

HOUSING NOW

Greater Sudbury CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2013

New Home Market

2012 Sudbury total starts off ten per cent from 2011 peak

Total housing starts in 2012 reached five hundred and thirty six units in Sudbury, down ten per cent from 2011. Weaker-than-expected employment growth has been a key

factor limiting new single-detached construction to 294 units. The 147 total multi-family units started in the fourth quarter, which was more than triple the recent five-year-average for fourth quarters, provided a large boost to the annual starts tally.

Although construction of semi-detached, row and apartment units topped the 200 mark for the fourth consecutive year in Greater Sudbury

ending December at 242, they were down 12 per cent from a remarkable 2011. The appeal in higher density housing is linked with a moderately low vacancy rate and the relatively high cost of buying a single-detached home.

While fourth quarter multi-family starts were strong, the 71 single-detached starts that commenced in the fourth quarter were 11 per cent lower than last year and 30 per cent below the average for fourth quarters over the last five years. For the whole year, the bulk of the 294 Greater Sudbury single-detached starts were in Sudbury City (111) but 57 of them were started in Valley East and 56 in Rayside-Balfour. Nickel Centre and Walden saw 40 and 23 starts respectively.

Although employment in Greater Sudbury trended up in the fourth quarter, it was not enough to post year-over-year employment growth. A decline in commodity prices, especially nickel's, caused by challenges in the global economy, was probably the most poignant factor in causing Sudbury employment to fall 1.8 per cent year-over-year. Nonetheless, mining and the mining supply sector continue to generate jobs in the Greater Sudbury area.

Sault Ste. Marie, North Bay and Timmins all had better years than 2011 when it came to single-detached new construction and only the Sault fell slightly behind on total starts. Sault's new construction of multi-family units fell to nine units from 27 last year ensuring that total starts would not keep pace with 2011. Nevertheless, Sault Ste. Marie single-family homes rose 17 per cent to 111 units over 95 last year while North Bay and Timmins rose 15 and 100 per cent respectively.

For the second consecutive year, average prices for absorbed new single-detached units in each of Sudbury, Sault Ste. Marie, and North Bay were over \$350,000. Only in North Bay, the average absorbed price fell compared to one year ago. For the first time ever, most new single-family homes average price in Greater Sudbury topped \$400,000.

Resale Market

Sudbury resale market starts strong and finishes weaker in 2012

Sudbury buyers emerged from their winter dens hungry for real estate with first quarter sales reaching their highest mark during the year. Unfortunately, the pace was not maintained throughout the year. Marking the lowest level since 2009, sales closed the quarter down 8.2 from last year's fourth quarter. All totalled, sales were off 1.2 per cent for the year. Elsewhere in Northern Ontario, results mirrored Sudbury with the possible exception of North

Bay but even there, sales rose only 0.7 per cent. In all four markets, average prices did finish ahead of 2011.

New listings fell faster than sales in 2012 thus causing market conditions to tighten partially contributing to the surprisingly strong average price gains of 4.7 per cent. In keeping with the changes in supply and demand, the sales to new listings ratio rose in 2012, but not to the point where, taken with other indicators, would warrant a seller's classification. As it is, the market continues classified as balanced.

Given the increase in the sales-to-new-listings ratio, average price gains grew strongly in the first quarter, moving 8.6 per cent ahead. However, they proceeded to weaken to the point where average prices actually slipped in the fourth quarter by 0.2 per cent. The resale market that began with such a bang in the first four months of the year, slowed after that, especially after July 31st. Average prices did finish ahead in 2012 4.7 per cent, despite lagging second half of the year demand.

Figure 2

Sudbury average weekly earnings grew more strongly than the national and Ontario average in 2012, supporting demand especially early in the year. Sudbury wages grew 3.8 per cent

compared to 3.2 per cent for Canada and 2.2 per cent for Ontario. It is possible that demand for skilled workers in construction, mining and mining services are driving up average

weekly earnings more than averages in the more diverse province and country.

