure 2

Source: CMHC

<sup>1</sup> This estimate was made using a sample of structures common to both the 2012 and 2013 fall surveys.

more than 45,000 immigrants settled in the Montréal area, largely on the Island. Most first move into rental buildings when they arrive in Quebec. Consequently, they account for a large part of the rental housing demand in the CMA.

The job market, which is regaining strength among people aged from 15 to 24, is another factor that is supporting demand. This age group experienced a 5-per-cent increase in employment between October 2012 and October 2013 (12-month moving average), for a gain of 13,750 jobs.<sup>2</sup> With this upward trend, young people are likely leaving their roommates or family nests and getting their own apartments.

As for supply, it has remained relatively stable in recent years. Since 2009, there have been 1,500 rental housing starts, on average, per year (excluding retirement homes). Consequently, in comparison with the total number of dwellings in the rental housing stock in the CMA (more than 500,000), very few new units have been added in recent years. As a result, the rental housing stock has grown by less than 0.5 per cent.

### Vacancy rates higher for bachelor apartments and larger structures

According to the detailed results of the Rental Market Survey, bachelor units had a higher vacancy rate than larger apartments across the CMA. For bachelor units, the vacancy rate was 3.8 per cent this year, remaining relatively stable in relation to 2012.

The vacancy rates also remained stable in the other apartment categories. In October 2013, 3.1 per cent of one-bedroom apartments were unoccupied, compared to 2.5 per cent of two-bedroom apartments and 2.3 per cent of units with three or more bedrooms, despite the movement to homeownership.

There were also vacancy rate differences depending on structure size. The vacancy rate was lower for smaller structures (with 3 to 5 units), at 2.0 per cent in October 2013. The closeness between landlords and tenants in buildings of this type probably favours rental stability.

The vacancy rates for larger structures were higher, at 4.1 per cent for those with 20 to 49 units, 3.7 per cent for those with 50 to 99 units and 2.9 per cent for those with 100 or more units.

### Island of Montréal: immigration supporting demand

On the Island of Montréal, the vacancy rate reached 2.9 per cent in October 2013 (compared to 2.8 per cent in 2012). Given that nearly 80 per cent of the rental apartments in the CMA are located on the Island of Montréal, the results for the CMA are almost identical to those for the Island of Montréal. While the vacancy rate on the Island remained stable, the movement to homeownership was still significant, as evidenced by the considerable number of absorbed condominiums (more than 5,300 between October 2012 and October 2013). However, demand

Apartment Vacancy Rates (%) by Major Centres		
	Oct. 2012	Oct. 2013

for rental housing was supported by immigration. Among the 45,000 immigrants who arrived in the Montréal CMA in 2012, 38,250 settled on the Island.<sup>3</sup>

Young people aged from 15 to 24 were also fuelling demand on the

<sup>2</sup> Statistics Canada.

<sup>3</sup> Institut de la statistique du Québec, International and interprovincial migration by census metropolitan area and by administrative region, Quebec, 2011-2012.

Island of Montréal rental market. Interregional net migration on the Island, which showed a deficit overall, was however positive in the group aged from 15 to 24 (+3,307 people<sup>4</sup>). The concentration of institutions of higher learning in Montréal may explain the significant contribution of this age group to the rental housing demand.

The vacancy rates were generally lower in the central and southeastern market zones on the Island (between 1.5 per cent and 3.2 per cent). In the western and northern zones of the Island, the rates were mostly higher, particularly in the zones including Notre-Dame-de-Grâce and Côte-Saint-Luc (4.2 per cent); Beaconsfield, Kirkland and Pointe-Claire (4.3 per cent); Dorval, Lachine and Saint-Pierre (4.4 per cent); and Ahuntsic and Cartierville (4.5 per cent).

While the vacancy rate for the Island overall remained stable, the rates did post changes in different zones, having decreased in LaSalle (-2.0 percentage points) and Hochelaga-Maisonneuve (2.2 percentage points) and increased in Saint-Laurent (+2.4 percentage points).

The average rent for two-bedroom apartments reached \$746. Two zones had average rents equal to or greater than \$1,000 for such apartments: Downtown (\$1,399) and the southern West Island zone (\$1,000). Mercier, for its part, had the lowest average rent, at \$608.

The estimated increase in the average apartment rent rose to 1.9 per cent overall.

Figure 3

Source: CMHC

### Laval: vacancy rate stable

The vacancy rate on the Laval rental market remained stable in October 2013, at 2.2 per cent. Among the different unit categories, the rates were 4.3 per cent for bachelor apartments and 3.1 per cent for one-bedroom units while, for two-bedroom apartments and those with three or more bedrooms, the rates stood at 1.8 per cent and 2.3 per cent, respectively.

Immigration has been a significant factor stimulating the Laval rental market. The number of immigrants arriving in the region every year has almost tripled over the last ten years, rising from 1,120 people in 2002 to 2,929 in 2012.<sup>5</sup>

The Laval rental market results varied from one zone to another. Two zones had vacancy rates below 2 per cent,

namely, Laval-des-Rapides (1.6 per cent) and Vimont-Auteuil (1.8 per cent). Conversely, one zone stood out with a rate above 3 per cent: Saint-François-Saint-Vincent-Duvernay (3.6 per cent).

