Winnipeg Housing Starts Slow in May

Home builders in the Winnipeg Census Metropolitan Area (CMA) broke ground on 288 units in May 2013, less than half of the 685 units started in May 2012. The decline was exclusively in the multi-family sector, which can vary widely from month to

month. Nonetheless, the year-to-date total of 1,734 housing starts was 2.5 per cent higher than the 1,692 units recorded in the first five months of 2012.

Builders started 260 single-detached homes in May, two per cent more than the 255 initiated in May 2012. As a result, the number of single-detached homes started in the first five months of 2013 amounted to 940 units, an increase of 15 per cent over the same

period last year. Meanwhile, finishing touches were put on 206 single-detached homes in May, substantially less than the 379 homes completed a year ago. However, owing to a high number of completions earlier in the year, the number of homes completed year-to-date totalled 898 units, 47 per cent more than were completed during the same period of 2012. There were 1,258 single-detached homes under construction at the end of May, four per cent more than at the end of May 2012.

There were 195 single-detached homes absorbed in May 2013, 41 per cent fewer than the 332 absorbed in May of 2012. Nonetheless, the number of units absorbed in the first five months of 2013 was 837 units, 32 per cent more than the corresponding period last year. This brought the inventory of completed and unoccupied single-detached homes available at the end of May to 268 units, up 68 per cent from the 160 units in inventory at the end of May 2012, and 40 per cent higher than the preceding five-year average of 191 units. Total supply, which

includes units under construction and inventory, stood at 1,526 units at the end of May, which was 12 per cent higher than where it stood one year earlier. At the current 12-month average rate of absorption, this represents nine months of supply.

The average absorbed price of a new single-detached home in the Winnipeg CMA in May 2013 was \$414,694, nine

per cent higher than in May of 2012. As a result of lower average prices earlier in the year, the year-to-date average price was lower at \$406,719, yet still represented an increase of 4.2 per cent over the average price of \$390,383 recorded in the first five months of 2012.

The multi-family sector, which includes semi-detached units, rows, and apartments, saw foundations poured on only 28 units in May 2013, a fraction of the 430 units started during the same month one year earlier. To the end of May, multi-family starts numbered 794 units, nine per cent fewer than were started during the first five months of 2012. Of these, 722 units were apartments, 28 were row units, while the remaining 44 were semi-detached units. With many projects started in recent months, the number of multi-family units under construction at the end of May 2013 was 2,436, 30 per cent more than the 1,870 units at the end of May 2012.