Sudbury Net Migration Improving But Still Negative

For the third consecutive year, migration numbers for Greater Sudbury were negative according to Statistics Canada. The 2010-11 numbers were pegged at 294 out-migrants, an improved mark in contrast to the rather bleak number in 2009-10 that approached 1,000. This recent outflow of migrants reflects the challenging global commodity situation and labour unrest in 2009-10. Nickel prices closed the year 23 per cent behind 2011 levels while copper fell a modest two per cent. Improved commodity prices, especially for those base metals so critical to Sudbury, are integral to employment improvement, positive migration and increased housing demand.

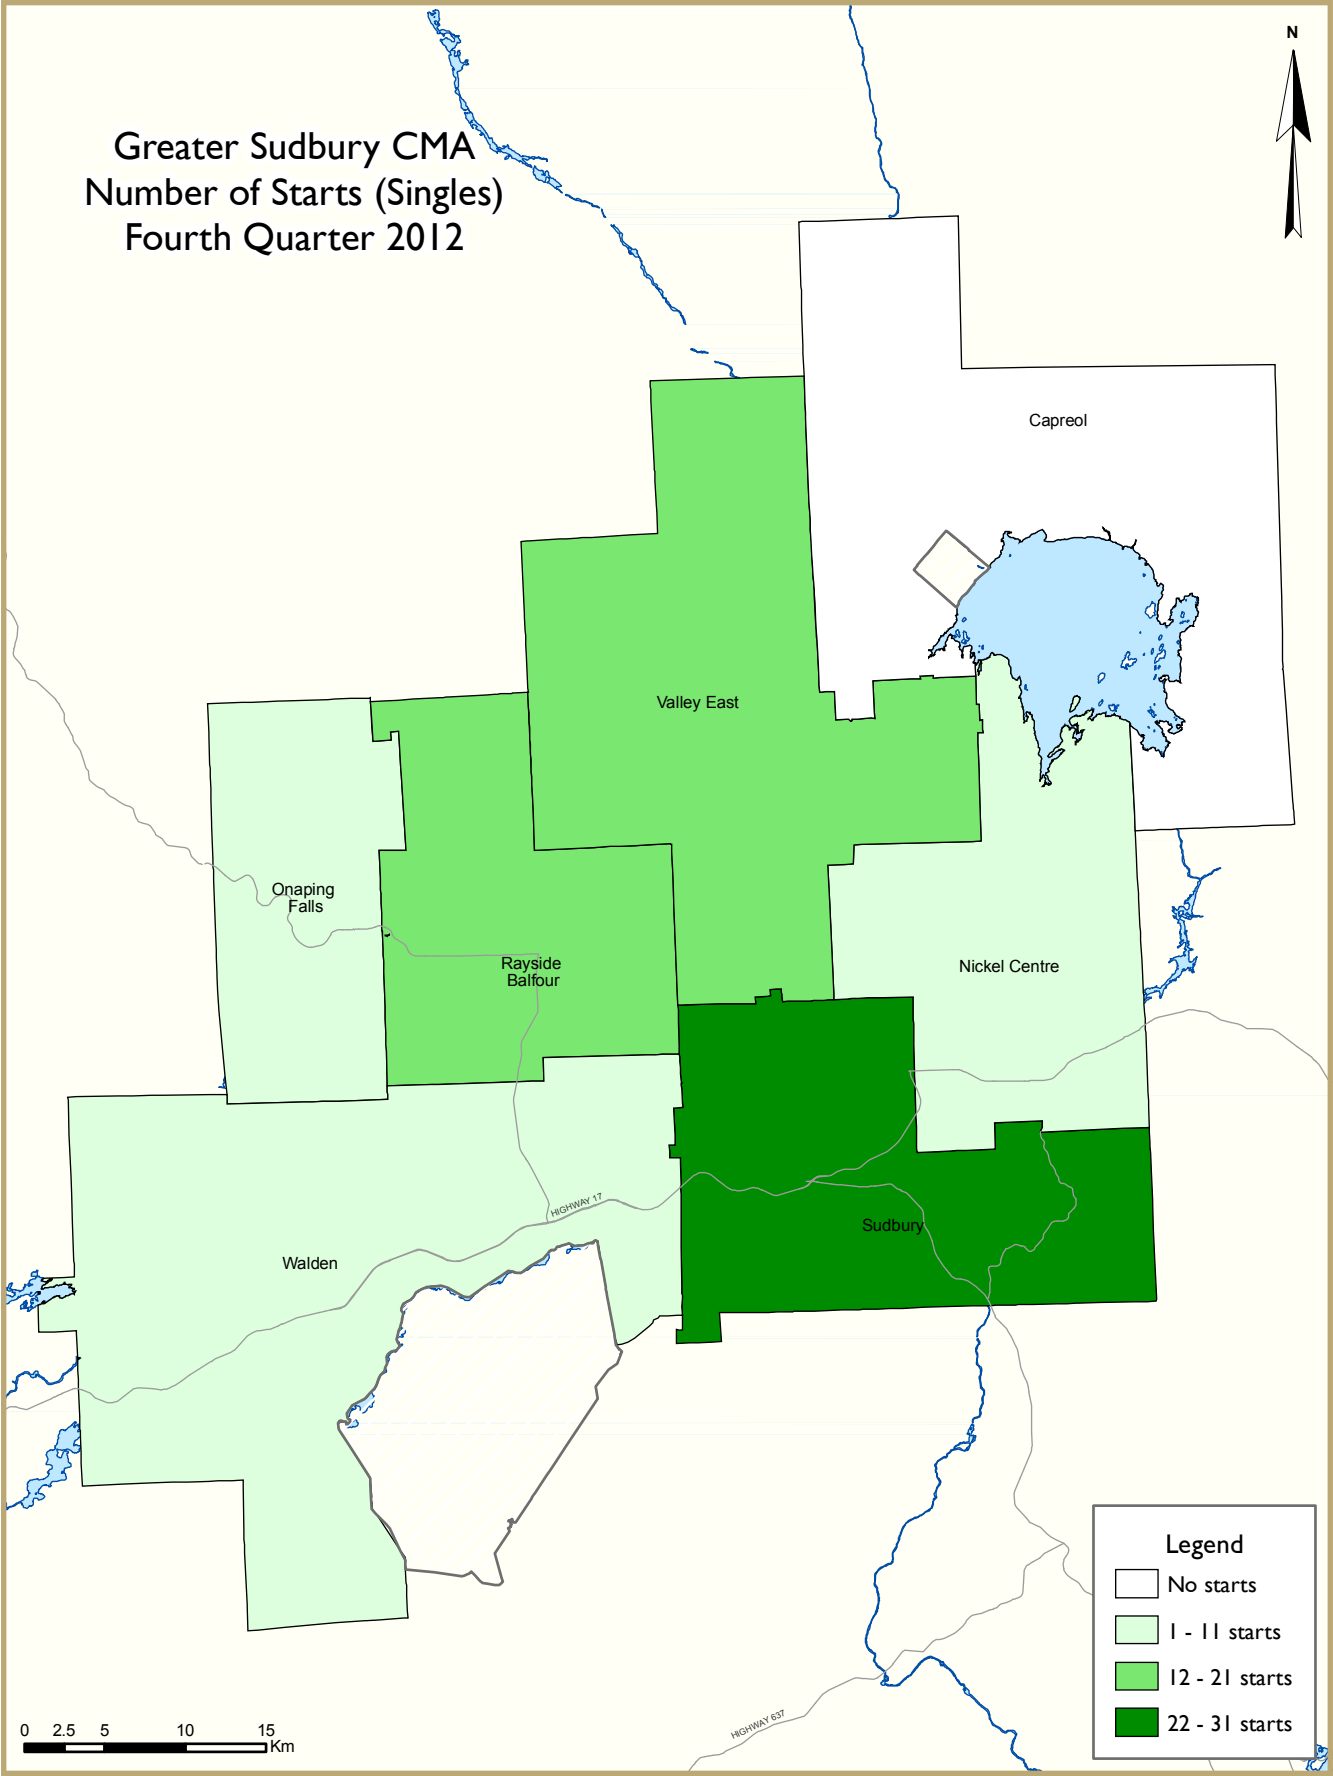

Despite weaker employment numbers in 2012, Sudbury's labour force fell at the same pace as employment in 2012. This caused unemployment rate to remain virtually unchanged, rising to 6.9 per cent from 6.8 per cent in 2011. Given that the

Ontario unemployment is almost one point higher than Sudbury's and that Northern Ontario is expected to fare better than the rest of the province, the trend towards improving net migration might continue in the coming years.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