The presence or absence of major transit routes does not seem to have had an impact on the rent differences among the various zones in Laval. In fact, in the zone including the metro (Laval-des-Rapides), the average rent for two-bedroom apartments does not appear to be any higher than in the overall Laval sector (\$660, versus \$690) and has remained stable there. Only the Chomedey-Sainte-Dorothée zone stood out, with a higher average rent for two-bedroom apartments (\$734) than elsewhere in Laval. In the other zones, the average rents hovered between \$649 in the Saint-François-Saint-Vincent-Duvernay zone and \$690 in Vimont-Auteuil.

<sup>4</sup> Institut de la statistique du Québec, Migration balances of the administrative regions with each of the other regions, all ages, Quebec and administrative regions, 2011-2012.

<sup>5</sup> Institut de la statistique du Québec, Migration balances of the administrative regions with each of the other regions, all ages, 1996-2012.

The estimated increase in the average apartment rent was 1.2 per cent overall.

### **North Shore: vacancy rate unchanged at 1.7 per cent**

On the North Shore, the vacancy rate also stayed at the same level as in October 2012. At 1.7 per cent, this rate was below the average for the CMA. Lower average rents on the North Shore than in the other large sectors of the CMA as well as strong migration from the Island of Montréal<sup>6</sup> could account for the tighter market conditions. As well, the decrease in rental housing starts in recent years has limited supply and kept the vacancy rates at relatively low levels. The rental housing stock therefore showed weak growth.

There were no significant vacancy rate or rent differences among the zones on the North Shore. The overall average rent for two-bedroom apartments was \$673. Only the most outlying zone (Saint-Jérôme) stood out, with a higher vacancy rate (3.1 per cent) and a lower average rent (\$620 for two-bedroom apartments) than the other zones.

The estimated increase in the average apartment rent was 1.2 per cent overall.

### **South Shore: market slightly softer**

On the South Shore, the market was somewhat less tight than in the other sectors of the CMA, as the vacancy rate reached 3.4 per cent this year and slightly exceeded the average for the CMA (2.8 per cent). In Longueuil, the proportion of

unoccupied units was higher, reaching 4.2 per cent. This zone has the most rental housing units on the South Shore. The homeownership trend very likely had an impact in this zone. The market was also softer in the zone including Boucherville, Brossard and Saint-Lambert, where the vacancy rate was 3.3 per cent. Market conditions were tighter in the eastern zones of the South Shore. In fact, the vacancy rates were 1.6 per cent in the zone that includes Beloeil and Saint-Bruno and 1.5 per cent in the zone including Carignan, Chambly and Mont-Saint-Hilaire.

On average, the rents recorded on the South Shore were higher than those noted on the North Shore and comparable to those registered in Laval. The average rent for two-bedroom apartments on the South Shore was \$689. Like in the Laval zones, the average rents recorded in the South Shore zones were closer to those noted on the Island of Montréal than to those registered in the North Shore zones. However, the average rents were very similar from one zone to another within the South Shore, except in the zone including Boucherville, Brossard and Saint-Lambert, where the average rent was slightly higher (\$720).

The estimated increase in the average apartment rent was 1.3 per cent overall.

### **Availability rate**

Like the proportion of unoccupied units, the availability rate remained stable in relation to October 2012, at 3.2 per cent for the CMA overall. This rate reflects not only the vacant units but also the units for which

the existing tenant has given, or has received, an official notice to move, and for which a new tenant has not signed a lease. It gives a general idea of the supply of available units in the short term, even if the fall season is not a time of year when many tenants typically move in Quebec.

### **Rental condominium market performing well**

On the secondary rental market, the vacancy rate for rental condominiums remained stable in October 2013, at 2.7 per cent, despite the significant rise in the number of such units. The strong increase in the supply on this market was the direct result of the considerable volume of condominiums started in recent years. In the CMA, the proportion of rental condominiums has now reached 12.1 per cent (up from 11.0 per cent in 2012). This represents the addition of some 2,900 rental units, and this number has been growing faster than the number of new conventional rental units. The stability of the vacancy rate showed that rental condominium demand rose at the same pace as supply. It is also interesting to note that this market had almost the same vacancy rate as the purpose-built rental market, even though the average rent for condominiums was much higher. Many of these condominiums are contained in modern buildings and found takers even if their average rent (for all unit sizes combined) was, on average, 59 per cent higher than that of purpose-built rental units (\$1,124, versus \$708). Moreover, rental condominiums performed better than purpose-built rental units renting for \$900 or over, since their vacancy rate was lower

<sup>6</sup> Institut de la statistique du Québec, Migration balances of the administrative regions with each of the other regions, all ages, 1996-2012.

(2.7 per cent, versus 3.5 per cent). Renters who are willing to pay a higher rent therefore seem to prefer rental condominiums, which are often contained in newer buildings.

As well, the zone comprising Downtown and Île-des-Sœurs had the most rental condominiums. In fact, up to 22 per cent of the condominiums in this zone were rentals, a percentage almost twice as high as the average for the CMA (12 per cent). Two other

sectors also had higher-than-average proportions of rental condominiums, namely, Laval (17 per cent) and Vaudreuil-Soulanges (13 per cent).

As for the vacancy rates, they were stable on the Island and in the suburbs, but the rate in Vaudreuil-Soulanges posted a notable decrease (-3.3 percentage points).

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: Condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicators

CMHC no longer reports on its rental affordability indicators (i.e. average rent compared to average renter income) given significant variability of underlying renter income data.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
