New Home Market

New construction turns the corner

Total new construction in the Greater Toronto Area (GTA) has begun turning the corner, coming in somewhat higher in the second quarter of this year from the first after decreasing since the fall of 2012. After seasonal adjustment, GTA starts

in the second quarter of 2013 were tracking at a rate similar to household formation. Before seasonal adjustment, starts were down about a third from a year ago.

At the sub-market level, the pattern was similar. Starts in all regions were down substantially from a year ago, while picking up from the first quarter in all regions but Halton. This quarter new construction in Peel and York

Regions made up over 40 per cent of the total GTA starts after having been close to a third for most of the past year. The strength in these regions reflects the shift to low-rise starts during the quarter.

Starts of all low-rise dwelling types were up in the second quarter. Although singles continued to account for the majority of low-rise starts, the pick-up in semi-detached and row home starts was much more robust. Almost all apartment starts are condominiums and this category declined slightly from the previous quarter. However, the total number of apartment starts increased slightly from the previous quarter as some new rental units got underway. The number of condominium apartments sold during the strong sales period in 2011 which have not yet been started is gradually diminishing but still remains high. However, because the pace of sales of new condominium apartments has slowed, the period from project launch to start of construction has lengthened. This was a factor limiting the number of condominium apartment starts during the second quarter.

The other factor limiting condominium apartment starts is the relatively high number currently under construction. During the second quarter, condominium apartment completions reached a near record 5,961 units, allowing the number under construction to fall. However, the large number of units currently in the construction phase continues to tie up resources in the GTA, limiting the potential number of starts.

Resale Market

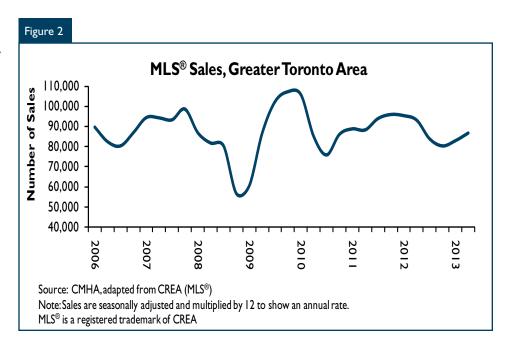

Sales recovery progresses

After seasonal adjustment, MLS® sales moved up another notch in the second quarter. The gains came mainly in the higher price ranges, with of sales of homes priced under \$400k falling to 40 per cent of total sales by June from about 47 per cent in January. Although mid-priced homes gained in popularity, the strongest increase in share in total sales occurred among homes priced \$800 thousand or more. This share jumped from nine per cent to 13 per cent between January and May, before falling back to 12.1 per cent in June. The shift to higher-priced homes implies that the relatively small number of first-time buyers compared to repeat buyers continued into the second quarter. Although employment among 25-44 year-olds increased significantly, recovery from the drop in 2008 remained incomplete which limited willingness to make the commitment to homeownership.

With repeat buyers remaining the dominant group in the market, new

listings moved up along with sales. After having declined in late 2012, the average price began increasing in the first quarter, giving homeowners some incentive to list. With both sales and listings moving up at a similar pace, market conditions remained balanced, with the overall sales to new listings ratio in the second quarter remaining virtually unchanged from 54 per cent in the first quarter. A few areas, particularly Ajax Pickering, remained tighter than the overall market.

Sales of single-detached homes were particularly strong in the second quarter, rising more than 10 per cent from the previous quarter in the GTA following seasonal adjustment. However, growth in average price slowed to just under one per cent following relatively strong growth in the first quarter. Condominium apartment sales also picked up in the second quarter, as did average price growth for this dwelling type. Despite a small increase in seasonally adjusted listings from the previous quarter, the market tightened a little but remained well within balance market territory.

