

# HOUSING NOW

## Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2013

## Home Market

### Edmonton housing starts rising

Residential construction rose in June 2013. Total housing starts in the Edmonton Census Metropolitan Area (CMA) increased 67 per cent year-over-year to 1,750 units in June. A triple-digit per cent gain in the multi-

family segment led the way. The 7,966 homes that broke ground in the CMA during the first half of the year were 46 per cent higher than in 2012.

In the Edmonton CMA, single-detached starts rose 13 per cent year-over-year to 589 units in June. Within Edmonton City limits, 392 single-detached homes were started in June, up 51 per cent from a year prior. Through June, 2,800 single-detached

Source: CMHC

homes were started in the CMA, 7.9 per cent more compared to the same period in 2012.

Completions of single-detached homes were up in June. The 445 single-detached units completed in June were 4.5 per cent ahead of June 2012. Higher levels of completions served to raise absorptions. Single-detached absorptions totalled 493 units in June, up 18.5 per cent year-over-year. For the first six months, on average, monthly completions rose by 4.3 per cent year-over-year, compared with a 2.8 per cent gain in monthly absorptions. The faster growth in completions compared to absorptions pushed inventories up. In June 2013, 575 completed single-detached homes were unabsorbed compared with 546 a year prior. A five per cent growth in inventories, mixed with a 13 per cent gain in homes underway raised single-detached supply to 4,521 units, 12.4 per cent higher year-over-year.

The average price of absorbed single-detached units declined 1.4 per cent year-over-year in June to \$524,513. The decline was due to fewer higher-priced homes being

absorbed. Homes priced at or above \$550,000 accounted for 21.6 per cent of single-detached absorptions in June, compared to 28.7 per cent a year prior. Similarly, at \$459,913 in June, the median price of absorbed single-detached homes was down 0.8 per cent from June 2012. By contrast, Statistics Canada's New House Price Index (NHPI) for Edmonton increased

by 0.2 per cent in June 2013 relative to June 2012.

Multi-family starts, which consist of semi-detached units, rows, and apartments, more than doubled year-over-year in June to 1,161 units. Gains were reported in all unit types, with apartment starts leading the sector. In June, 861 apartments were started, compared to 257 in June 2012. The City of Edmonton accounted for 73 per cent of multi-family starts in June, with 850 units recorded. Year-to-date, 5,166 multi-family units were started across the CMA, up 80 per cent from the first six months of 2012.

Completions of multi-family units totalled 603 in June, up from 579 a year earlier. At 447 units in June, multi-family absorptions were 6.2 per cent higher year-over-year. The higher number of absorptions helped reduce the inventory of multi-family units by 20 per cent year-over-year to 719 units in June 2013. However, the higher level of multi-family starts has increased supply 44.4 per cent to 10,632 units.

## Resale Market

### Residential sales continue to rise

Residential MLS® sales in Edmonton increased in the second quarter of 2013. A total of 6,041 sales were completed in the second quarter of this year, 1.6 per cent higher than the 5,943 sales reported in the second quarter of 2012. The increase in sales was driven by a stronger labour market which attracted more migrants to the area.

The number of new MLS® listings in the Edmonton Region decreased year-over-year during the second quarter of 2013. There were 10,098 new listings posted from April to June of 2013, compared to 10,236 new listings in the same quarter of last year. Active listings averaged 7,267 units in the second quarter of 2013, down from 8,024 active listings posted in the same quarter of 2012. The quarterly average sales-to-active listings ratio in the second quarter of 2013 was 23 per cent, unchanged from the previous year.

With higher levels of sales and declining listings, the average sale price in the second quarter of 2013 rose. The average MLS® residential price was \$351,179 from April to June 2013, up 2.8 per cent from the average price of \$341,669 in the second quarter of 2012. To the end of June, the average price increased 2.7 per cent from \$336,890 in 2012 to \$345,976 in 2013.

## Economy

### Strong labour market attracting migrants to the province

Employment levels in Edmonton continued to rise in 2013. Seasonally adjusted employment in the second quarter of 2013 averaged 710,900, up from the 703,100 jobs held within the Edmonton CMA in the first quarter of 2013. On a year-over-year basis, actual employment also remained higher in the second quarter of 2013 than in the same quarter a year earlier, up 2.6 per cent. The largest gains in employment on an unadjusted basis were witnessed in the services-producing sector contributing 21,800 new jobs from the second quarter last year.

