CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2013

New Home Market

Housing starts increase in the second quarter

After a slow first quarter, housing starts in the Regina Census Metropolitan Area (CMA) picked up in the second quarter of 2013. Overall housing starts in the quarter totalled 880 units, up from the 685 in the corresponding period of 2012. The gain can be attributed to the

multi-family sector, which saw a 73 per cent increase in the number of units initiated to 529 from 305 a year earlier. Of the three months in the quarter, only April recorded weaker starts than the previous year, while May and June both produced year-over-year gains. During the first half of 2013, housing starts in Regina numbered 1,475 units, up from 1,425 started over the same period a year prior.

From April to June, local home builders poured foundations for 351 single-detached units, 7.6 per cent less than the 380 starts a year earlier. Year-over-year declines were recorded in two of the three months during the quarter, with only May registering a gain from the previous year. Of the areas comprising the Regina CMA, the Central zone reported the largest share in single-detached starts in the quarter, representing 39 per cent of the total CMA production. After six months, single-detached starts in Regina totalled 585 units, down from 620 in the first half of 2012.

Following a heightened pace of construction in 2012, the inventory of complete and unabsorbed single-detached units remained elevated in the second quarter. At 85 units for the month of June, inventories were 37 per cent higher than the previous year. With these levels among the highest in over a decade, local builders will be cautious not to accelerate production in the coming months, especially as single-detached absorptions were slightly outpaced by completions in the second quarter. From April to

June, there were 313 completions, up 35 per cent from the same period in 2012. In contrast, 306 single-detached homes were absorbed in the second quarter, 32 per cent more than a year earlier.

The average absorbed price for single-detached homes in the second quarter stood at \$481,119, up 4.6 per cent from the same period in

2012. Much of the increase was compositional as the share of homes absorbed at prices above \$400,000 increased to 67 per cent in the second quarter from 60 per cent in the same period of 2012. Readers are cautioned that absorbed prices in many cases represent the price negotiated prior to the start of construction. By comparison, contractor selling prices reported by Statistics Canada's New House Price Index (NHPI) for Regina rose by an average 2.8 per cent to the end of May 2013 from the previous year.

Multi-family starts, which consist of semi-detached, row, and apartment units, totalled 529 units during the second quarter, up from 305 one year prior. Apartment starts contributed the largest gains, increasing to 409 units from 193 in the second quarter of 2012. Row starts also reported an increase to 90 units in the second quarter from 44 in the same period one year earlier. Semi-detached starts, however, declined by 56 per cent to 30 units from 68 under the same comparison. Meanwhile, of the 890 multi-family units constructed during

Figure 3

Source: CMHC

the first six months of 2013, nearly 44 per cent or 388 units were for the rental market. This contrasts sharply with the 105 rental units initiated during the first half of 2012.

The inventory of complete and unabsorbed multi-family homes in the ownership market stood at 44 units at the end of June, down 8.3 per cent from corresponding levels in 2012. Of this inventory, 33 were apartment units, with the balance being semi-detached and row units. Thus far in 2013, multi-family absorptions in the ownership market have kept pace with completions, maintaining the relatively low stock of inventory. However, the number of multi-family units under construction for all markets in June reached a record 2,243 units, which could potentially lead to rising inventories in the coming months.

Resale Market

Existing home sales moderate in the second quarter of 2013

Residential MLS® sales in Regina slowed in the second quarter compared to the previous year. Year-over-year decreases were recorded in each month during the quarter, with April reporting the largest decline. Overall sales during the second quarter totalled 1,145 units, down 13 per cent from corresponding levels in 2012. After six months, resale transactions in Regina totalled 1,831 units, down 18 per cent from the 2,236 sales recorded in the corresponding period of 2012. A number of factors including price gains and continued competition from the new home market contributed to the lower level of existing homes sales.

Figure 4

Source: CREA

Active listings averaged 1,641 units during the second quarter, up 19 per cent from a year ago. Weaker sales combined with an increase in new listings in recent months have helped expand supply levels. The sales-to-active listings ratio averaged 23 per cent in the second quarter compared to 32 per cent in the same period one year prior. Given these conditions, homes spent a few more days on the market with the listing period averaging 33 days during the second quarter compared to 29 days in the second quarter of 2012.

With balanced market conditions persisting and more choices for homebuyers due to higher active listings relative to sales, MLS® residential prices continued to increase at a modest pace during the second quarter. Resale prices during the second quarter in Regina increased by 2.4 per cent from a year earlier to an average of \$316,851. To the end of June, the average resale price increased by 4.7 per cent on a year-over-year basis to just over \$314,000.

