

HOUSING NOW

St. Catharines-Niagara CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2013

New Home Market

In the fourth quarter, starts in the St. Catharines-Niagara CMA were up 77 per cent versus the same quarter of 2011. Annually, starts increased by 2.4 per cent or 27 units in 2012. Until the end of November, starts were down 11 per cent versus 2011. The increase in December was enough to push year-to-date starts above 2011. In Niagara Region*, starts were down

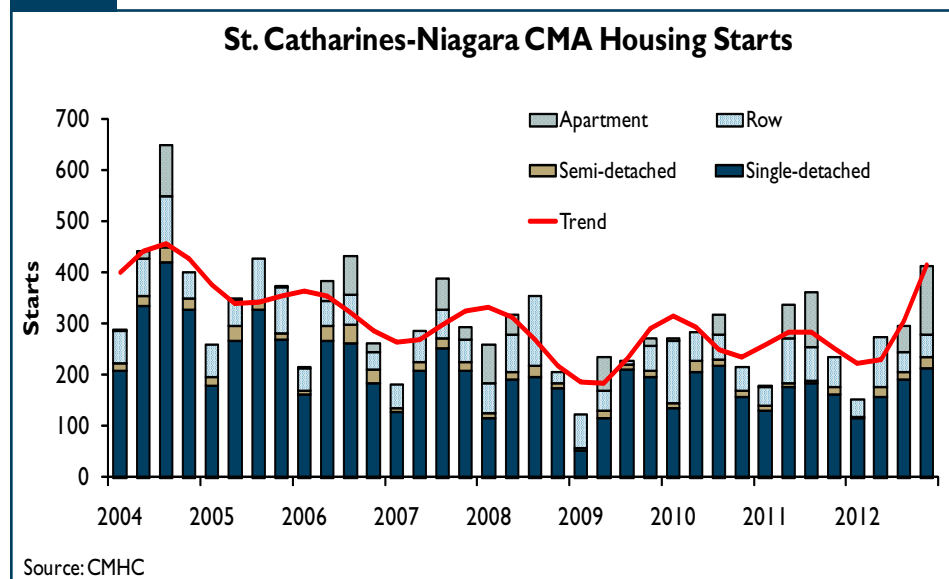

moderately on an annual basis due to much lower starts in Grimsby than there were in 2011.

The considerable amount of apartment construction in the fourth quarter is what elevated 2012 starts above 2011. In this quarter there was the most apartment construction in the CMA since the third quarter of 1994. Also, apartment construction in the CMA in 2012 was higher than

in any other year in the CMA. This comes after a previous record year in 2011. The bulk of the apartment units in the fourth quarter were in St. Catharines and Welland. All of these starts were rental units.

Row construction declined in the fourth quarter. Row housing was the only type where there was less construction in 2012 than in 2011. Until the end of the second quarter, row housing was the only type outpacing construction activity in 2011. However, row construction tapered off after mid-year. Although row starts dropped in 2012, most of the major markets for row construction - Welland, Niagara-on-the-Lake and St. Catharines - had fairly similar activity in both 2012 and 2011. In Niagara Falls, construction actually increased substantially. The drop in construction in Lincoln in 2012 explained the drop for the CMA.

Single-detached construction was up substantially relative to the fourth quarter of 2011. In the first half of 2012, single-detached starts were trending downward slowly. They began trending upward around mid-year. Although trailing 2011 starts for most of the year, after a strong fourth quarter, single-detached starts increased on an annual basis. Niagara-on-the-Lake and Niagara Falls combined for approximately 42 per cent of single-detached construction in 2012 and slightly higher than this in the fourth quarter. Welland also had a strong fourth quarter for single starts and had significantly more single starts in 2012 versus 2011. New house prices are lower than the CMA average in Welland. Welland may act as a lower-priced substitute to some of the other areas.

The average new home price for a single-detached dwelling was virtually unchanged between the fourth quarter of 2012 and the fourth quarter of 2011. This is in contrast to a 19 per cent increase between the third quarters of these years. Prior to the fourth quarter, there had been four consecutive quarters of double digit price increases in the CMA. This may imply that price growth is now slowing in the new home market. Nevertheless, on an annual basis, new home prices were up roughly 12 per cent.

