

HOUSING NOW

Hamilton and Brantford CMAs

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: October 2013

Hamilton CMA Highlights

- Hamilton housing starts trending down.
- Multiple-family housing starts in the City of Hamilton a drag on total starts.
- Existing home sales at highest level since third quarter 2011.

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate.

¹ The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Hamilton CMA total housing starts trending down

Housing starts in the Hamilton Census Metropolitan Area (CMA) were trending lower at 2,451 units in September compared to 2,827 units in August, representing three consecutive monthly contractions. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The decrease in September was entirely due to weaker construction of multiple-family housing in the City of Hamilton.

Meanwhile, total housing starts in the City of Burlington and the Town of Grimsby were up due to higher level of townhouses. Year-to-date, townhouse starts in the City of Burlington have reached 153 units, up from 90 units recorded in the first nine months of 2012. At the same time, single-detached starts have declined by 21 per cent during the same period. This trend underscores the shift in preference towards less expensive dwellings, as the price gap between Burlington and Toronto narrows.

Existing Home Market

Sales at highest level since third quarter 2011

In the third quarter 2013, seasonally adjusted existing home sales in the Hamilton CMA advanced to their highest level in two years. The increase in mortgage rates during the summer prompted some potential homebuyers to buy before their pre-approvals

expire. Consequently, an increased number of financially stable young professionals, who were once on the side lines, moved their home purchasing forward which resulted in higher sales during the second and third quarters of 2013.

Hamilton home sales have completely recovered from their steep decline seen in the second half of 2012. Year-to-date, approximately 10,600 homes have changed hands across the CMA, an increase of one per cent from the first nine months of 2012. The increase compared to year-ago level reflects tighter mortgage rules introduced last summer, which dampened resale activity. At the current monthly sales rate, it would take about 2.8 months to sell the inventory (active listings) of existing homes on the market, down from the September 2012 level of 3.8 months, according to data from the Realtors Association of Hamilton-Burlington. On a year-over-year basis, the third quarter increase in sales occurred across all local areas, with the exception of Dundas and Flamborough.

New-listings outpaced sales

The number of new listings in the Hamilton CMA increased faster than sales in the third quarter 2013. New-listings in the third quarter were higher than a year earlier in eight out of twelve local markets. Hamilton Mountain posted a double digit growth, followed by Burlington and Dundas. The sales-to-new-listings ratio declined slightly to 70.5 per cent from 71.6 per cent in the second quarter, a level which still speaks of very tight market. Despite the modest increase in new-listings, the resale market remains firmly in sellers' territory, where it has been since the first quarter 2011.

In response to the increase in buyers' choice, the seasonally adjusted average existing home price in the Hamilton CMA rose by only 0.4 per cent, the smallest quarterly increase in a year. However, on a year-over-year basis, the average price grew significantly from the third quarter 2012. The average price growth was widespread across all local areas, with the exception of Glanbrook and Grimsby,

Figure 2

where prices declined modestly.

In the third quarter 2013, the market share of existing homes sold at \$750,000 or more increased to seven per cent from five per cent in the same quarter a year earlier. More specifically, the market share

of homes sold at \$400,000 or more reached 35 per cent, up from 29 per cent in the third quarter 2012. Conversely, existing homes that cost less than \$200,000 lost market share, as more out-of-town buyers opted for homes which were priced above average. High-end homes were mainly

supported by steady income growth among the move-up homebuyer segment (aged 45 to 64). Year-to-date, job creation among this age group increased by 0.6 per cent compared to the first nine months of 2012.

Hamilton CMA ranked seventh in Canada for long commute to work

Recent data released by Statistics Canada confirm a growing commuting trend in Hamilton. Close to one-in-five commuters spent 45 minutes and over to get to work. As a result, Hamilton CMA is ranked seventh in Canada for the longest commuting time behind Oshawa, Toronto, Barrie, Montréal, Vancouver, and Abbotsford-Mission. In Hamilton, the age group 25 to 44 represents approximately one-in-two of those commuters. This age group typically has the highest proportion of first-time homebuyers, which helps explain the commuting pattern in the Hamilton CMA. The current trend reflects an ongoing movement of homebuyers from the GTA in search of more affordable ownership housing.

Notable factors influencing out-of-town buyers include: house price difference between Toronto and Hamilton; better and expanded GO service; and a resurgence of

Hamilton's downtown core. With the transformation of some dilapidated buildings into luxurious lofts and offices, more people are turning their attention to the downtown core. As of September 2013, the average existing home price gap between Toronto and Hamilton reached \$143,000, up from \$97,000 a decade ago.

Close to One-in-Five Commuters in Hamilton Spent 45 Minutes and Over to Get to Work

Source: Statistics Canada, National Household Survey, 2011

Brantford CMA Highlights

- Brantford housing starts trending up.
- Lowest unemployment rate since December 2008.
- Existing home sales took a breather.

New Home Market

Total housing starts trending up in Brantford

Housing starts in the Brantford CMA were trending higher at 416 units in September compared to 400 units in August, suggesting that the local housing construction is gaining traction. Improving economic conditions and surging immigration from the more expensive neighbouring municipalities bolstered residential construction in the Brantford CMA. Employment has been growing faster than the labour force since the beginning of 2013. This has translated into lower unemployment rate in seven out of nine months. At 5.7 per cent, September 2013 marked the lowest unemployment rate since December 2008.

Housing starts in Brant County were up in September 2013, pushing the year-to-date total starts higher than the previous year. This increase was entirely due to strong townhouse construction. At the same time, housing starts in the City of Brantford were down across all dwelling types, with the exception of townhouse segment.

