Date Released: April 2013

New Home Market

Edmonton Housing Starts Up in March 2013

Housing starts in the Edmonton Census Metropolitan Area (CMA) continued to trend up in the third month of 2013. There were a total of 1,176 units started in March 2013, up from 1,030 starts in March 2012. Within the City of Edmonton, total

housing starts decreased in March to 732 units from 773 units in 2012. During the first quarter of 2013, total starts in the Edmonton CMA increased by 29 per cent from the 2012 level, reaching 2,849 units.

Single-detached starts in the Edmonton CMA increased by nine per cent year-over-year in March, totalling 426 units. Starts inside Edmonton City limits rose by 24 per cent from March

2012, totalling 296 units. On a year-to-date basis, single-detached starts increased by four per cent in the Edmonton CMA, reaching 1,125 units.

There were 361 single-detached units completed in March 2013, a seven per cent decrease from the 389 units finished in March 2012. The number of single-detached units under construction was at 3,684 in the third month of 2013, up 13 per cent from a year earlier. The inventory of complete and unabsorbed single-detached homes was up as a result of slower absorption. The inventory of single-detached homes was 646 units in March 2013, up from 618 units in the same month a year earlier while the number of absorbed single-detached units was 343 down 18 per cent from the corresponding month in 2012.

The average absorbed price of single-detached units in March relatively remained stable, up by less than one per cent year-over-year to \$506,186. The median price of absorbed single-detached homes, on the other hand, rose two per cent to \$459,350. By comparison, data from Statistics Canada's New House Price Index

(NHPI) in February 2013 remained relatively stable as well. Contractor selling prices reported in the index increased by less than one per cent from the previous year. Within the city of Edmonton, the average absorbed price for a single-detached home was \$502,453 in March 2013, nearly identical to the \$502,630 average recorded in the same month in 2012.

Multi-family starts in the Edmonton CMA, which consist of semi-detached units, rows, and apartments, totalled 750 units in March compared to 639 units started in March 2012. The majority occurred within the City of Edmonton. Increases were seen across all segments in the multi-family category. Apartment starts totalled 484 units in March compared to 399 starts in March 2012, while semi-detached starts increased to 184 units compared to 174 starts recorded in the same month in 2012. Meanwhile, row housing starts increased to 82 units in March from 66 units recorded in 2012. During the first three months of 2013, multi-family starts in the Edmonton CMA increased by 53 per cent from the levels in 2012, totalling 1,724 units.

Due to a rise in multi-family starts in 2012, completions of multi-family units continued to increase on a year-over-year basis in March 2013. There were 572 completed units in the Edmonton CMA, up from the 415 units recorded in the same month in 2012. The number of multi-family units under construction moved up as well. A total

Figure 3

Source: CMHC

of 8,183 multi-family units were under construction in March, up from the 5,800 units in 2012. The inventory of ownership multi-family units, on the other hand, decreased by seven per cent from the year prior.

Resale Market

Residential sales on the rise

The pace of residential MLS® sales in Edmonton picked up in the first quarter of 2013, supported by positive employment conditions, net migration, and higher incomes. A total of 4,021 sales were completed in the first quarter of this year, six per cent higher than the 3,783 sales reported in the first three months of 2012. Each month in the first quarter of 2013 reported higher sales than the previous year, with January reporting the strongest gain of 16 per cent.

The number of new MLS® listings year-over-year decreased during the first quarter of 2012 in the Edmonton Region. There were 7,295 new listings posted in the first three months of 2013, compared to 8,311 new listings in the same quarter of last year. Active listings averaged 5,502 units from January to March of 2013, down from 6,203 active listings posted in the first three months of 2012. With sales increasing and active listings declining, the sales-to-active listings ratio in March 2013 moved up to 23 per cent from 22 per cent a year earlier.

Figure 4

Source: CREA

With market conditions becoming more competitive, average sale prices in the first quarter of 2013 rose. The average MLS® residential price was \$338,157 from January to March 2013, up 2.7 per cent from the average selling price of \$329,382 in the first three months of 2012.