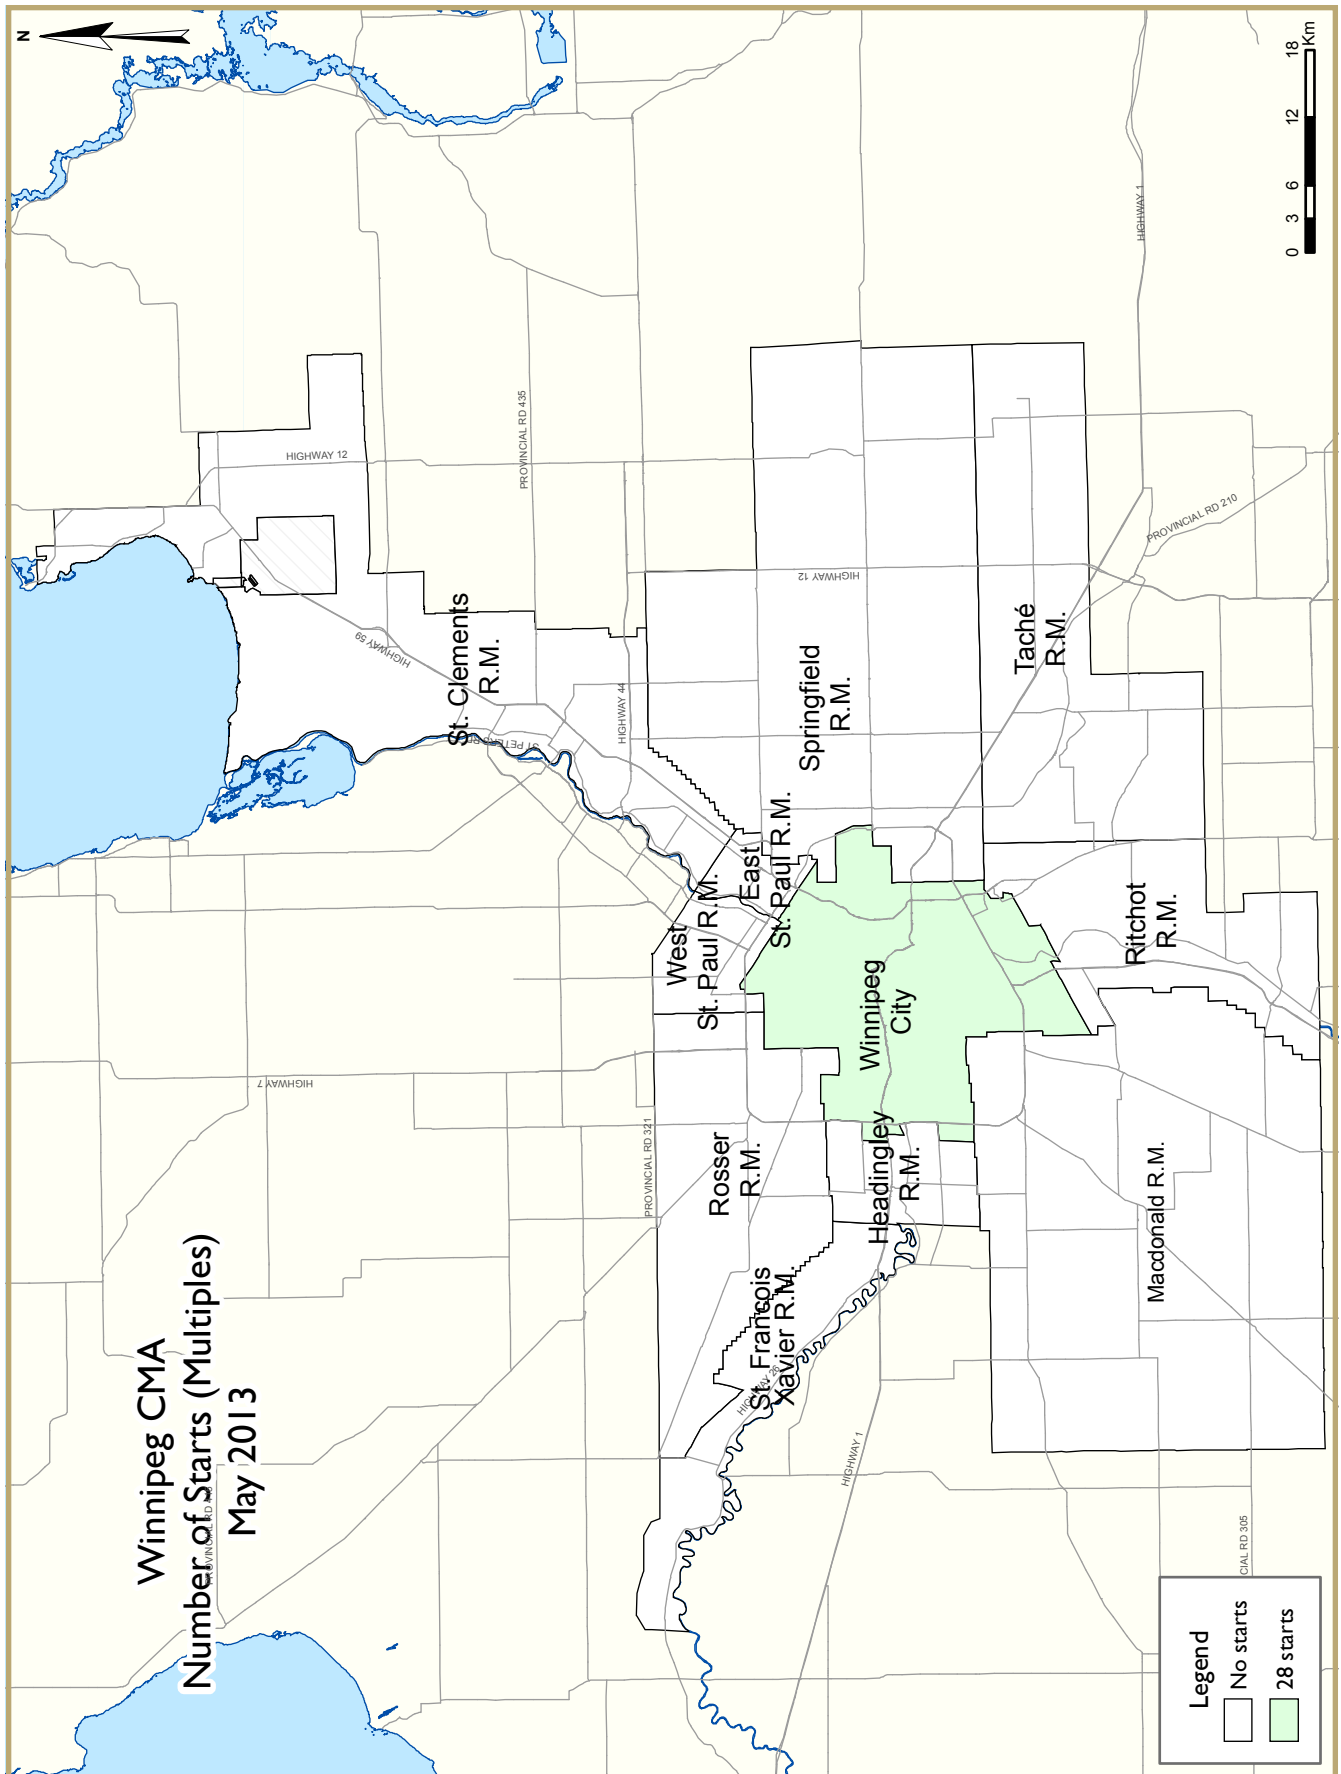