Resale Market

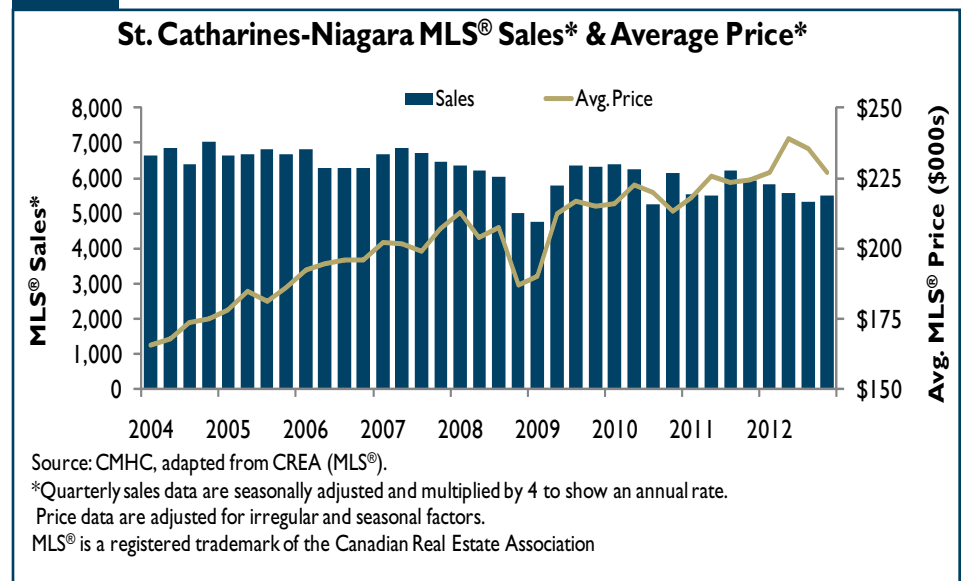

When compared to the fourth quarter of 2011, existing home sales dropped moderately in the Niagara region in the fourth quarter of 2012. Sales trended lower throughout all of 2012. However, this downward trend tapered off in the latter half of the year. On an annual basis, sales were down by roughly four per cent. Global financial uncertainty is still

present in the market. Also, although more restrictive mortgage insurance conditions introduced mid-year will support longer-term stability of the housing market, they tempered sales in the latter half of the year.

On an annual basis, new listings have dropped more than sales, at roughly 13 per cent. The sales-to-new-listings ratio was very stable on a quarterly basis throughout 2012 with the real decline in listings occurring in the second half of 2011. Since this time, with relatively stable listings and sales, the ratio fell between a 53-57 per cent range throughout 2012 on a quarterly basis. This indicates a balanced market.

The MLS® average price dropped in the fourth quarter on a seasonally adjusted basis. This is the second consecutive quarter of price decline. It appears that price has been lagging the decline in seasonally adjusted MLS® sales, which began in the fourth quarter of 2011. This reflects an easing

Figure 2

¹ MLS® is a registered trademark of the Canadian Real Estate Association (CREA).

of market conditions overall in the region, and also, to some degree, a tightening of mortgage insurance conditions at mid-year. Annually, the average price is up four per cent versus 2011 due to the strong price growth in the first two quarters.

In 2012, the resale market was less active in the three markets within

the region. Niagara Falls was the only market with stable sales versus 2011. In all markets, the annual decline in new listings was greater than the drop in sales. In this sense, the overall market tightened in 2012, moving from a 50 per cent sales-to-new-listings ratio in 2011 to 55 per cent in 2012. St. Catharines experienced

the largest percentage decline in both sales and new listings as well as the smallest increase in the average price. The average price increased by the most in Welland at just over six percent.

