

HOUSING NOW

Regina CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2013

New Home Market

Housing starts up 83 per cent in 2012

Housing starts in the Regina Census Metropolitan Area (CMA) totalled 873 units from October to December of 2012, up 58 per cent from the pace set one year earlier. This heightened pace characterized new home production throughout the entire

year, resulting in an 83 per cent year-over-year increase in total housing starts in 2012. The 3,093 homes that began construction in 2012 marked the strongest annual total for Regina's home builders since 1977. Increased production of both single-detached and multiple-family dwellings contributed to the gains as builders responded to elevated demand for housing buoyed by a robust economy, heightened net migration, and rising wages.

Figure 2

Source: CMHC

Regina's builders started 256 single-detached homes in the fourth quarter of 2012, down 4.5 per cent from the 268 units a year prior. In 2012, regional builders began construction of an average 107 single-detached homes each month, nearly double the 56-unit per month average between 2001 and 2011. Single-detached starts amounted to 1,289 units in 2012, up 35 per cent from the previous year. This also represents the highest annual tally of single-detached starts in 33 years.

The number of complete and unabsorbed single-detached homes stood at 64 units in December, down four per cent from 67 units in December 2011. The decline in inventory was due to the number of absorptions outpacing completed units. To the end of December, 1,065 units had been completed, up 55 per cent from the year prior. Meanwhile, absorptions stood at 1,061 units in 2012, up 63 per cent from 2011.

The average price of an absorbed single-detached home in the Regina CMA during the fourth quarter

was \$468,075, up 7.2 per cent from \$436,745 a year prior. By comparison, the median price increased 11 per cent to \$445,203. For all of 2012, the average price for a single-detached home was \$462,023, a gain of only one per cent over 2011. This was comparatively weaker than the growth in the New House Price Index, which increased 4.5 per cent to the end of

November. The smaller gain in average price reflects a slight shift in the sales distribution toward the higher price ranges in 2012.

Multi-family starts, which consist of semi-detached units, rows, and apartments, totalled 617 units from October to December, more than double the 286 units recorded in the fourth quarter of 2011. This was bolstered by a 302-unit performance in December, the highest number of starts on record for that month. By year-end, area builders had started 1,804 units, more than double the 736 units started a year earlier. This also represents the highest volume of multi-family starts on record. The increase was largely fuelled by heightened production of rental units as persistently low rental apartment vacancy rates, along with financial incentives from the public sector, helped spur a rise in rental construction.

Multi-family completions from October to December amounted to 175 units, up from 66 units in the fourth quarter of 2011. To the

Figure 3

Source: CMHC

end of December, 999 multi-family homes were completed, representing an 89 per cent increase from the prior year and the highest annual tally of completions since 1979. Similarly, the number of multi-unit absorptions increased in 2012, rising 73 per cent year-over-year to 975 units. Only 37 multi-family units across the Regina CMA were completed and unabsorbed at the end of December, five per cent lower than corresponding levels in 2011. However, with the number of semi-detached and apartment units under construction significantly higher than the previous year, expect these two market types to see higher inventories moving forward.

Resale Market

Sales of existing homes increase slightly in 2012

With a 1.4 per cent year-over-year gain to 3,952 transactions, the rise in MLS® residential sales in Regina was modest in 2012 compared to the 8.9 per cent increase in 2011. The slower pace of growth can be attributed to a moderation in sales during the second half of 2012, with sales declining 18 per cent year-over-year in the fourth quarter. Nonetheless, the level of sales in 2012 still represented the strongest performance since 2007.

The number of new listings across the Regina market area totalled 1,079 units in the fourth quarter of 2012, 2.1 per cent higher than in the same period a year earlier. Meanwhile, active listings increased 3.8 per cent year-over-year during the last three months of 2012 to an average 1,132 units. As a result, the sales-to-active listings ratio declined to 21 per cent in the fourth quarter from 27 per cent the year prior. Despite this reduction,

Figure 4

Source: CREA

homes spent less time on the market than they did in the previous year. The average listing duration during the fourth quarter was 38 days, down from 44 days in the same period of 2011.

Balanced market conditions and shorter listing durations continued to support upward pressure on prices. Regina's average MLS® price increased 10.6 per cent year-over-year in the fourth quarter to \$306,297. On an annual basis, the average resale price in Regina increased 8.5 per cent to \$301,145, compared to 2011. This is higher than the 7.5 per cent gain in 2011 and represents the strongest price growth in Regina since 2008.