Economy

Second quarter posts strong employment growth

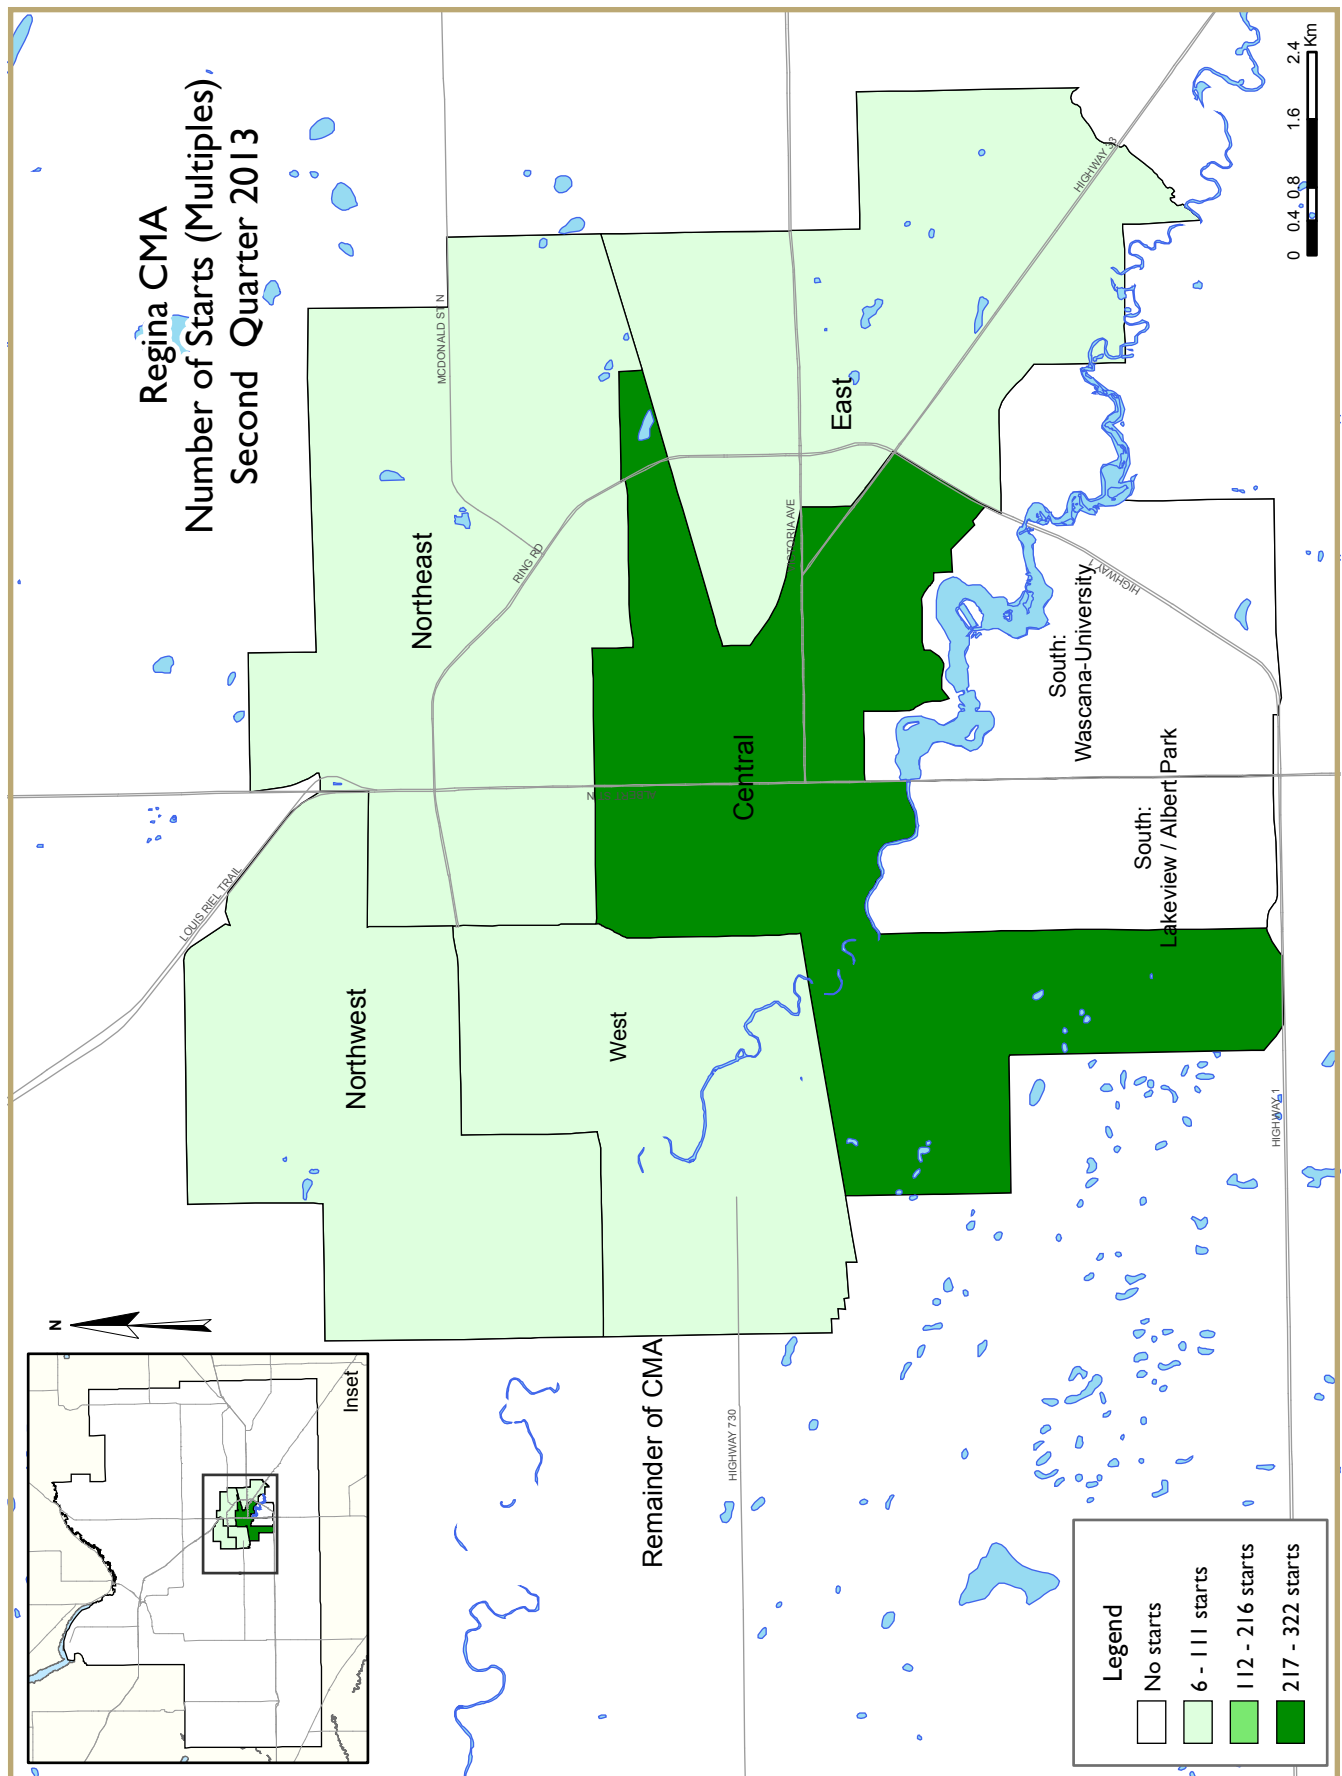

The strong labour market conditions witnessed in Regina during the first few months of 2013 continued into the second quarter. Average employment in Regina expanded 8.3 per cent to 134,400 positions during the first six months of 2013 compared to 124,150 in the corresponding period of 2012. This represented 10,250 new jobs comprising 8,900 full-time and 1,350 part-time positions. With additions to the labour force surpassing the employment expansion, Regina's seasonally-adjusted unemployment rate increased slightly to 3.7 per cent in the second quarter from 3.5 per cent in the first quarter of 2013. Notwithstanding the strong gains in employment and a low unemployment rate, average weekly earnings in Regina decreased by 2.3 per cent in the second quarter to \$936 from \$958 a year ago.

With economic prospects improving in other regions within Canada, the moderation in net migration to Saskatchewan witnessed in the final months of 2012 continued into the first quarter of 2013. Saskatchewan attracted a net inflow of 2,738 migrants in the first quarter, down 26 per cent from the corresponding period in 2012. Most of the decline can be attributed to a reduction in net international migration that saw only 1,769 new arrivals compared to 2,681 people over the same period a year earlier. In addition, Saskatchewan lost 339 people to other provinces in the first quarter after gaining 327 people in the corresponding period of 2012. On the positive side, a total of 1,308 non-permanent residents arrived in the province during the first three months of 2013 compared to 680 in the same period of 2012. Despite the overall moderation, net migration will remain an important driver of housing demand and household formation in Saskatchewan this year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