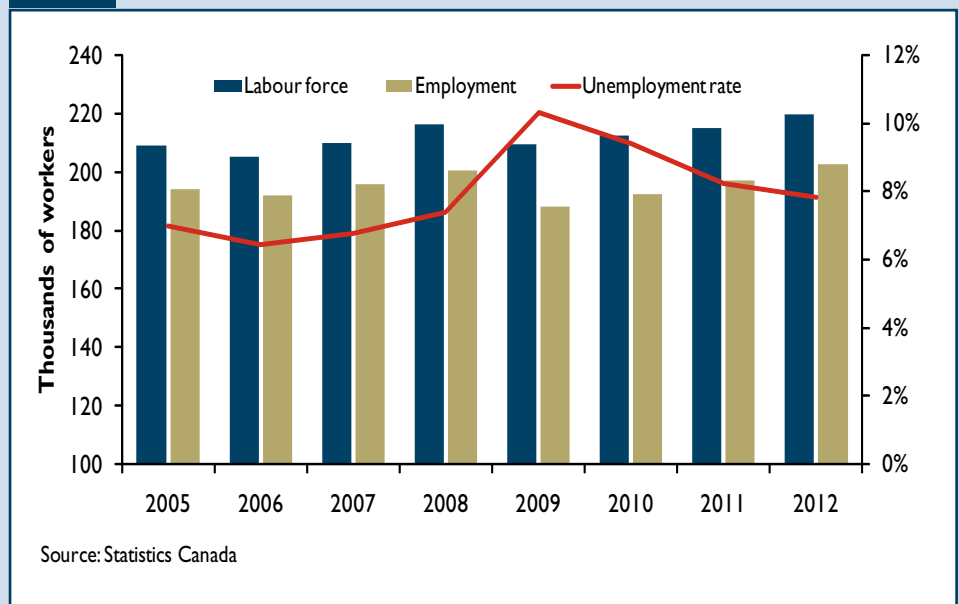

Employment in St. Catharines-Niagara

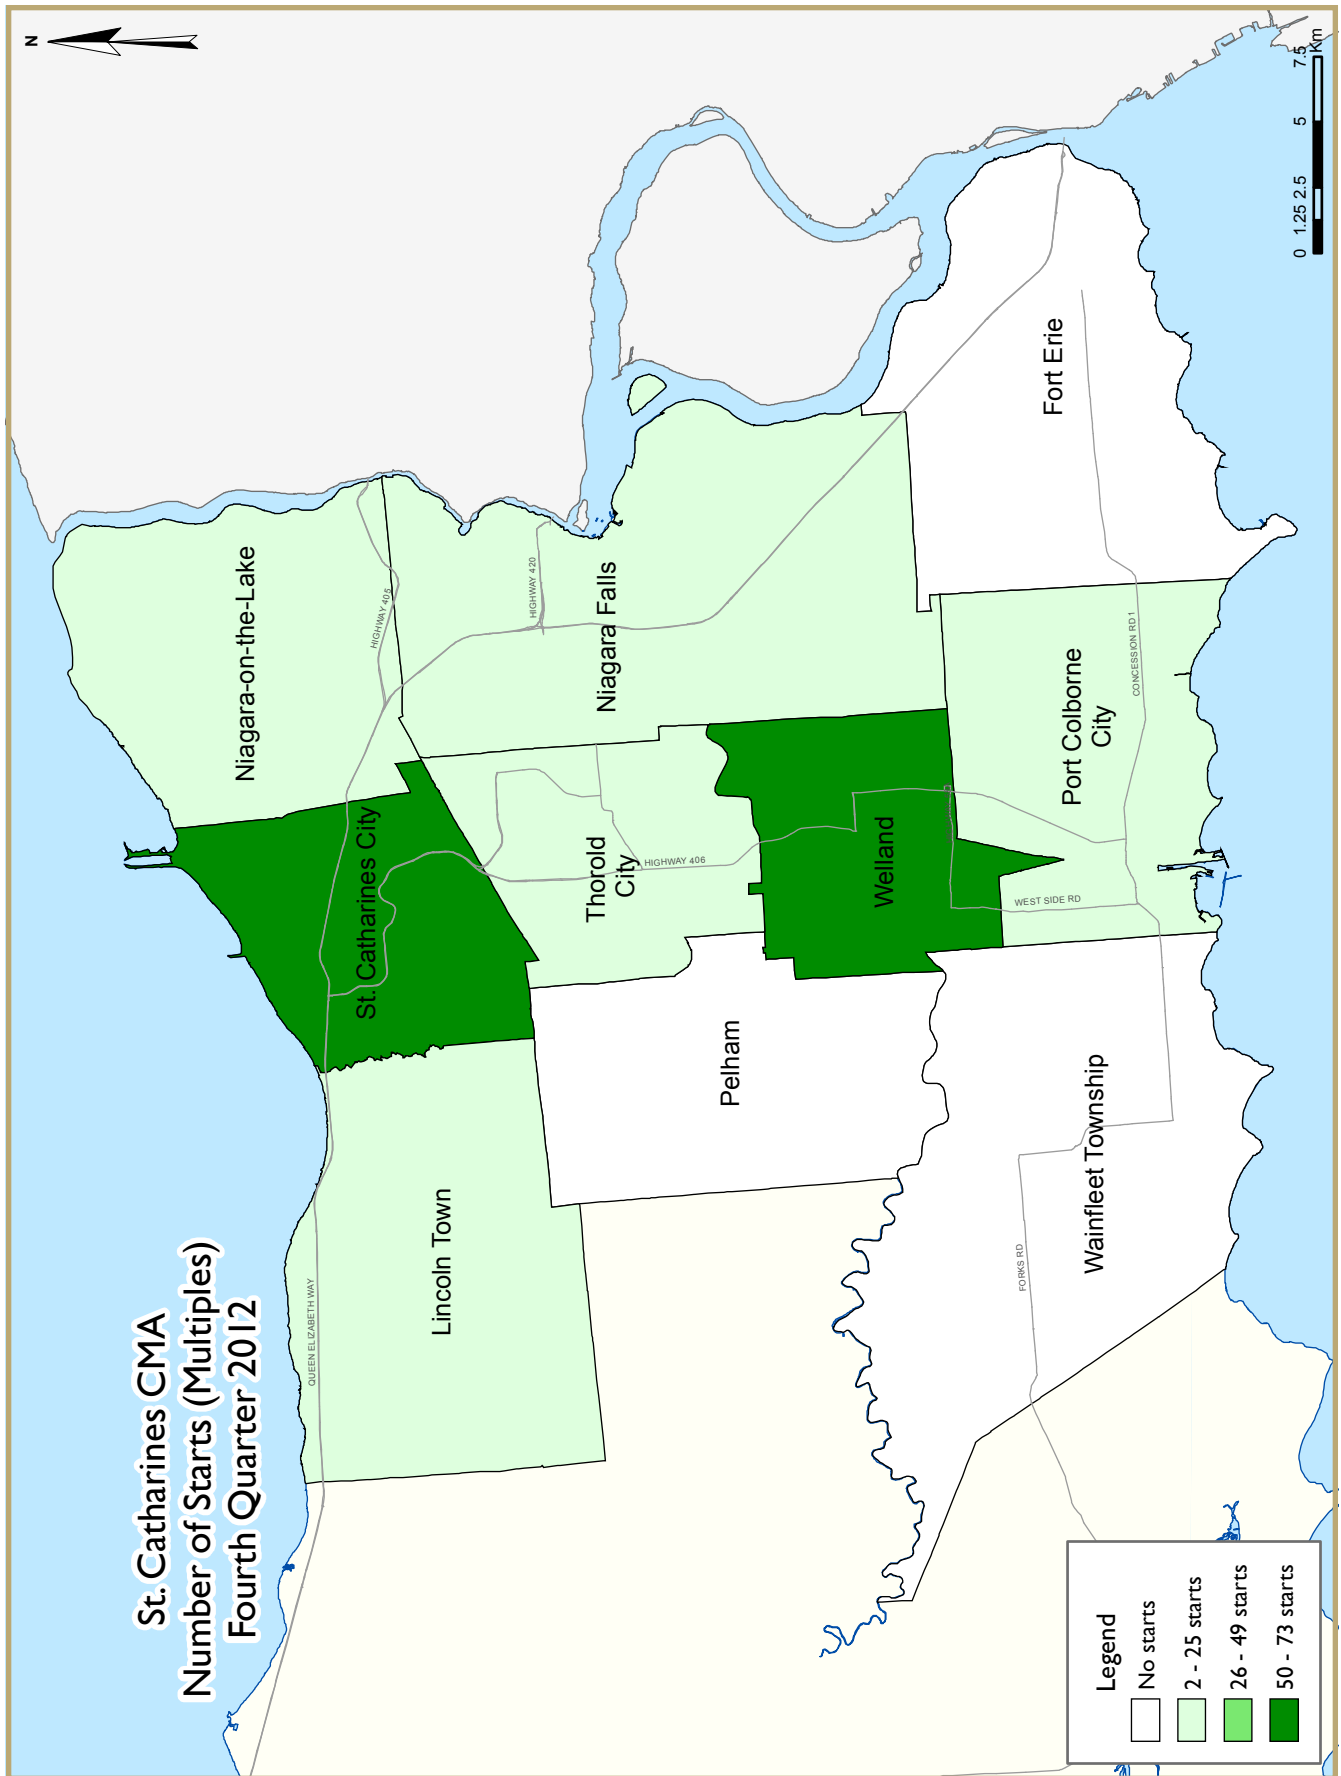

Employment growth was fairly strong in the St. Catharines Niagara CMA in 2012 at roughly 2.75 per cent. This is the third consecutive year of employment increases in the CMA, which have all been in the 2-3 per cent range. Both full-time and part-time employment increased significantly in 2012 and the bulk of employment growth came from the service producing sector.