Figure 4

Existing Home Market

Brantford CMA existing home sales took a breather

The seasonally adjusted rate of existing home sales in the Brantford

CMA posted a steep decline in the third quarter, reversing all the gains recorded in the second quarter. The number of new-listings also decreased, but to a lesser degree. As a consequence, the sales-to-new-listings ratio drifted lower than the second quarter reading, but still in the upper bound of a balanced market. The third quarter decrease in the ratio

Figure 5

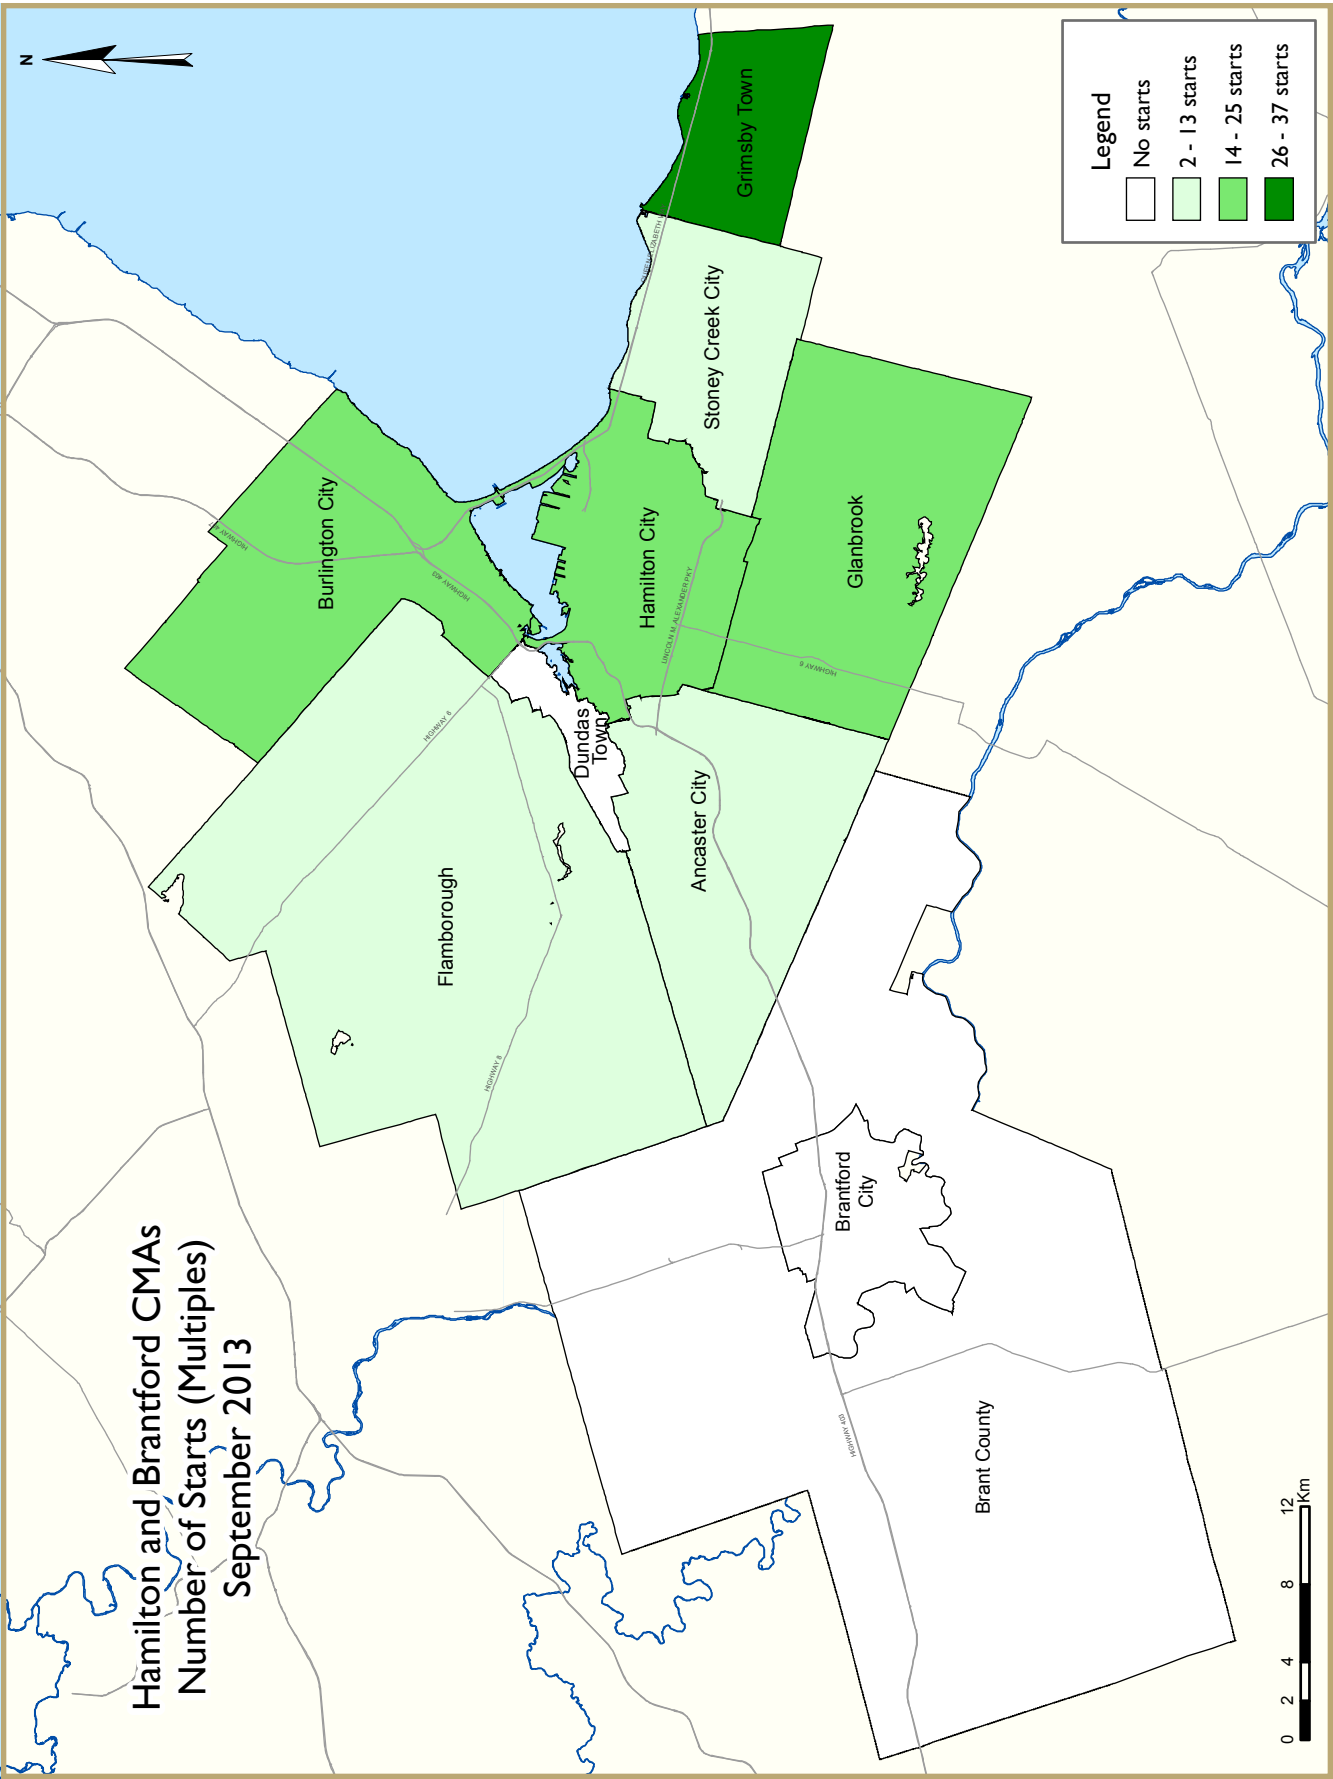

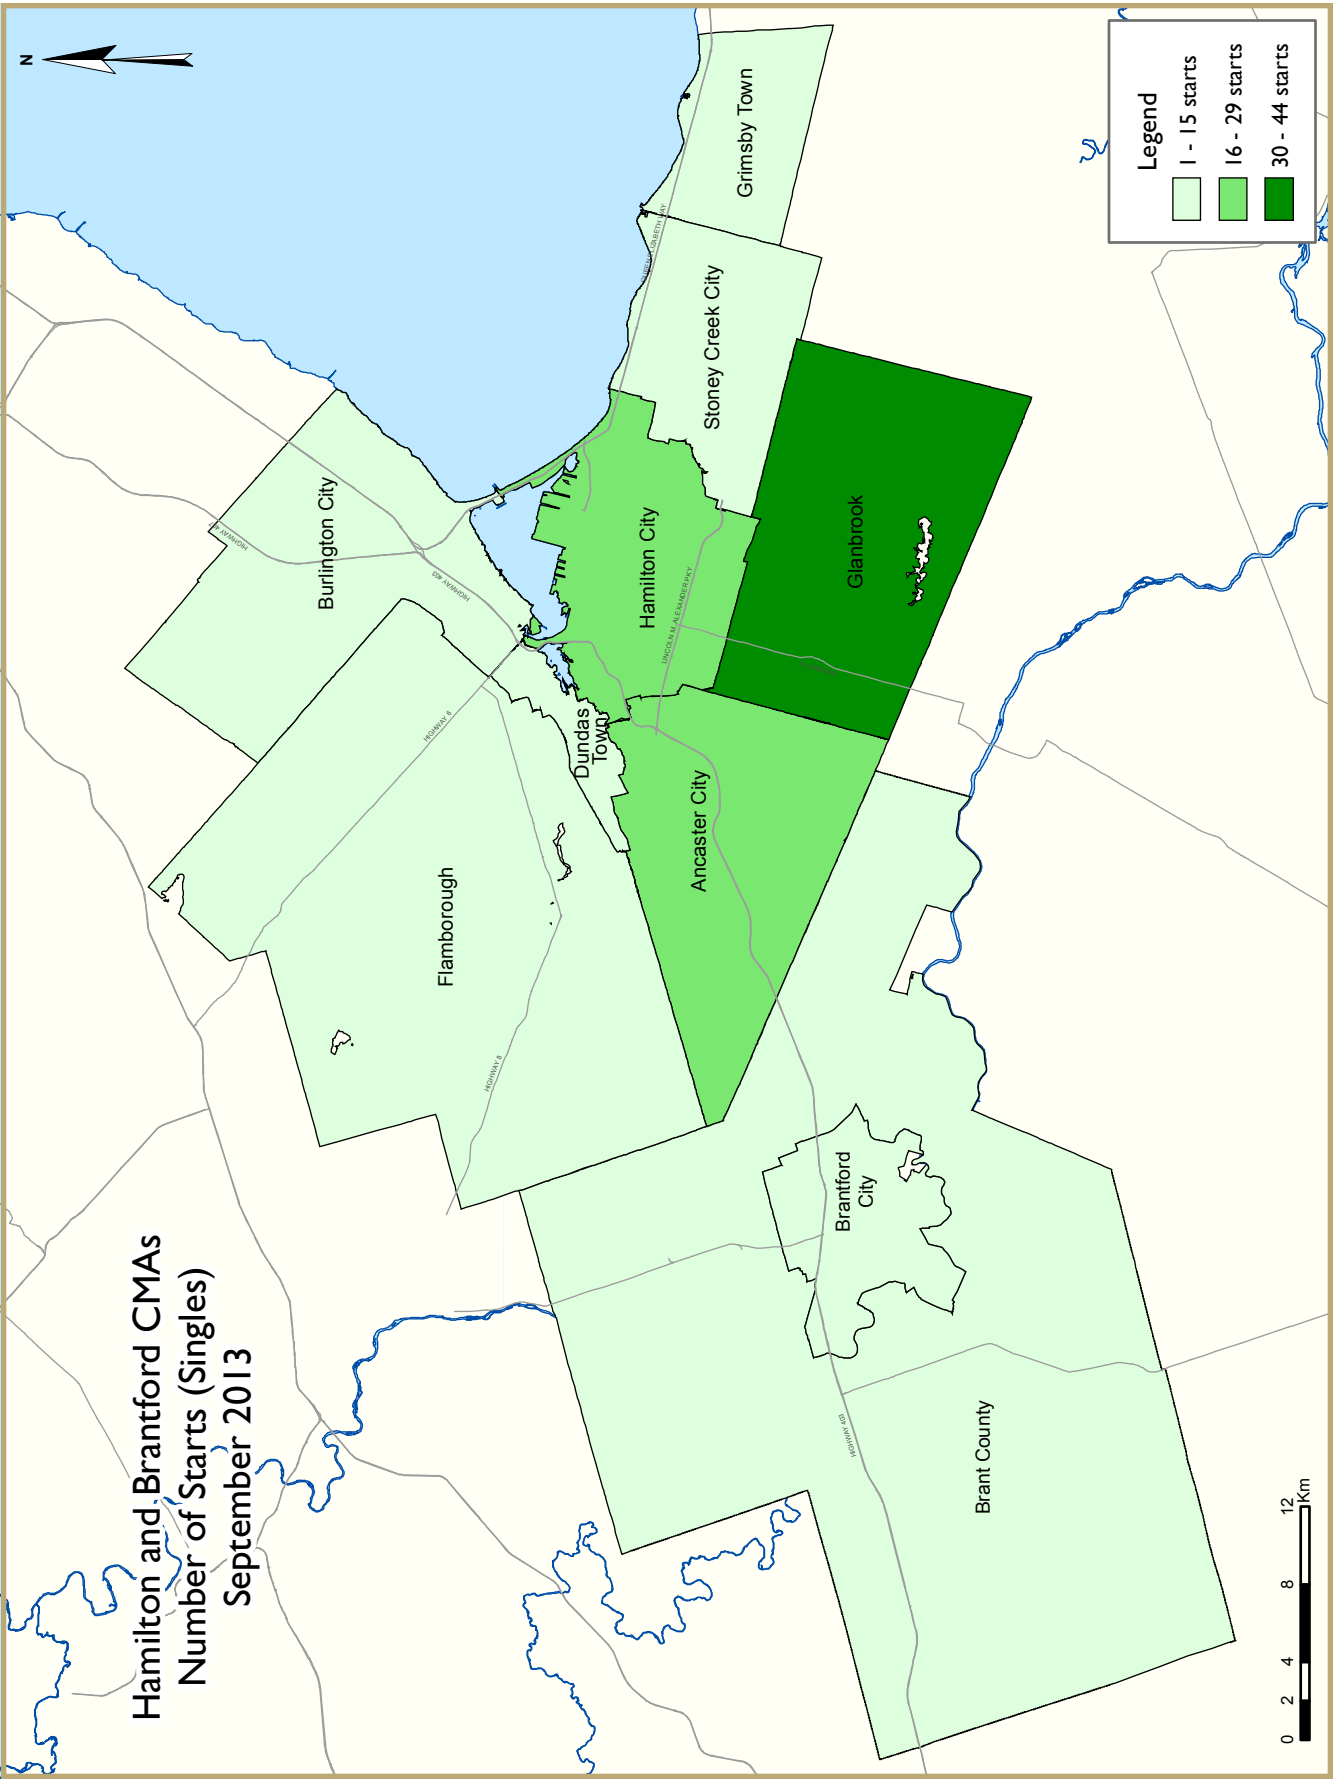

resulted in the seasonally adjusted average existing home price to drop marginally.