Economy

Employment growth remains strong in 2012

Regina's economy continued to expand in 2012, characterized by strong job growth and a declining unemployment rate. Total employment in Regina averaged 126,200 positions in 2012, representing a 2.7 per cent

gain or 3,400 new positions. The majority of these gains were full-time jobs. Full-time employment in Regina expanded 2.5 per cent, while part-time payrolls recovered from the previous year's decline and increased 3.9 per cent. With this impressive performance, average weekly earnings in Regina climbed 4.6 per cent in 2012, following a gain of 6.6 per cent a year prior.

On a seasonally adjusted basis, average employment in the fourth quarter amounted to 127,500 positions, the highest total on record and 1,200 positions more than in the previous quarter of the year. With additions to Regina's labour force surpassing the number of new jobs, the unemployment rate in Regina recorded a modest increase. The seasonally adjusted unemployment rate averaged 4.3 per cent from October to December 2012, up from 4.0 per cent in the third quarter.

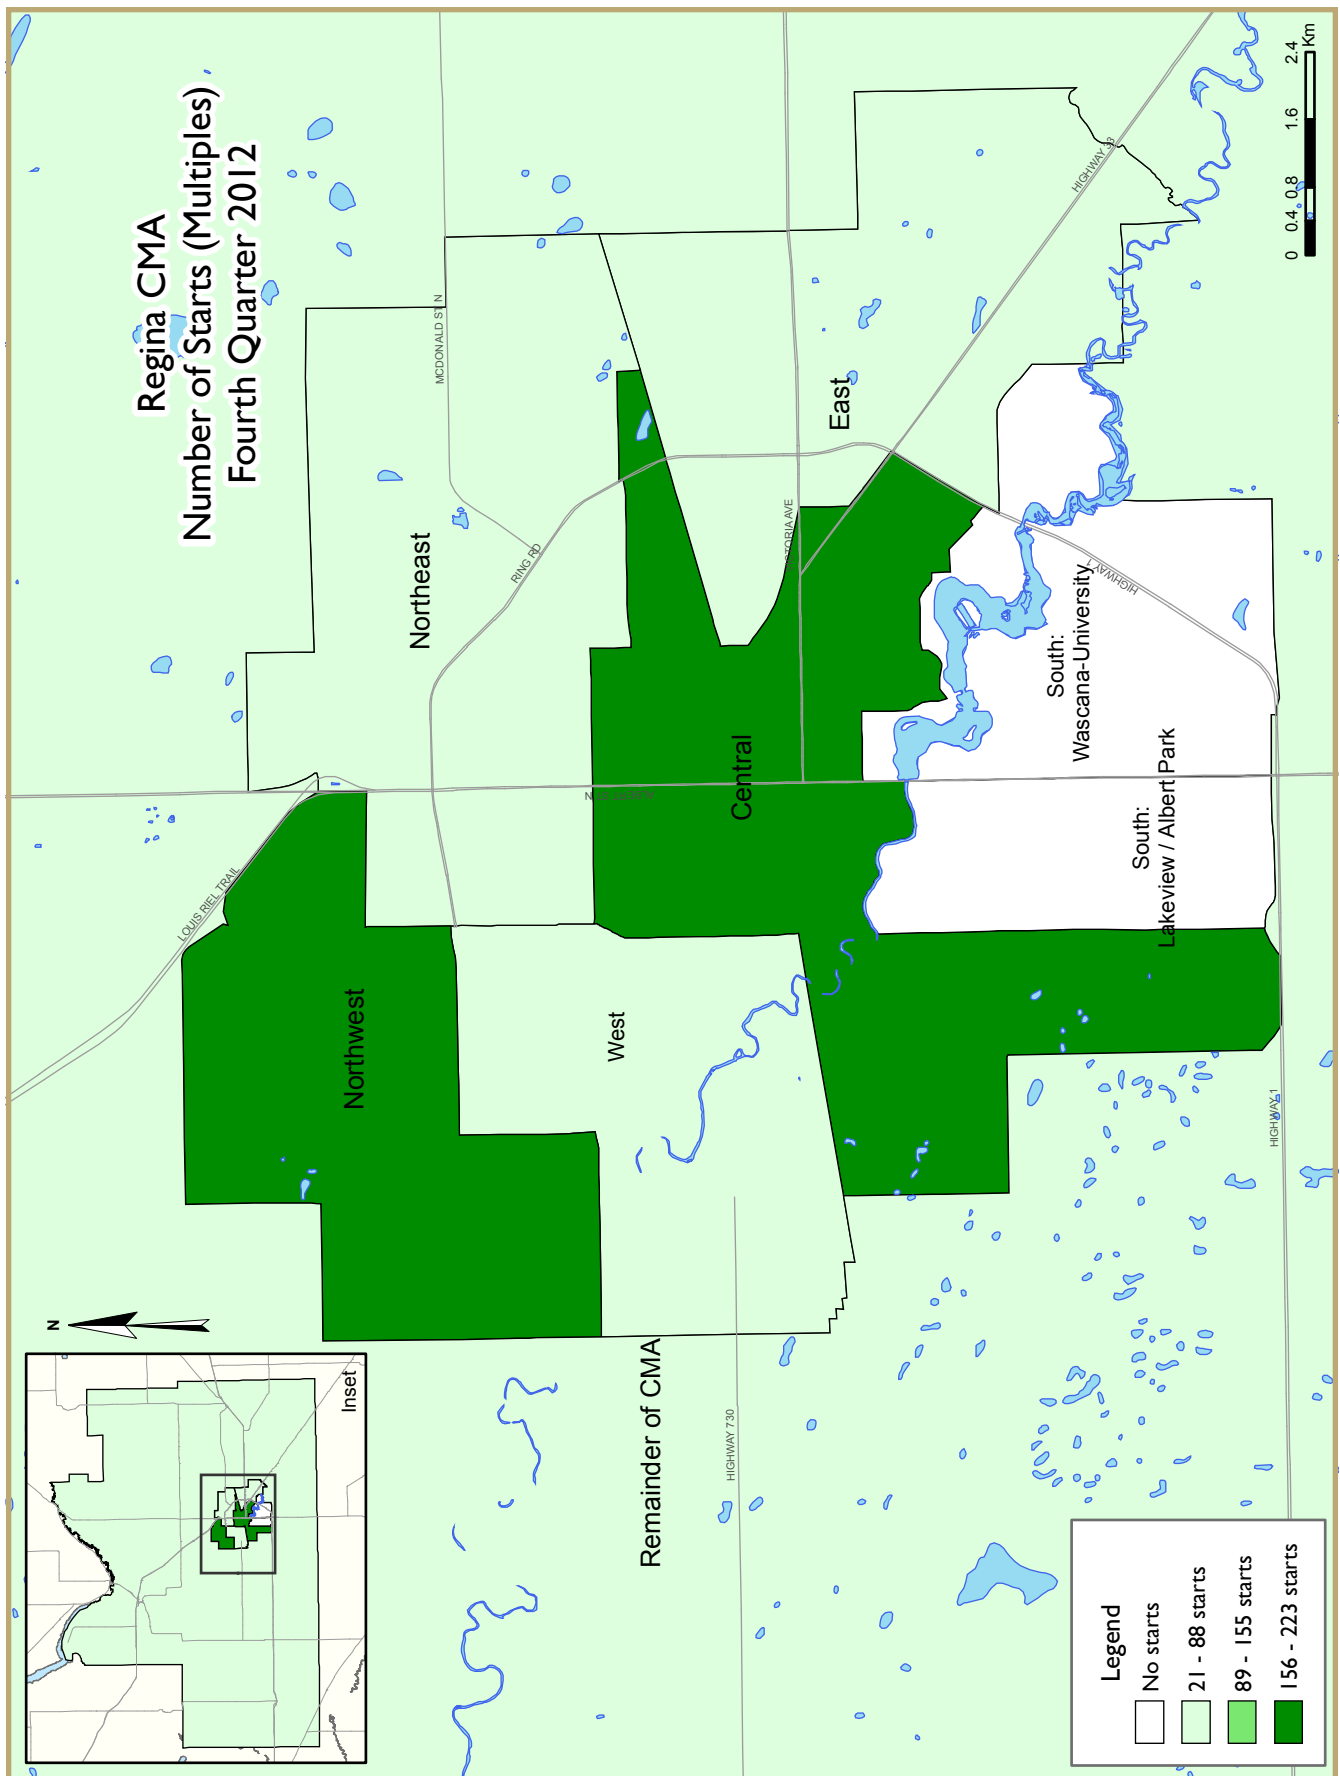

The strong job performance in 2012 continued to draw an impressive number of migrants to the province. In the third quarter of 2012, net

migration to Saskatchewan reached a new high for the quarter, offering support for all three housing markets. Statistics Canada estimated Saskatchewan attracted a net total of 5,020 migrants from July through September 2012, up from 4,203 in the third quarter of 2011. Given the province's low unemployment rate and labour shortages in some key sectors, the flow of non-permanent residents accelerated. From July through September, non-permanent residents to the province climbed to 1,283 people, 52 per cent higher than the previous year and the highest quarterly total on record. Interprovincial migration also improved in the third quarter to 1,286 net arrivals, 50 per cent higher than the previous year. Ontario remained the primary source of inter-provincial migrants to Saskatchewan, providing a net addition of 714 migrants in the third quarter. International migration remained elevated at 2,451 people in the third quarter of 2012, on par with the previous year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