Figure 3

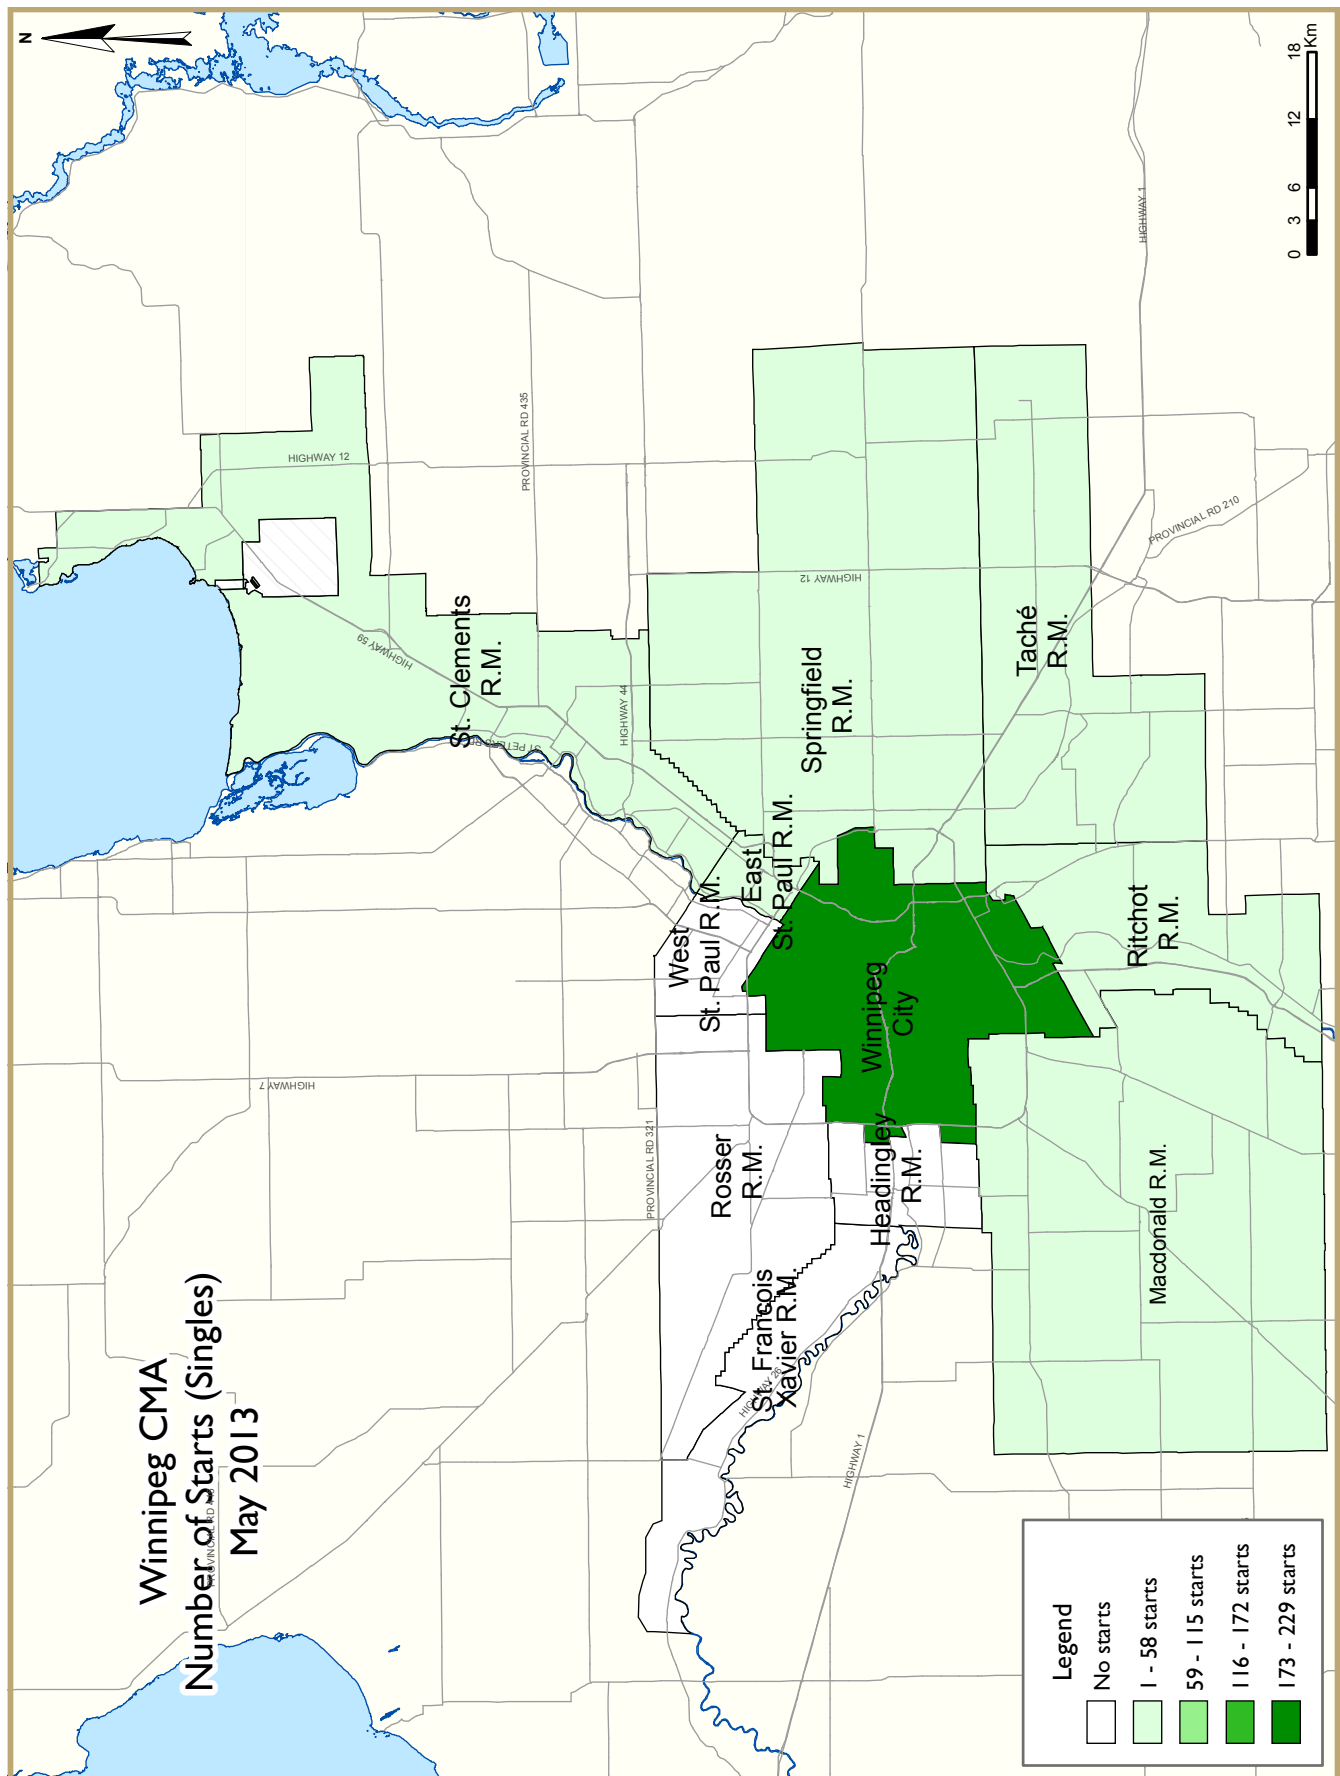