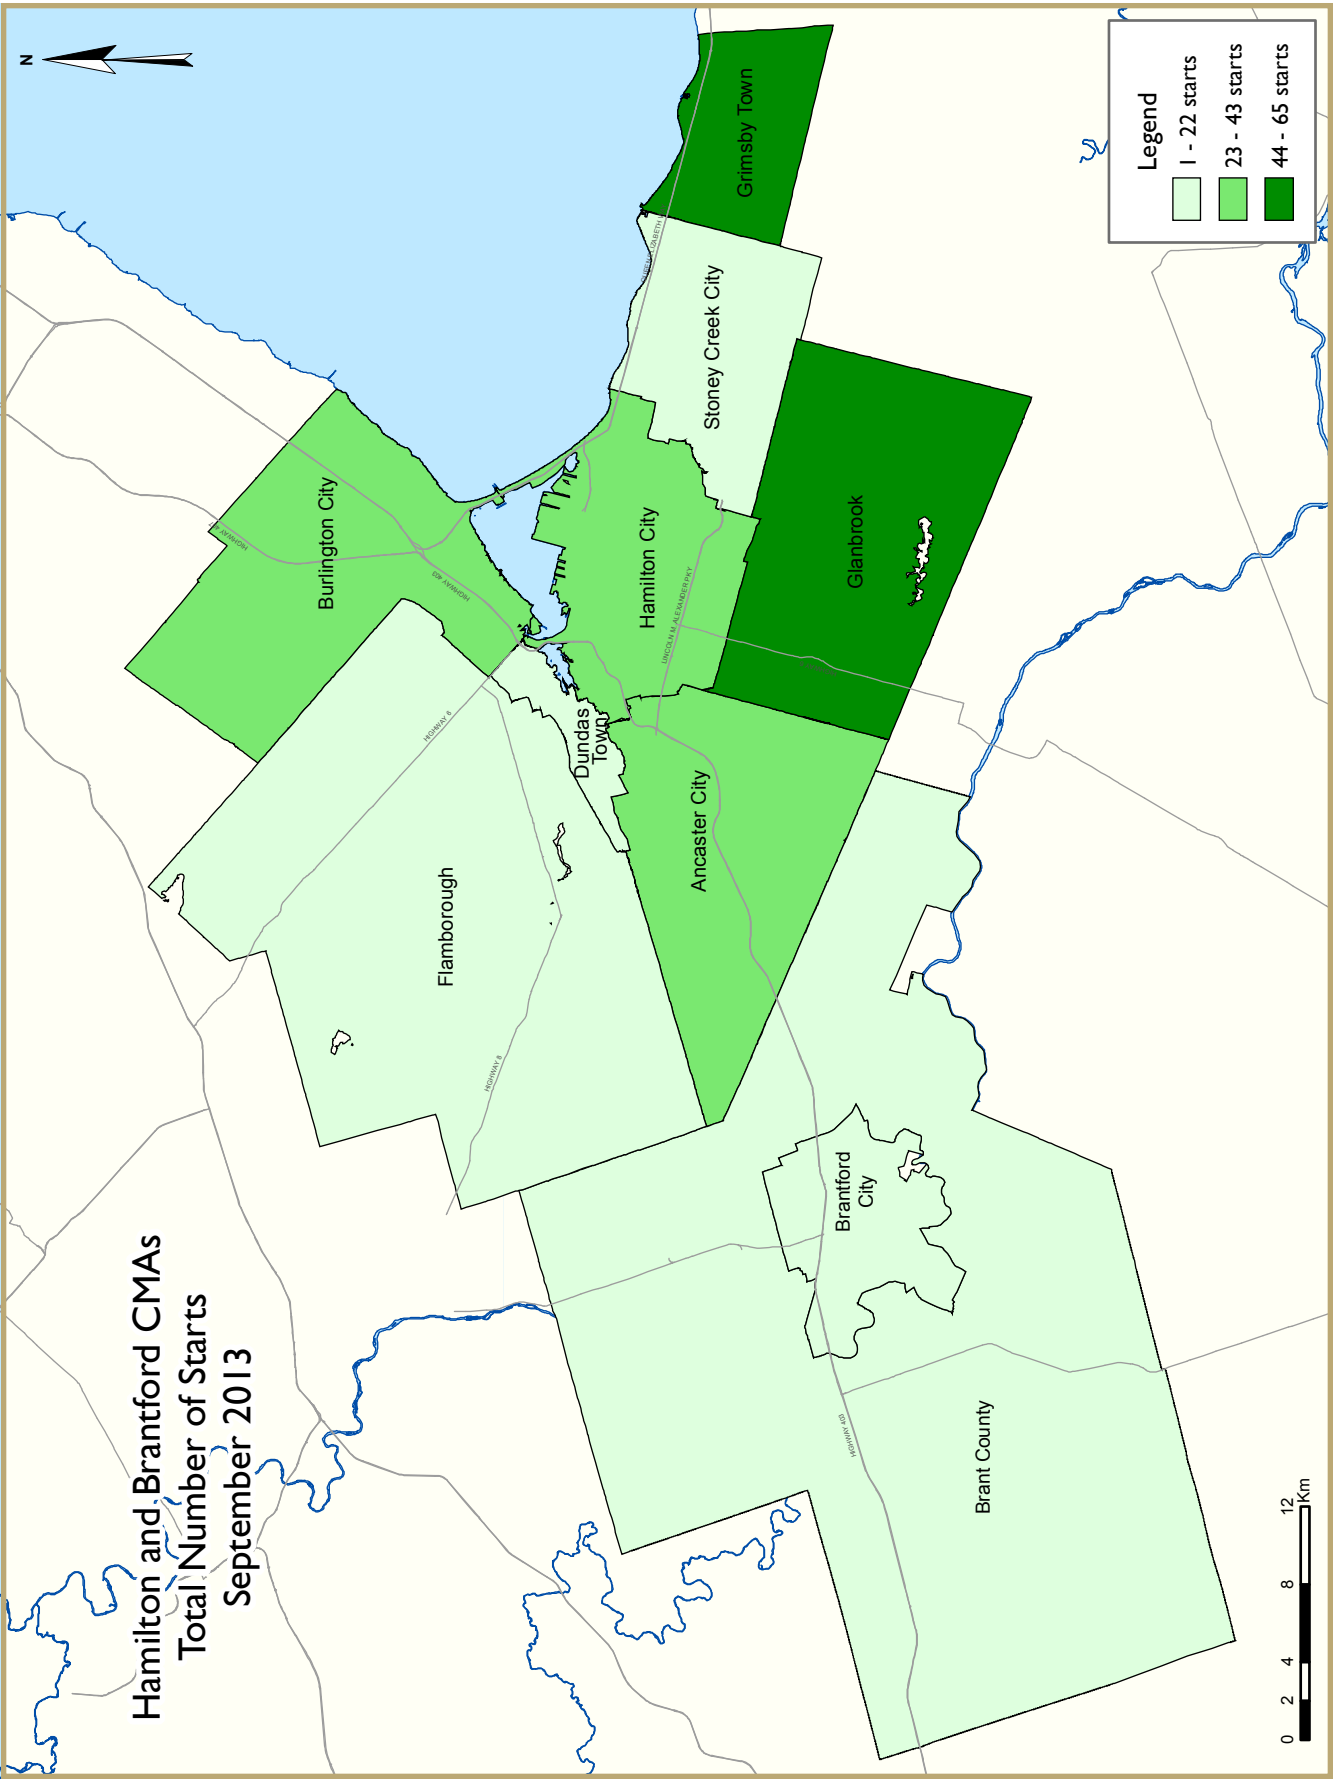

On a year-over-year basis, however, the average home price advanced by