Economy

Job Growth Moderates

Seasonally adjusted employment in the first quarter of 2013 averaged 703,000, down from the 705,000 jobs held within the Edmonton CMA in the final quarter of 2012. This represents a net reduction of 2,000 positions. However, on a year-over-year basis, employment remained

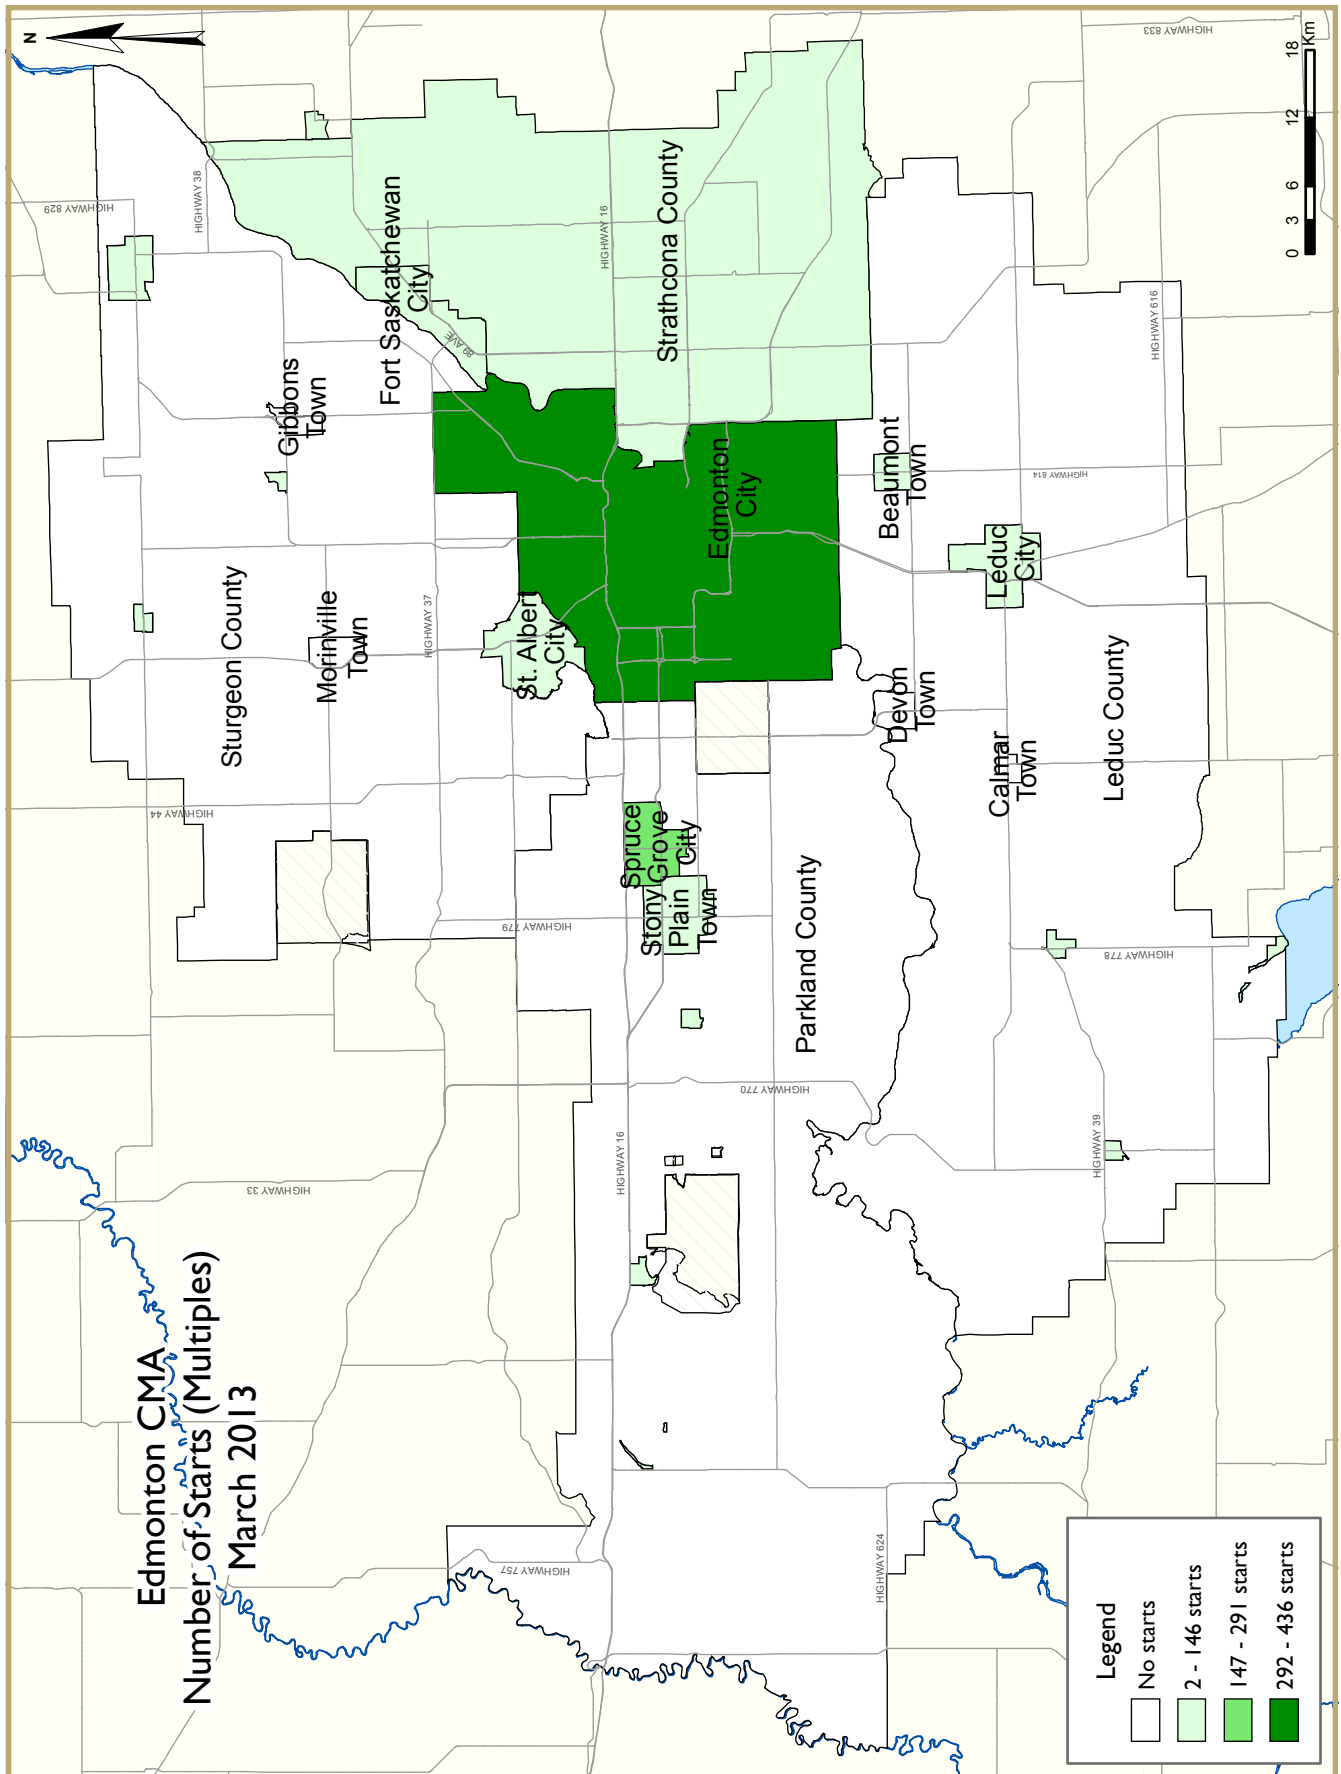

higher in the first quarter of 2013 than in the same quarter a year earlier. With the continued demand for labour, Edmonton's labour market outperformed many other areas in Canada. The unemployment rate on a seasonally adjusted basis averaged 4.2 per cent in the first quarter of 2013, down from 4.5 per cent in the final quarter of 2012. The low unemployment rate also contributed to higher wages. Statistics Canada data indicates that Average Weekly Earnings in the Edmonton CMA moved up seven per cent in the first quarter of 2013 from the corresponding period in 2012.