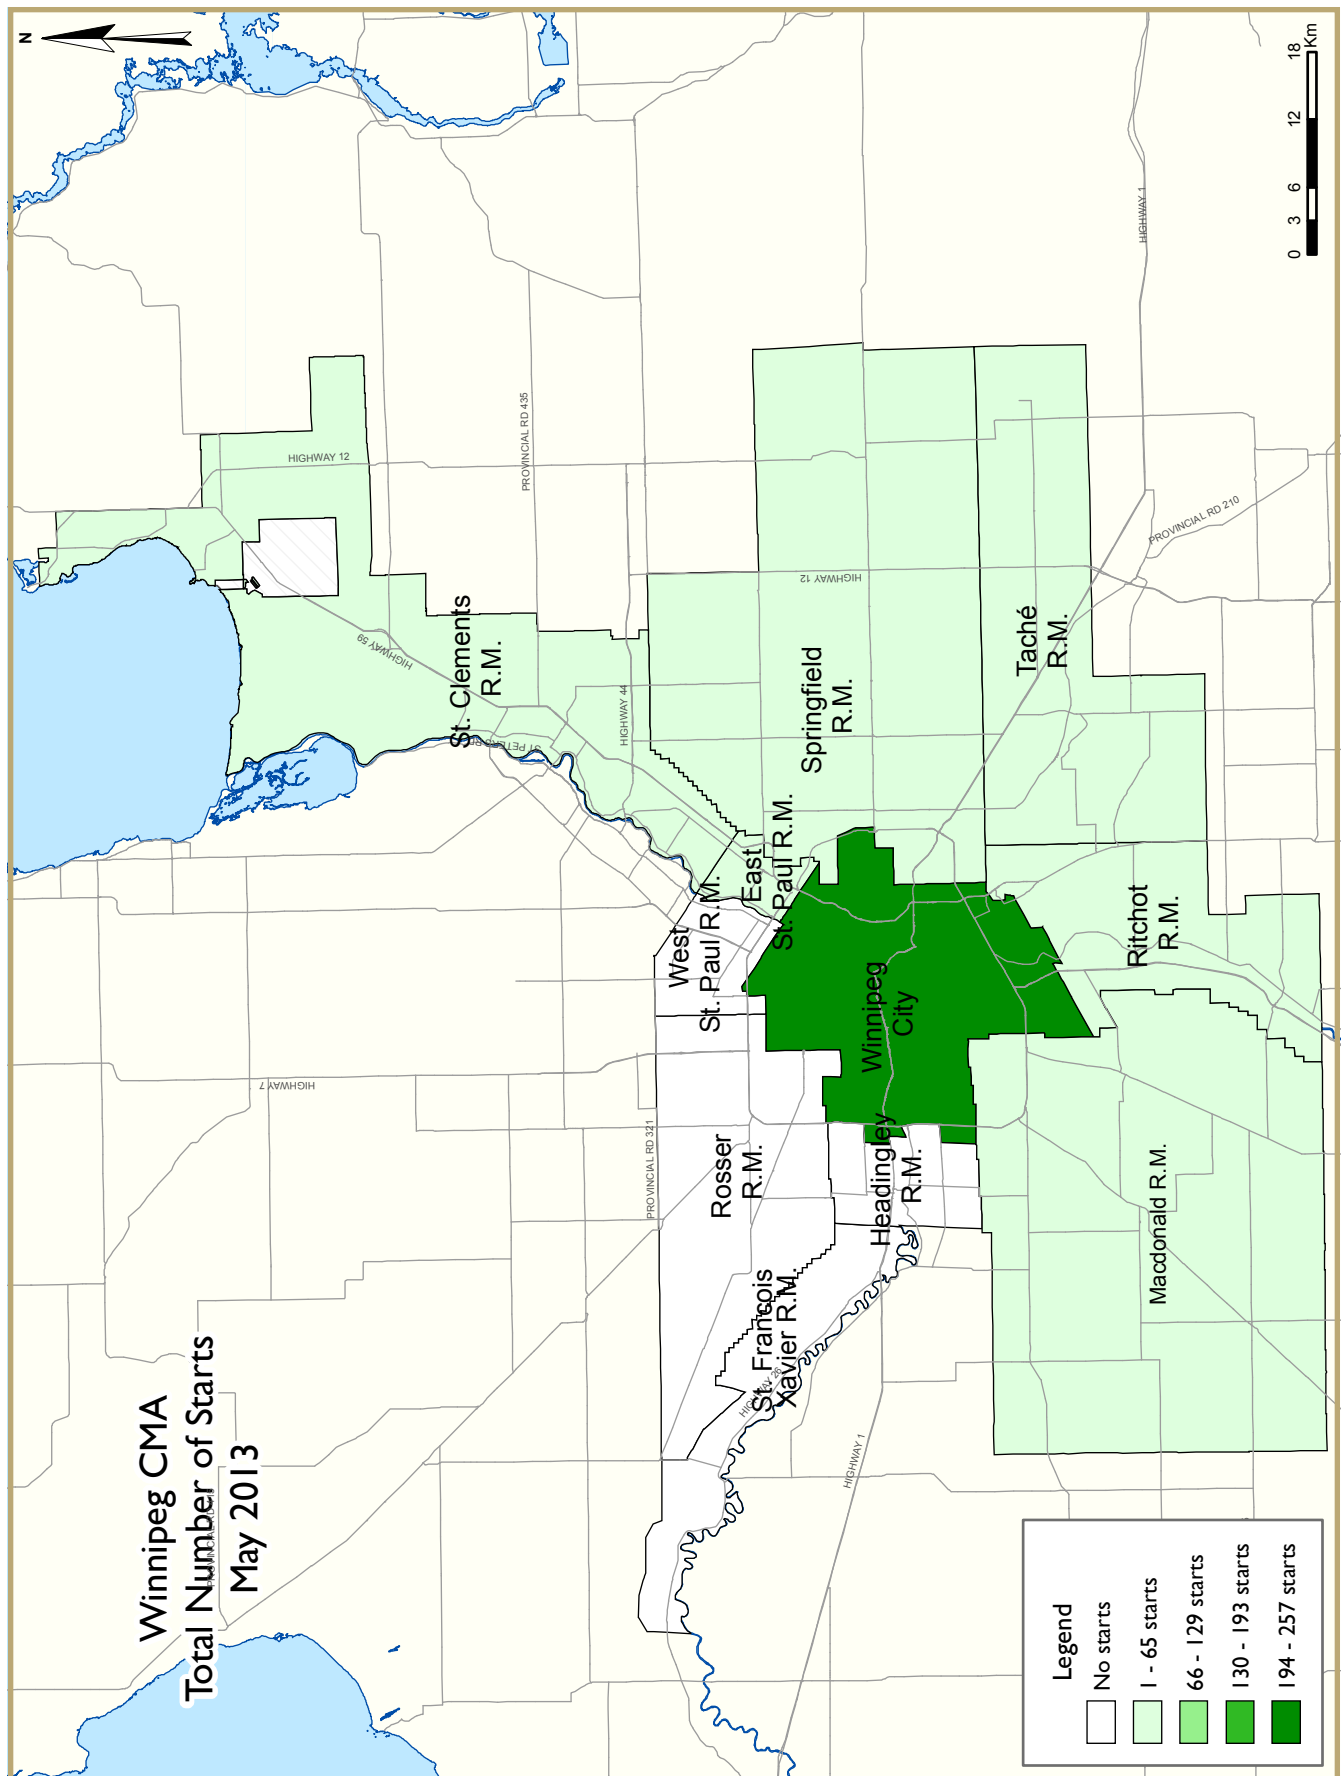

Source: CMHC (*excludes rental)