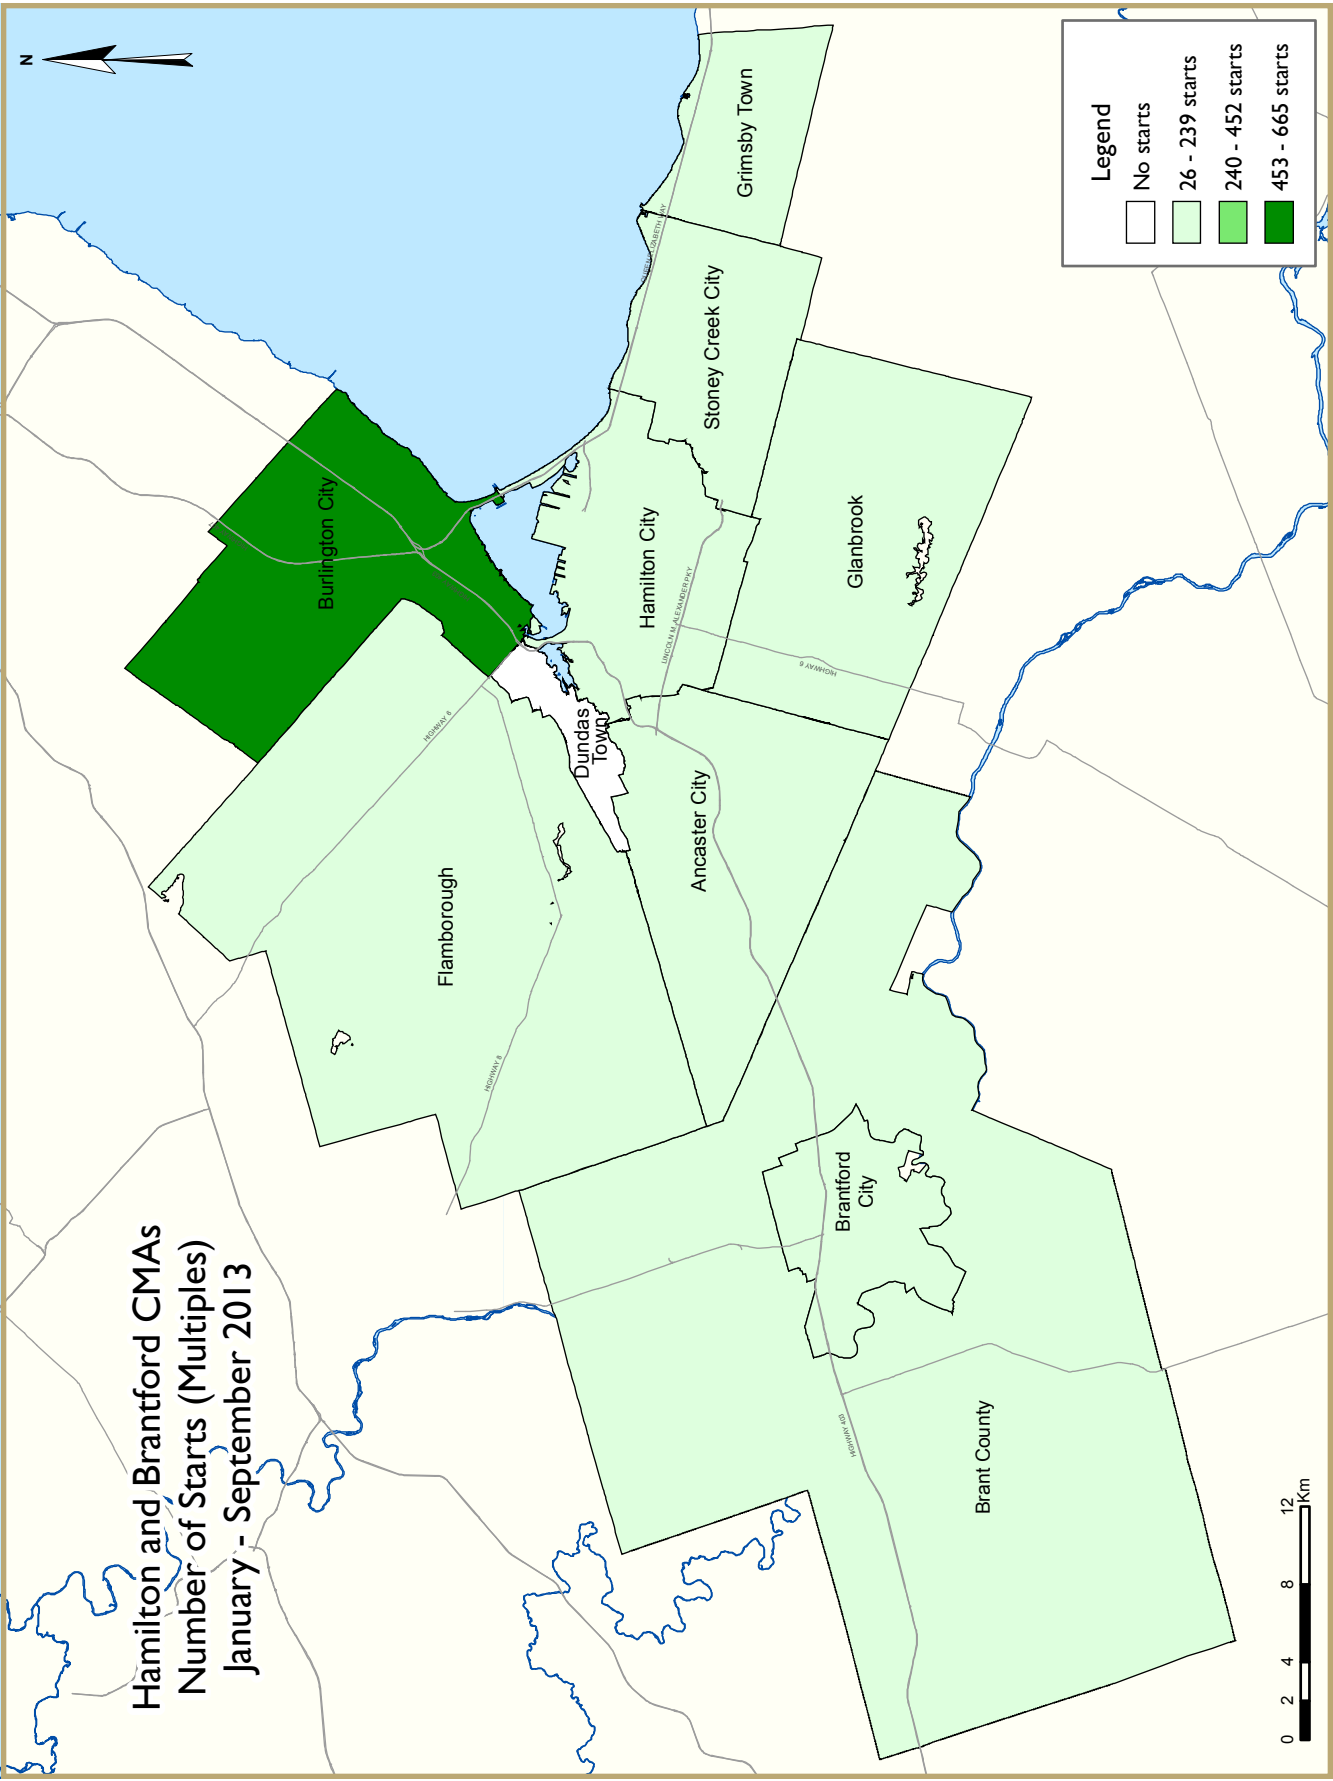

5.7 per cent compared to the third quarter 2012. Total sales in the first nine months of 2013 remained higher than the levels recorded during the same period in 2012. This may suggest that the existing home market in

