

HOUSING NOW

Regina CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fourth Quarter 2013

Highlights

- Total housing starts trended higher over the third quarter
- Average absorbed price for single-detached units increased from the previous year
- Demand and supply conditions in the resale market remained balanced

Figure 1

* SAAR: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Regina Census Metropolitan Area (CMA) were trending at 3,396 units in September compared to 3,204 in August and 2,710 in July. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Regina CMA numbered 908 units in the third quarter, up 14 per cent from 795 units in the same period of 2012. A 42 per cent year-over-year increase in multi-family starts in the quarter more than offset the 11 per cent reduction in single-detached construction. After three quarters, housing starts in Regina totalled 2,383 units, up seven per cent compared to the same period one year prior.

From July to September, local builders initiated 367 single-detached units, down 11 per cent from the 413 units started in the same period one year earlier. Year-over-year gains were recorded in two of the three months during the quarter, with only September registering a decline from the previous year. Of the areas comprising the Regina CMA, the Central and Northwest zones reported the largest share in single-detached starts in the quarter, each representing 30 per cent of the total CMA production. After nine months, single-detached starts in Regina totalled 952 units, down eight per cent from 1,033 in the same period of 2012.

Despite the year-over-year reduction in single-detached starts, the number of units under construction increased to the highest level on record in September to 1,250 units compared to 1,150 a year earlier. At the same time, there were eight per cent fewer single-detached completions

Figure 2

Source: CMHC

during the third quarter, numbering 265 units compared to 287 in the corresponding period of 2012. Meanwhile, there were 272 single-detached homes absorbed in the third quarter, four per cent less than in the same period a year earlier. With absorptions surpassing completions in the quarter, the inventory of complete and unabsorbed single-detached homes declined from the second quarter of this year. Nonetheless, at 74 units in September, this was still 23 per cent higher than the 60 units recorded in September 2012 and above the five-year average of 44 units that local builders have maintained as inventory.

The average absorbed price for single-detached homes in the third quarter stood at \$506,322, up eight per cent from the same period in 2012. The gain in price can partly be attributed to compositional factors as the share of homes absorbed at prices above \$500,000 increased to 33 per cent in the third quarter from 30 per cent in the same period one year prior. By comparison, contractor selling prices reported by Statistics Canada's New

House Price Index (NHPI) for Regina rose by an average 2.7 per cent to the end of August 2013 from the previous year.

Multi-family starts, which consist of semi-detached, row, and apartment units, totalled 541 units during the third quarter, up 42 per cent from 382 units one year prior. Apartment starts contributed 363 units to this total, up from 197 units a year ago. Row starts also reported an increase to 142 units in the third quarter from 61 in the same period one year earlier. Semi-detached starts, however, declined by 71 per cent to 36 units from 124 under the same comparison. With the third-quarter gain, multi-family starts to the end of September were 21 per cent higher than the previous year. Of the 1,431 multi-family units started during the first nine months of 2013, just over 40 per cent or 574 units were for the rental market. This contrasts sharply with the 223 rental units initiated during the first nine months of 2012.

The number of multi-family homes absorbed in the third quarter

Figure 3

Source: CMHC

increased 6.7 per cent to 159 units from the same period of 2012. By contrast, there were 476 multi-family homes completed in the third quarter, 43 per cent more than in the same period one year prior. Of these, 310 were of rental tenure while the other 166 were in the ownership market. The inventory of complete and unabsorbed multi-family homes in the ownership market stood at 51 units at the end of September, up 42 per cent from corresponding levels in 2012. Of this inventory, 32 were apartment units, with the balance being semi-detached and row units. With the volume of units under construction up 95 per cent to 2,306 in September, this could lead to a further rise in inventories in the months ahead.

Existing Home Market

Residential MLS® sales in Regina picked up pace in the third quarter compared to the same period in 2012. Year-over-year gains were recorded in each month during the quarter, with September reporting the largest increase. Overall sales during the third quarter totalled 1,096 units, up 10 per

cent from the same period one year prior. However, due to slower activity in the first half of the year, year-to-date resale transactions in Regina totalled 2,927 units, down 9.5 per cent from the same period of 2012. A number of factors including price gains and competition from the new home market contributed to the lower sales over the first nine months of the year.

Active listings during the third quarter averaged 1,878 units, up 32 per cent from the same quarter a year ago. With listings growing faster than sales, the sales-to-active listings ratio declined to an average 19.5 per cent in the third quarter compared from 23.4 per cent in the same period of 2012. Given these conditions, homes spent a few more days on the market with the listing period averaging 37 days during the third quarter compared to 34 days in the third quarter of 2012.

With the resale market remaining in balanced conditions, MLS® residential prices increased four per cent in the third quarter to an average of \$313,388. The gain can partly be attributed to a compositional shift towards homes selling above \$350,000 whose share of total sales increased to 34 per cent in the third quarter from 31 per cent in the same period one year prior. After nine months, the average resale price in Regina rose 4.6 per cent to \$313,778, up from \$299,999 a year earlier.

Economy at a Glance

Average employment in Regina expanded 6.7 per cent to 133,700 positions during the first nine months of 2013, compared to 125,300 in the corresponding period of 2012. This represented the addition of 8,400 new jobs comprising 6,200 full-time and 2,200 part-time positions. With additions to the labour force trailing the pace of employment expansion, Regina's seasonally-adjusted unemployment rate declined to 3.0 per cent in the third quarter from 3.7 per cent in the second quarter of 2013. Notwithstanding the strong gains in employment and a low unemployment rate, average weekly earnings in Regina decreased by 2.6 per cent in the third quarter to \$942 from \$967 in the corresponding period of 2012.

While Saskatchewan's economy continues to expand, economic prospects are improving in other regions within Canada, particularly in Alberta. As a result, net migration to Saskatchewan moderated during the first two quarters of 2013. A total of 8,134 net migrants arrived in Saskatchewan during the first half of the year, down 7.3 per cent from the corresponding period in 2012. The reduction in net migration can largely be attributed to a 23 per cent decline in net international migration, which recorded 4,677 new arrivals through June compared to 6,045 people over the same period a year earlier. A total of 868 net migrants from other provinces within Canada moved to Saskatchewan during the first six months of 2013 compared to 1,236 people in the same period of 2012. On the positive side, a net total of 2,589 non-permanent residents arrived in the province during the first half of 2013 compared to 1,498 in the same period a year ago. Despite the overall moderation, net migration remains an important driver of population growth, new household formation, and housing demand in Saskatchewan this year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