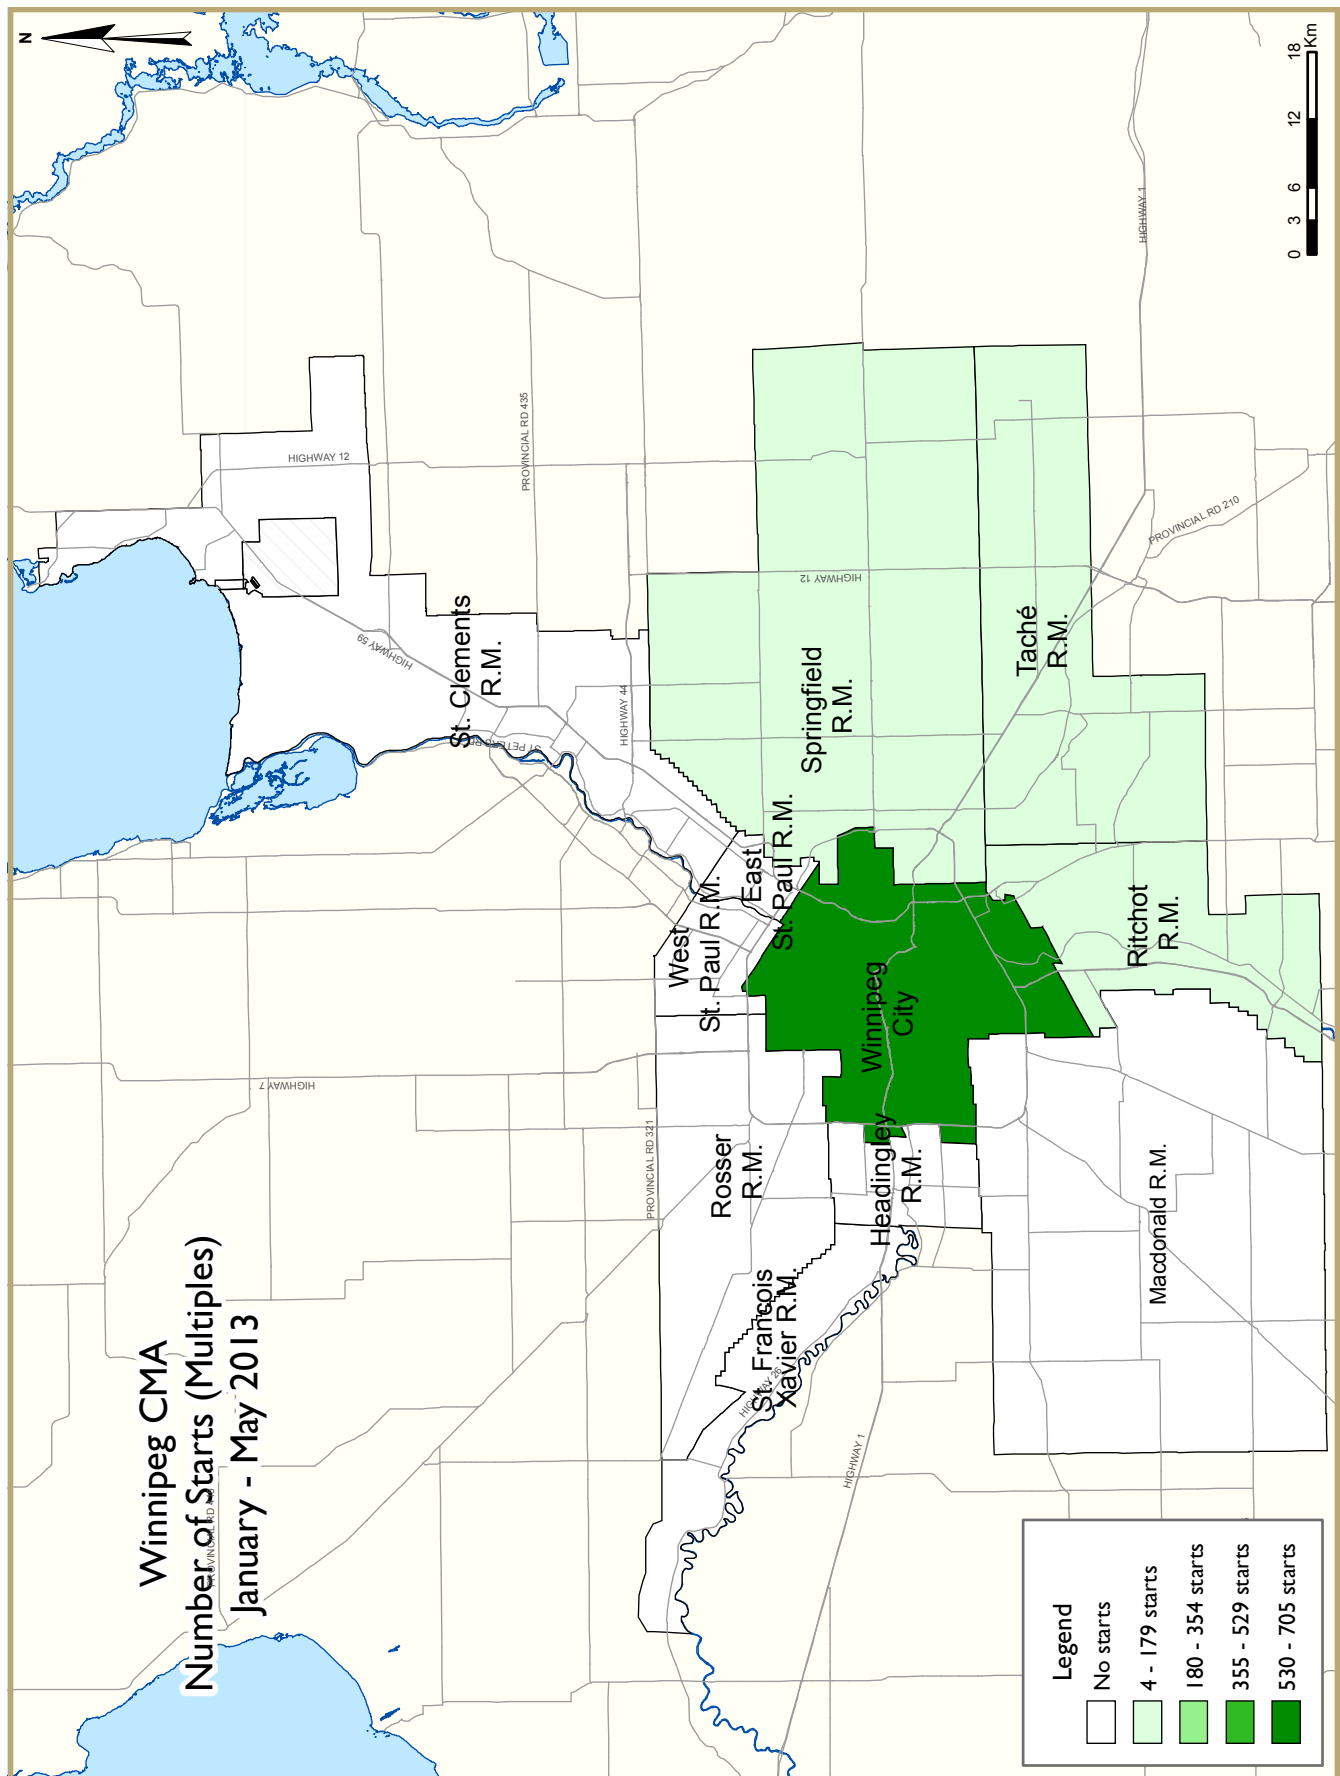

There were 84 multi-family units completed in May, 38 per cent more than the 61 one year earlier. This brought the number of completions during the first five months of 2013 to 228 units, 19 per cent fewer than during the same period of 2012.