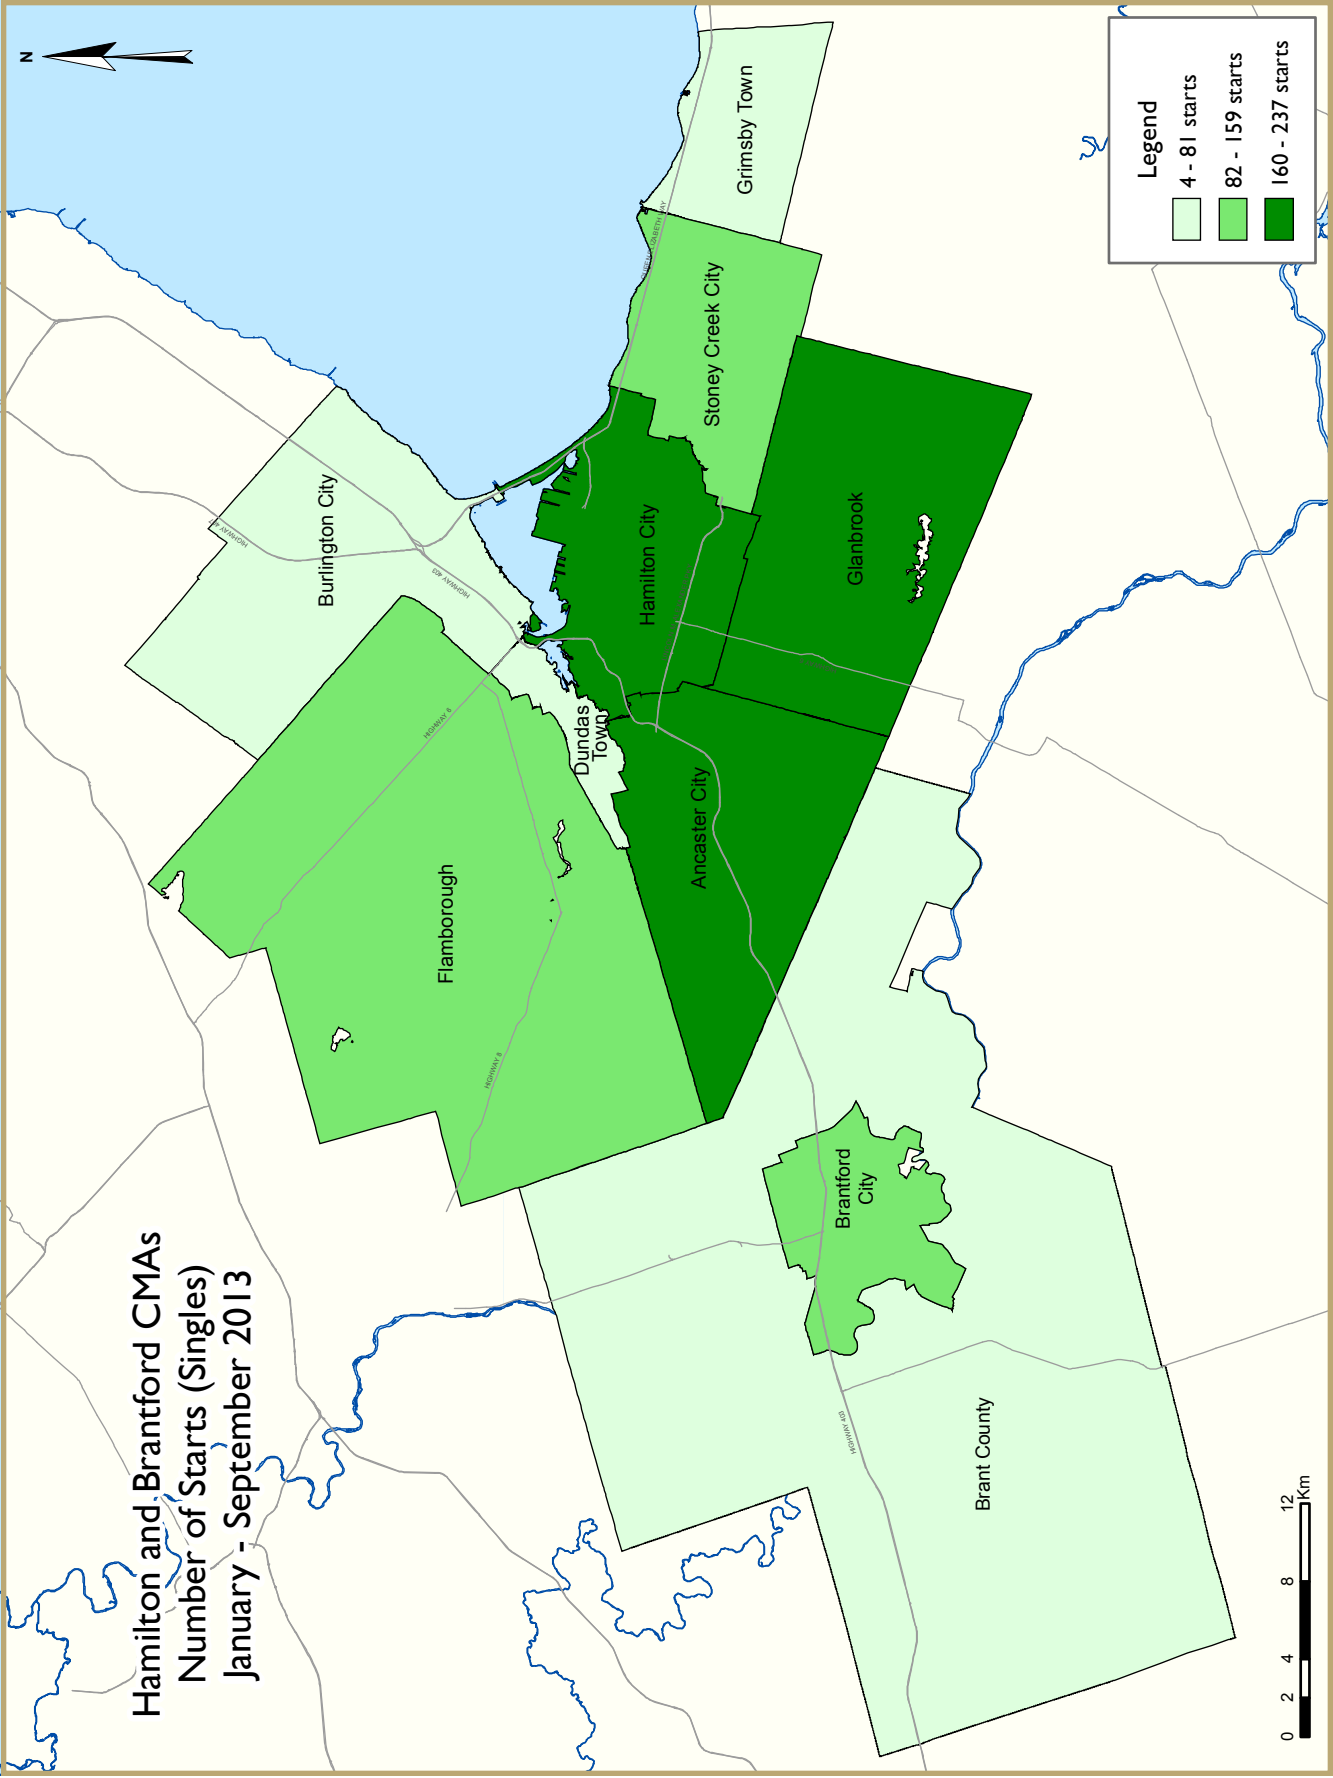

Brantford remains healthy. Full-time employment in the area has been strong and generating ownership demand.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