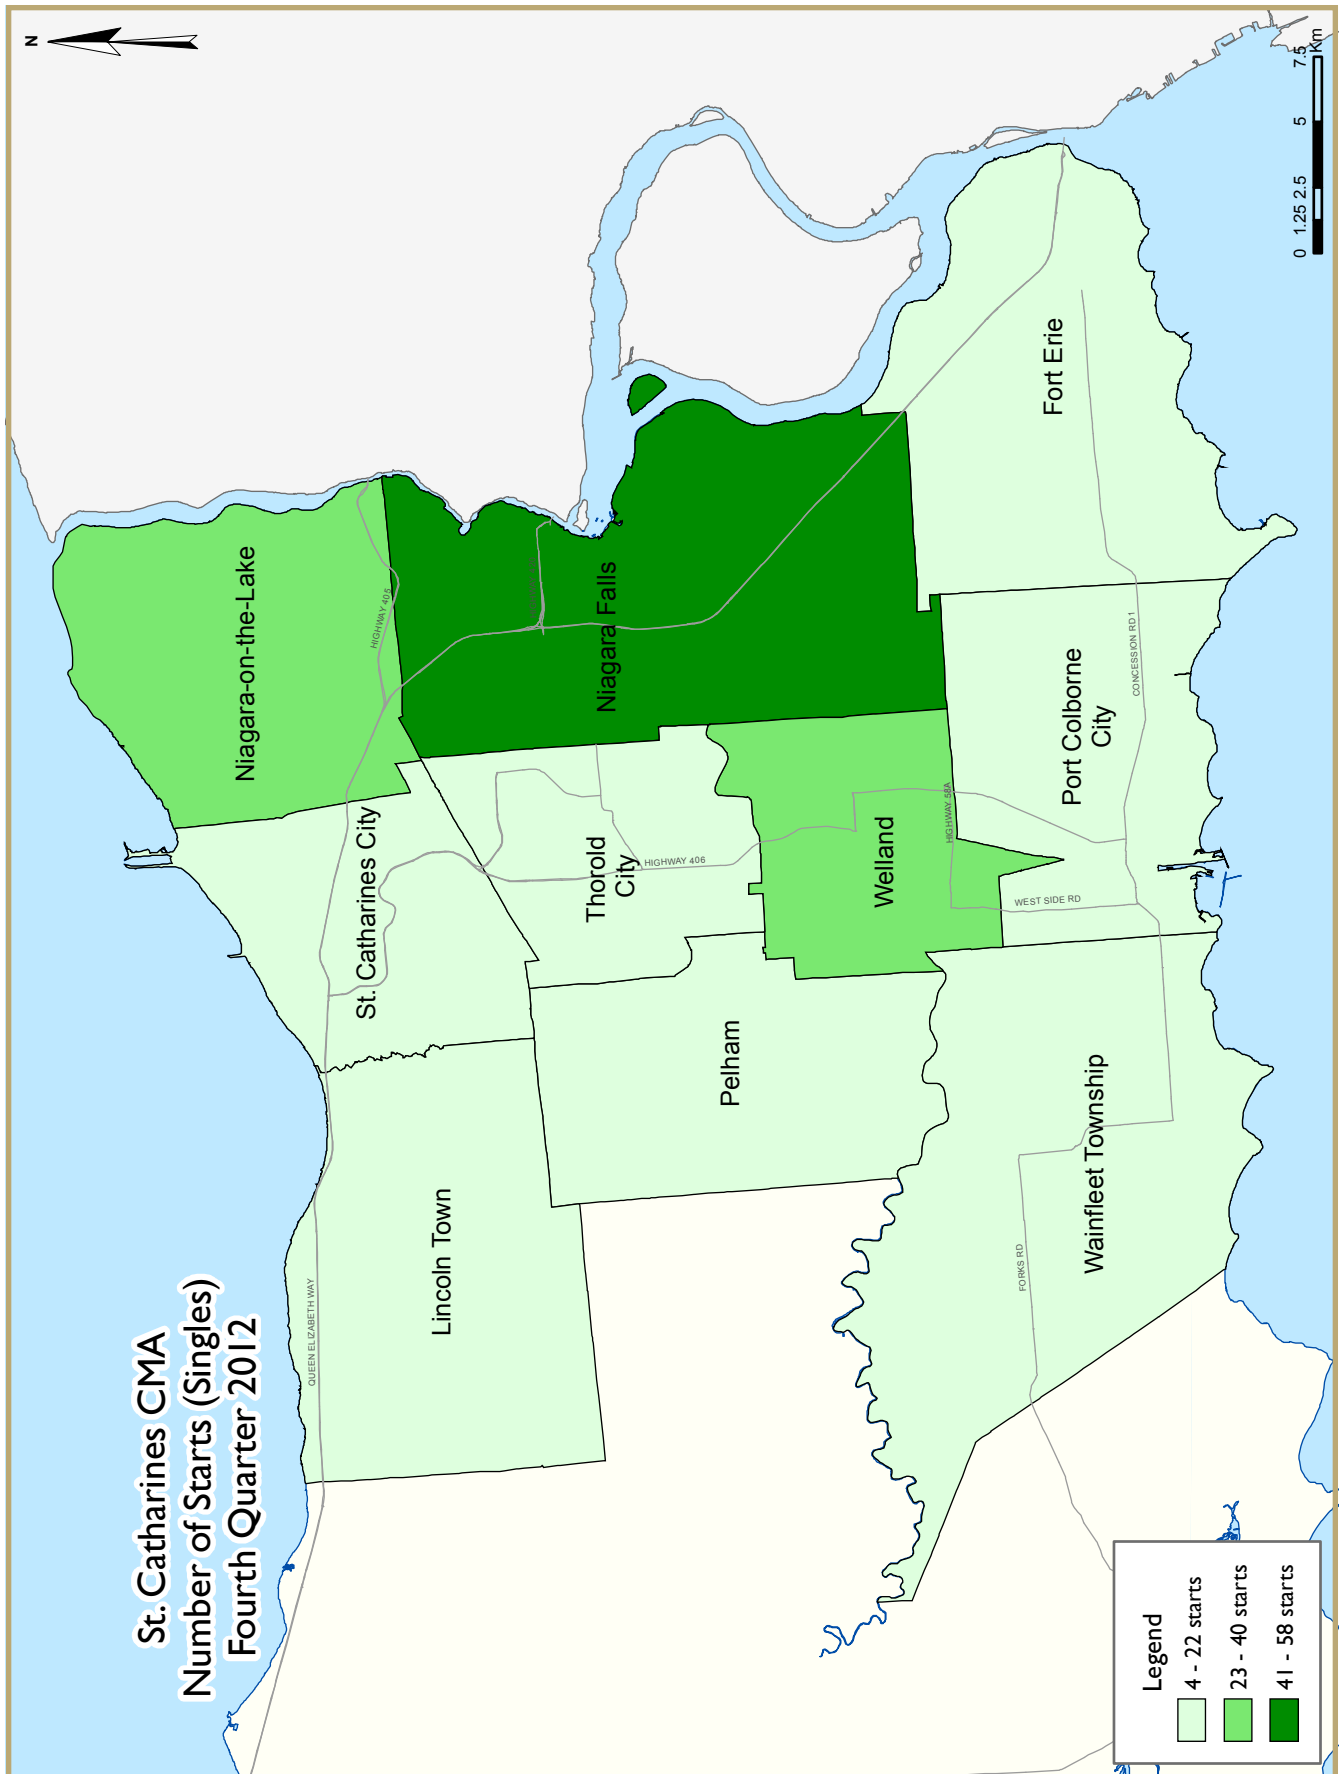

However, the unemployment rate only dropped slightly in 2012 because the labour force grew by almost as much as total employment. The labour force includes all people who are employed but also includes those people who are not employed but are actively searching for work. In 2012, the increase in the labour force was the largest since 2009, a year in which there were significant decreases in both employment and the labour force in the region. A significant increase in the labour force can indicate an increase in job seekers' confidence and their