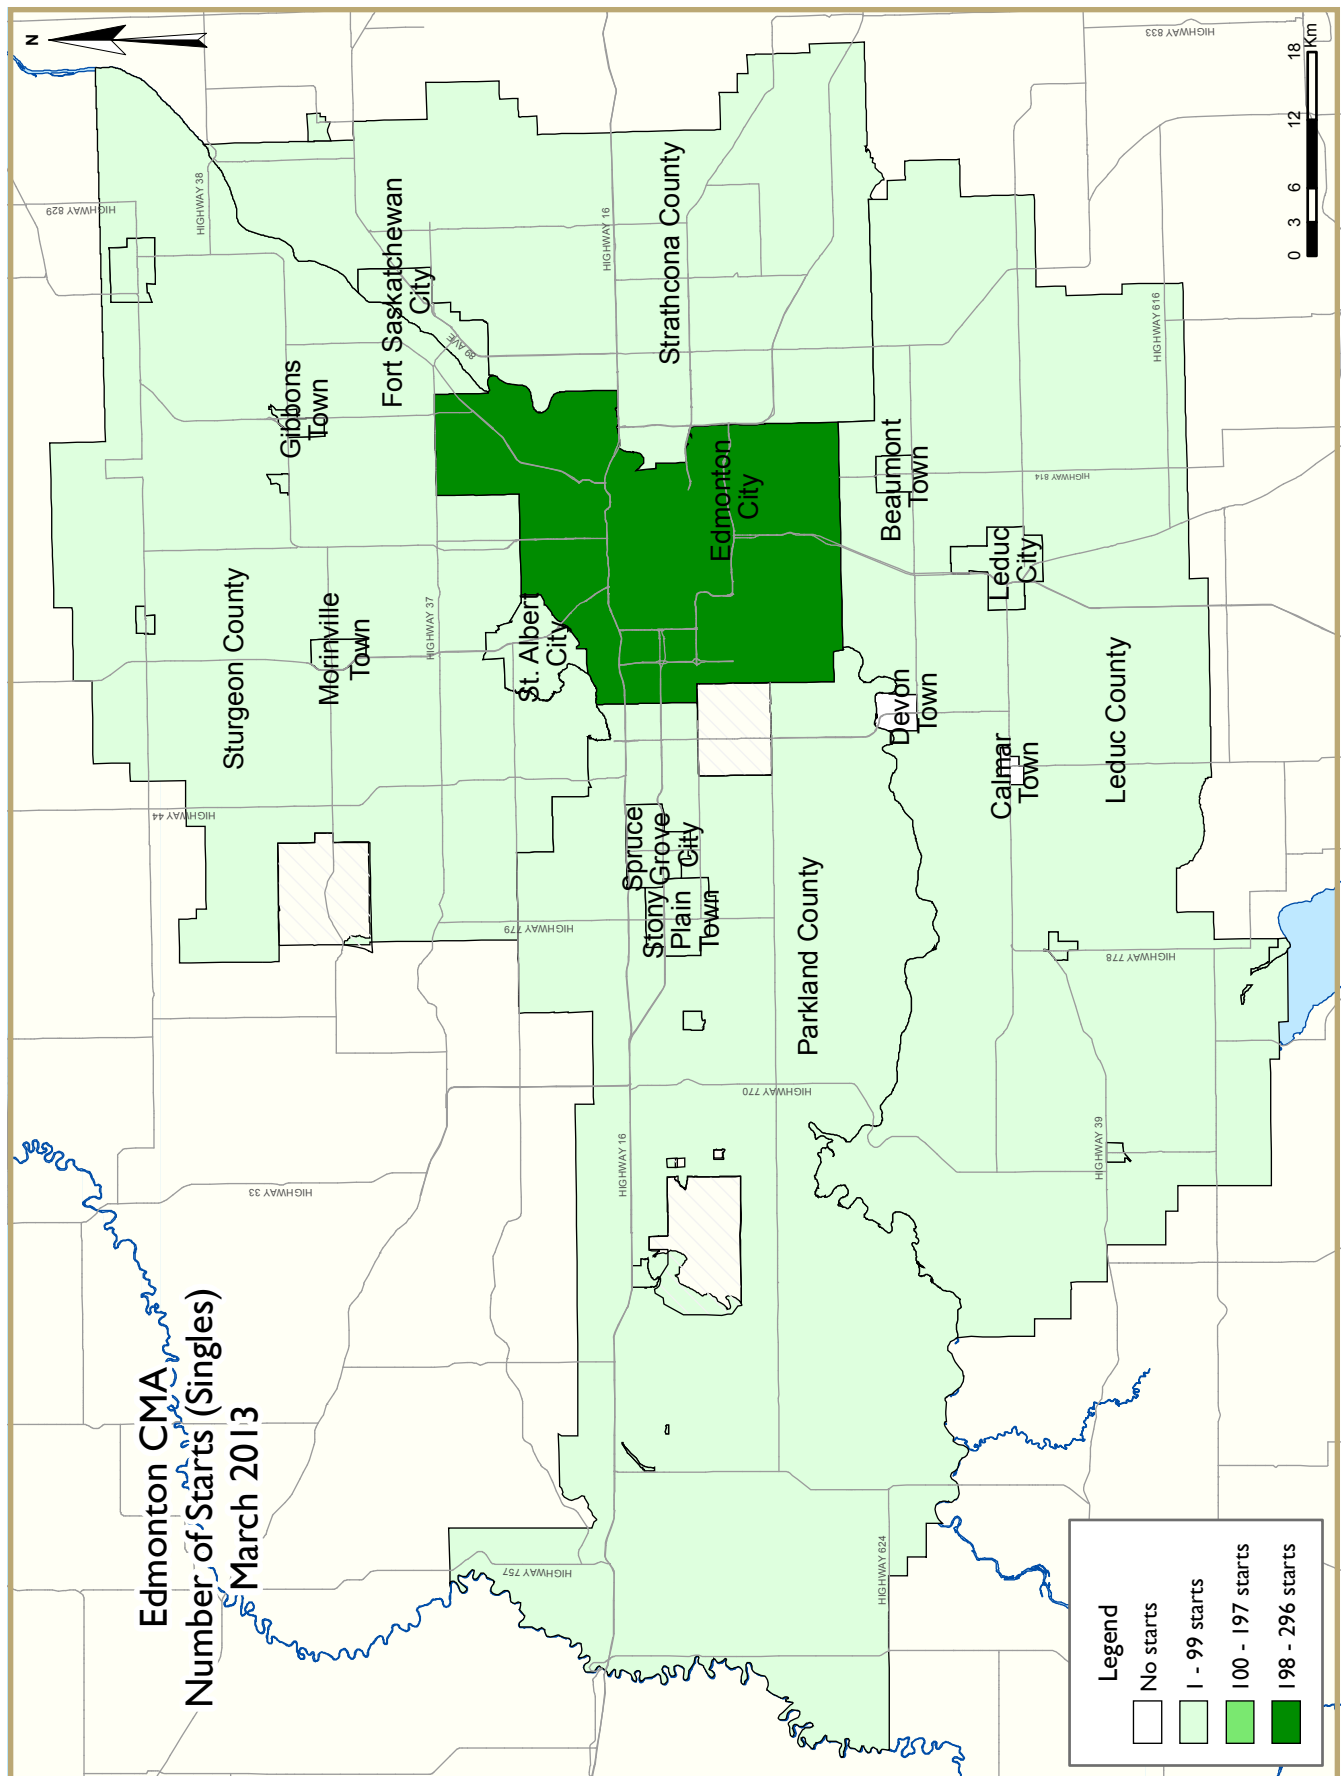

Migration to Alberta in the fourth quarter of 2012 was strong, much like the first three quarters of that year. Alberta's economy and labour market offered employment opportunities that were more favourable compared to many other places, attracting people from other provinces and countries. Net migration in the fourth quarter rose 62 per cent from 11,022 migrants in 2011 to 17,829 in 2012. Impressive gains were experienced among interprovincial, international, and non-permanent residents. From within Canada, Alberta gained the most net migrants from Ontario followed by British Columbia. For 2012, net migration reached 85,978 people, more than doubling the 2011 tally as well as reaching a record high.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca or follow us on [Twitter](#), [YouTube](#) and [Flickr](#).

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! On June 1, 2012, CMHC's Market Analysis Centre turned 25!

CMHC's Market Analysis Centre has a strong history as the Canadian housing industry's "go-to" resource for the most reliable, impartial and up-to-date housing market data analysis and forecasts, in the country.

CMHC's Market Analysis Centre e-reports provide a wealth of detailed local, provincial, regional and national market information.

- **Forecasts and Analysis –** Future-oriented information about local, regional and national housing trends.
- **Statistics and Data –** Information on current housing market activities – starts, rents, vacancy rates and much more.

Canadian Housing Observer 2012 – 10th Edition **Highlighting the State of Canada's Housing**

- A complete picture of housing trends and issues in Canada today
- Timely, comprehensive and reliable information and analysis
- Interactive local data tables for over 160 selected municipalities across Canada