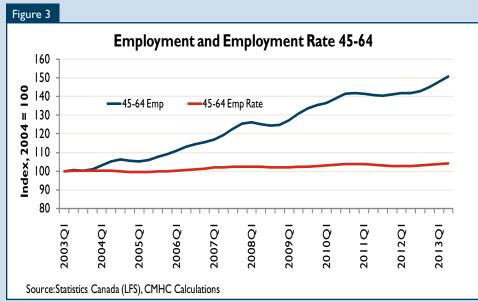

Employment, the employment rate and home buying

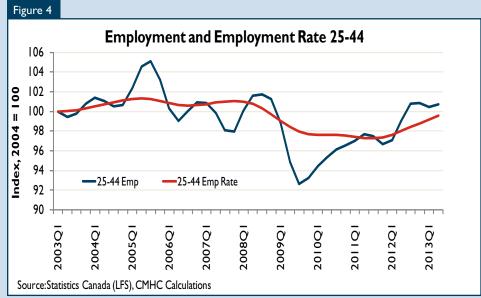

Recently, most demand for homes has come from repeat buyers. Looking at employment for the 45-64 age group, we can see why. Employment for this group has grown steadily over the past decade with only a pause for the 2008 recession.

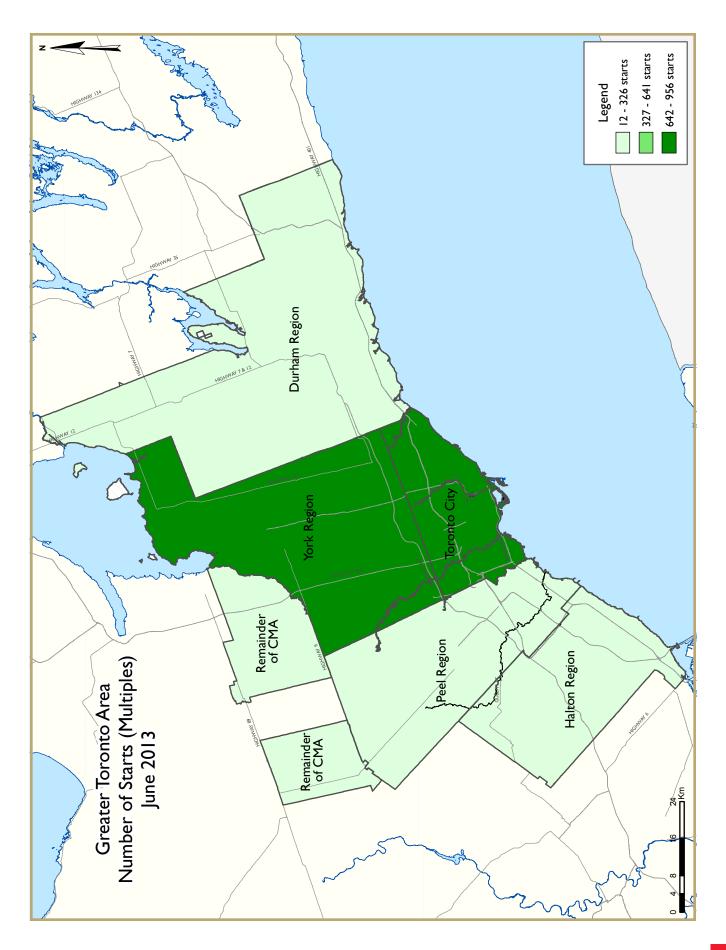

This growth does not mean that more people in this age group were getting jobs. The employment rate is the proportion of the population which is employed. For this age group, it remained relatively constant throughout this period. Baby boomers steadily turned 45 throughout this period and, even though most stayed in the same job, they increased both employment and population in the 45-64 year old age group on their birthday. Typically, individuals' incomes are highest when they reach this age and the data show their employment was secure. It also appears they have been willing to spend some of their higher incomes on housing.