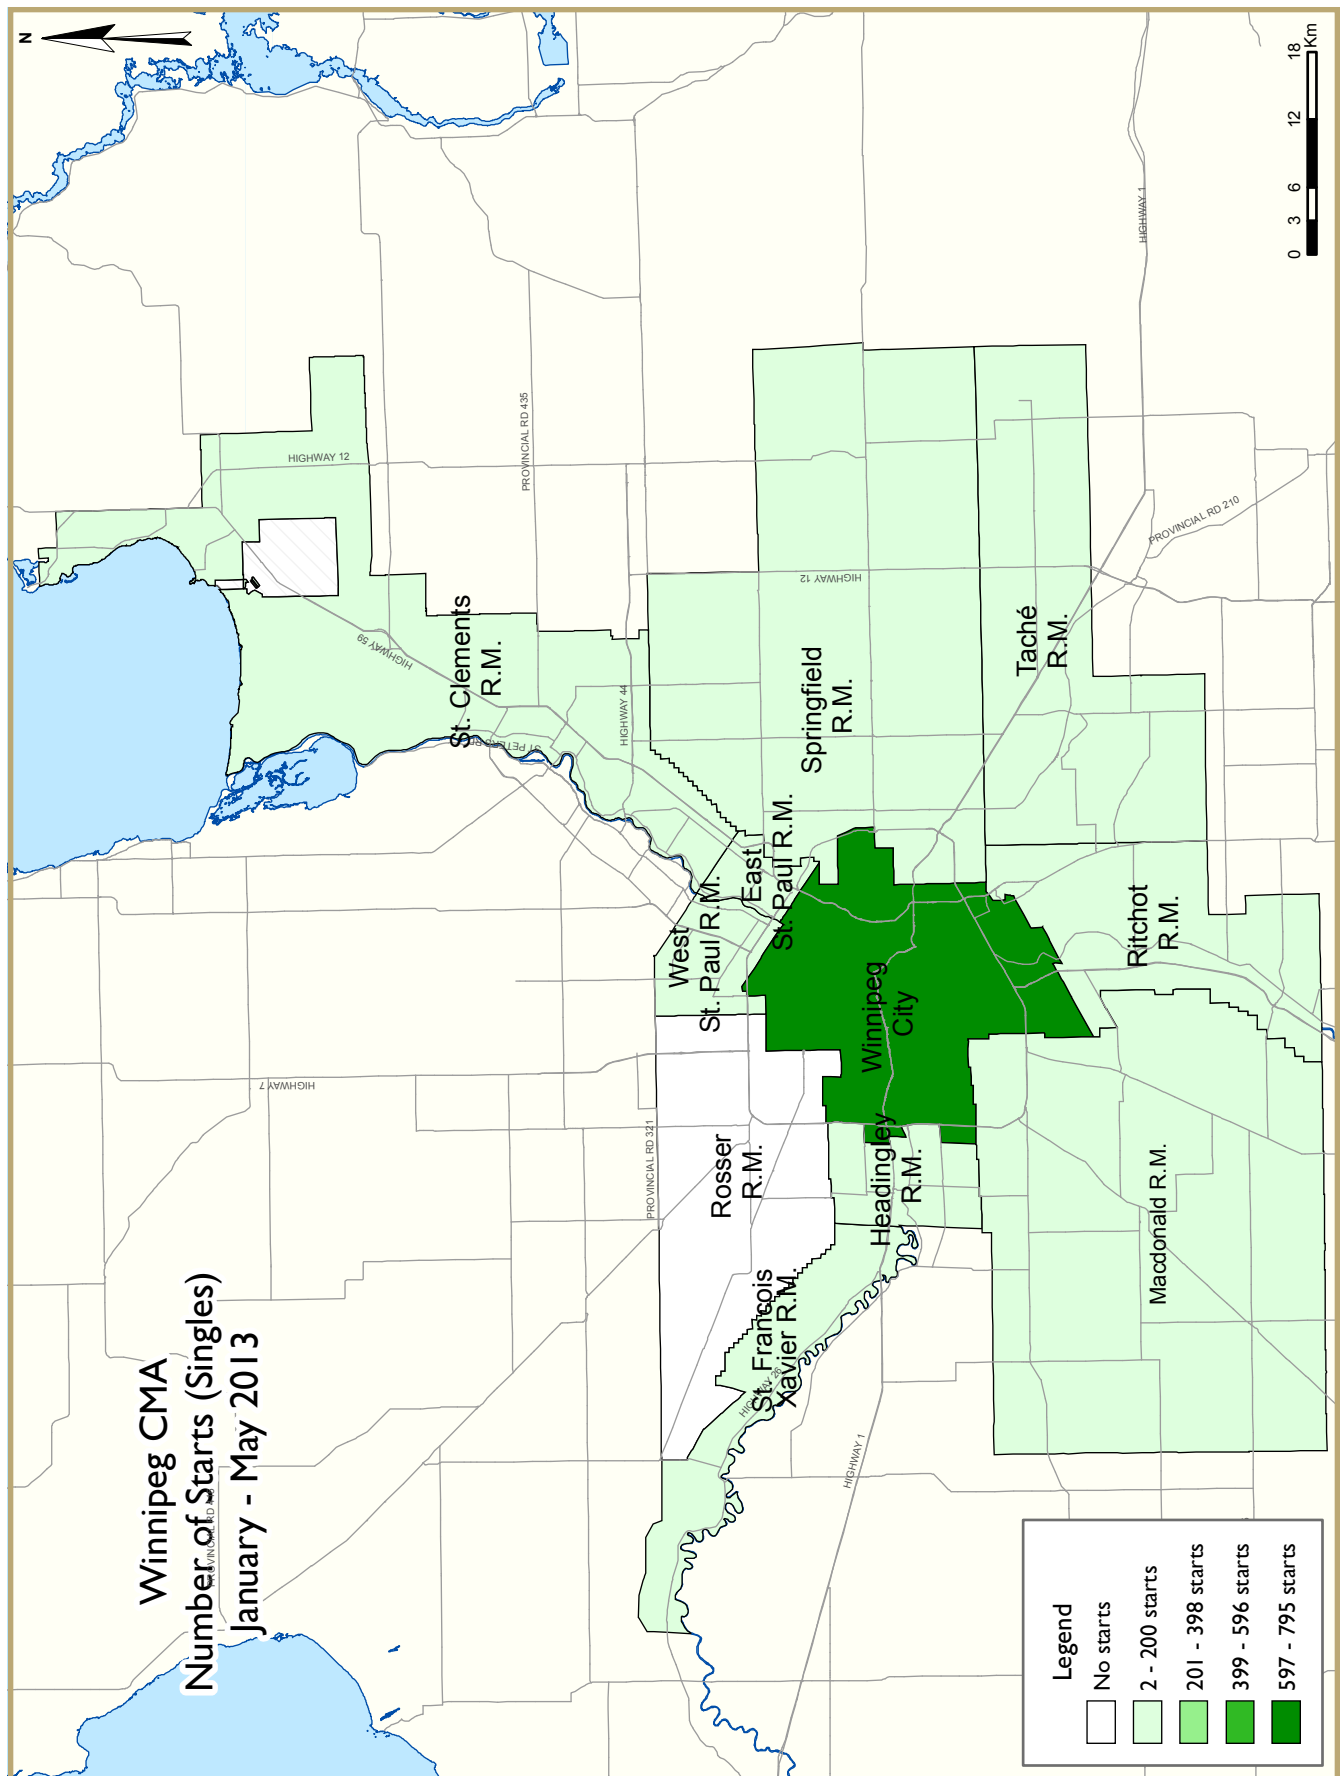

There were 34 condo and freehold multi-family units absorbed in May, five fewer than were absorbed in May 2012. Year-to-date absorptions in the ownership market now number 159 units, down three per cent from the first five months of 2012. The inventory of multi-family units available for ownership at the end of May 2013 stood at 148 units, substantially more than the 66 units in inventory during the same month one year ago. At the current 12-month average rate of absorption, this represents three months of inventory for this market, up from 1.5 months one year earlier.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca or follow us on [Twitter](#), [YouTube](#) and [Flickr](#).

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