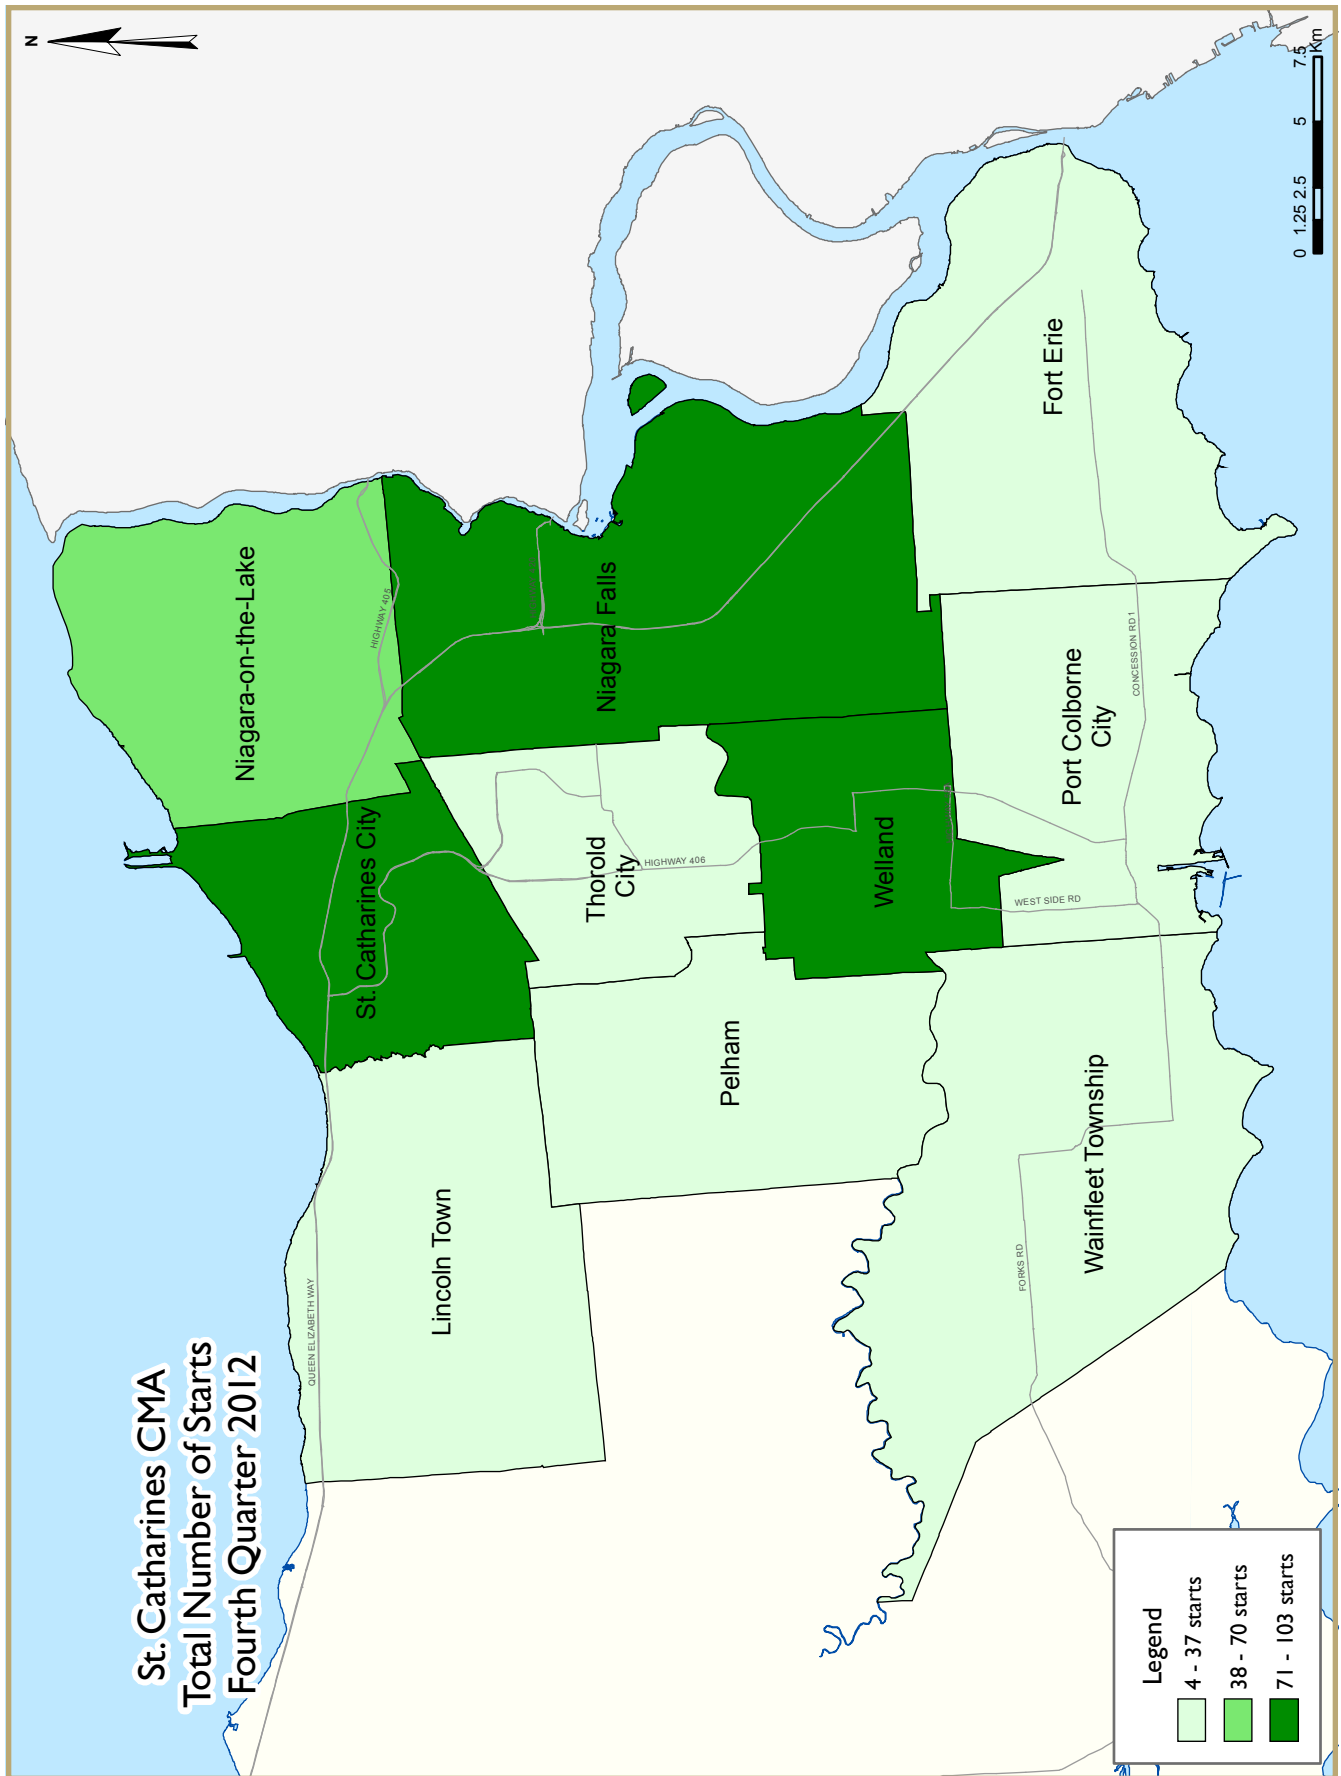

perceptions regarding finding employment. In 2009, total employment decreased by over six percent and full-time employment dropped by almost nine per cent. In 2012, total employment in the region is now higher than in 2008, the year before the drop. Total full-time employment is now just below what it was in 2008.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