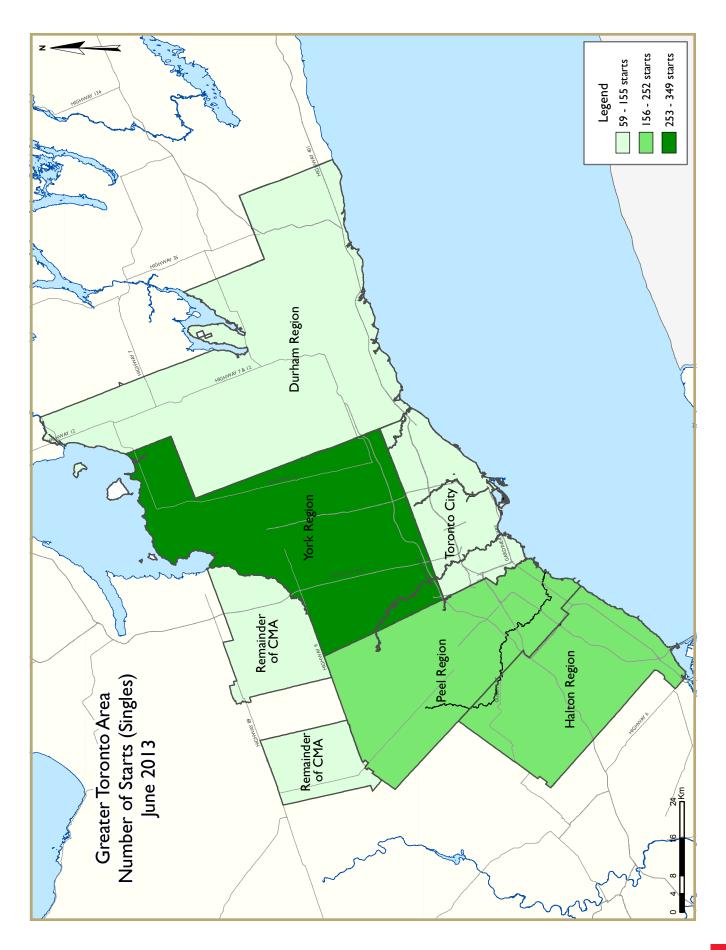

The experience of the 25 to 44 year-old age was quite different. Employment has been up and down, and the group was particularly hard hit by the recession. Although employment has recovered to its 2008 level, the employment rate shows that

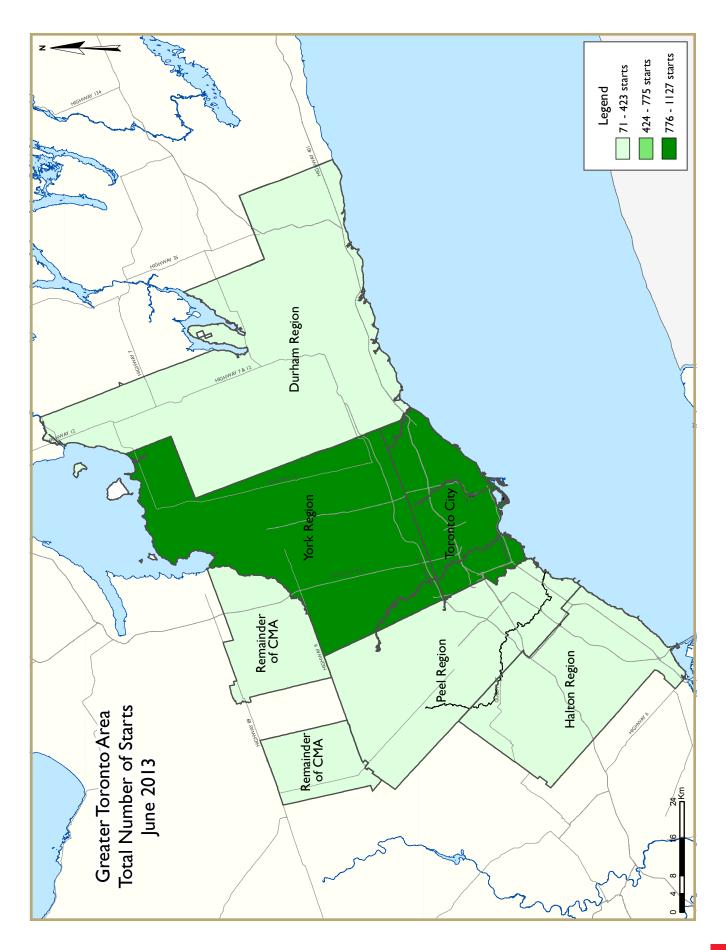

this doesn't tell the whole story. If the rate was back to its pre-recession level, employment would have grown. Typically, first-time buyers are drawn from this age group and their employment experience is making some hesitate about becoming homeowners.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