High demand for labour kept the unemployment rate below five per cent and has put upward pressure on earnings. The unemployment rate on a seasonally adjusted basis averaged 4.6 per cent in the second quarter of 2013, slightly up from 4.2 per cent in the previous quarter. Average weekly earnings in the Edmonton CMA were up 8.6 per cent in the second quarter of 2013 from the corresponding period in 2012, reaching \$1,046 per week.

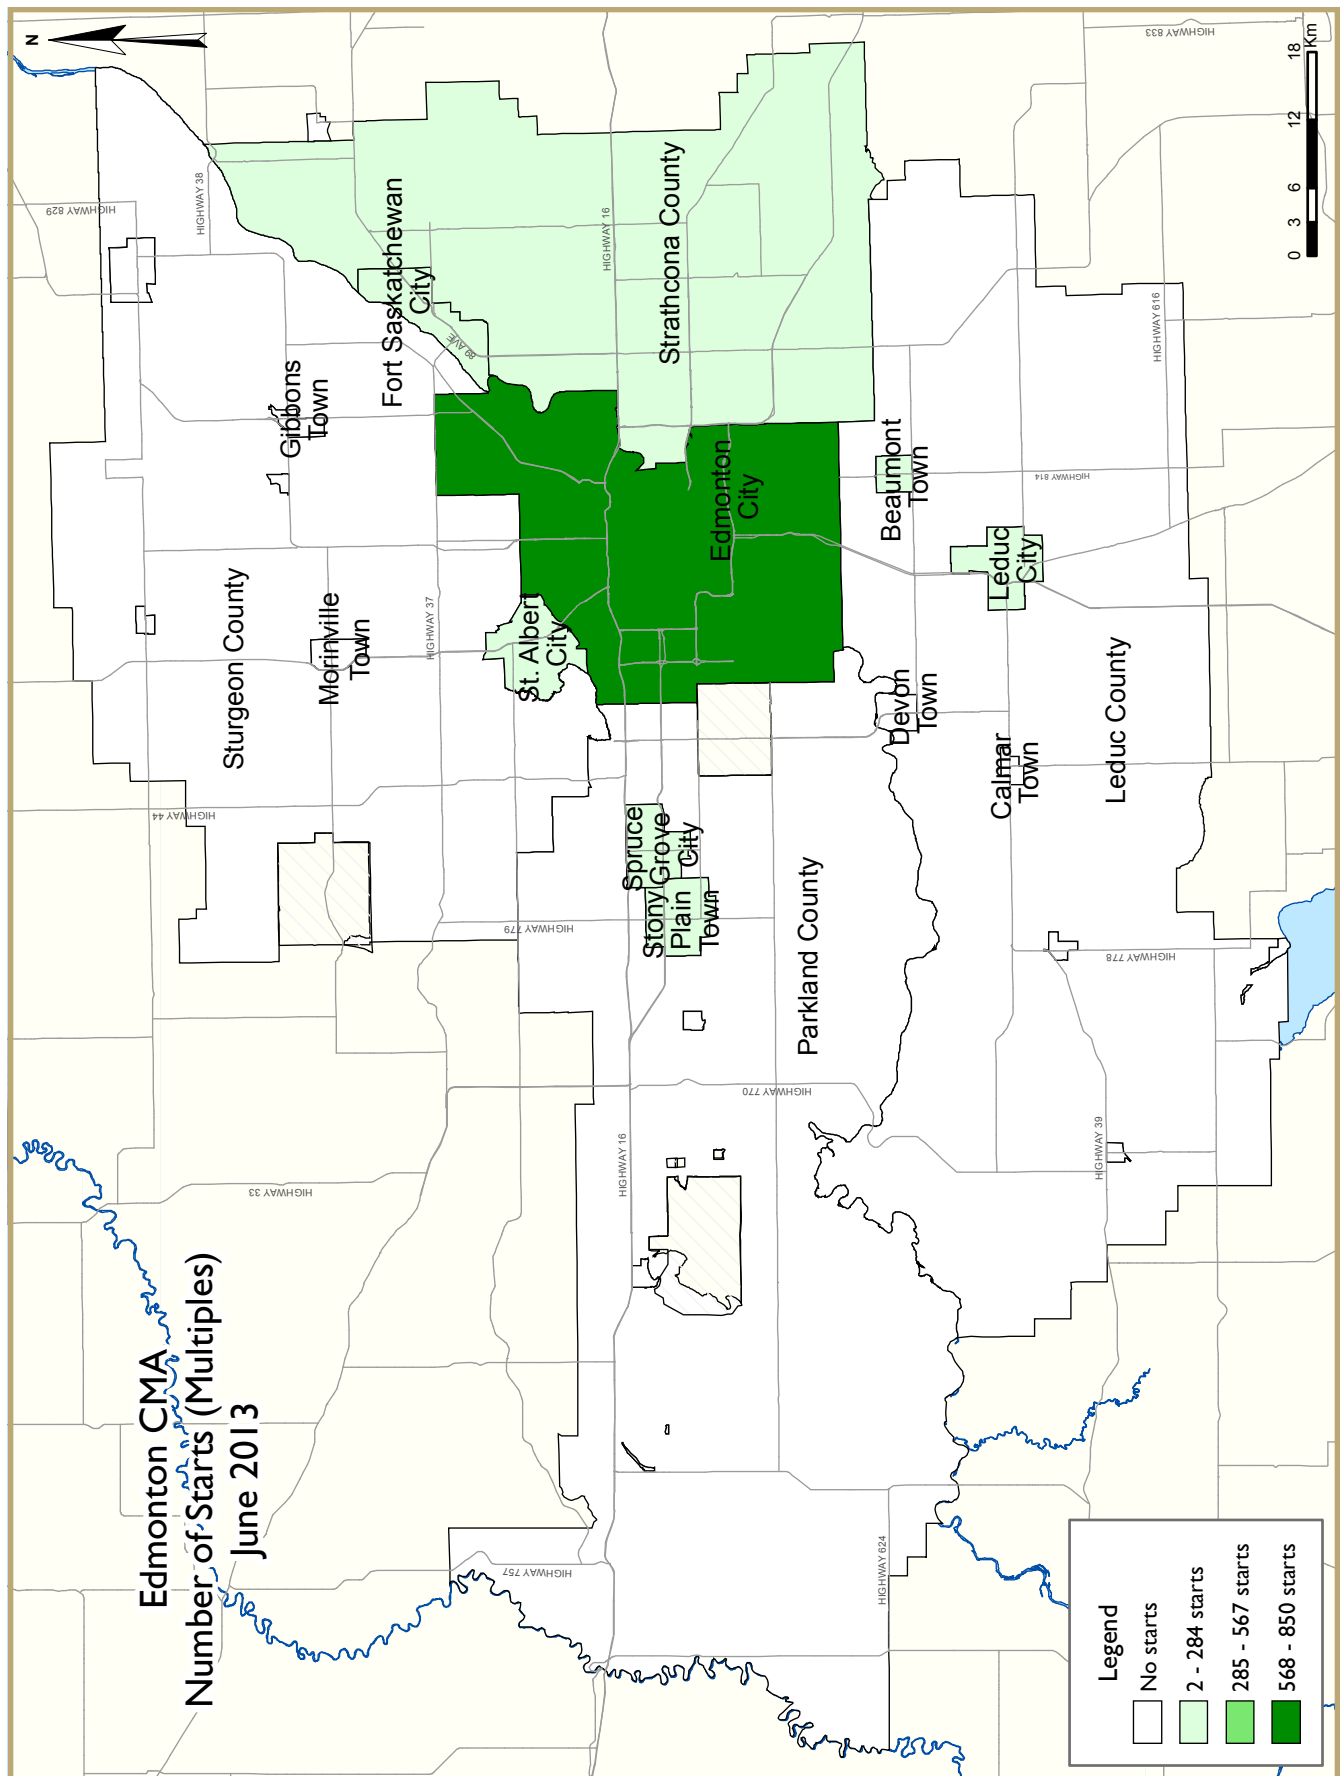

Strong labour market conditions attracted people from other countries and provinces. Migration to Alberta in the first quarter of 2013 continued to be strong. Net migration in the first quarter rose 33 per cent from 20,335 migrants in 2012 to 27,112 in 2013. Gains were experienced in international migrants with significant

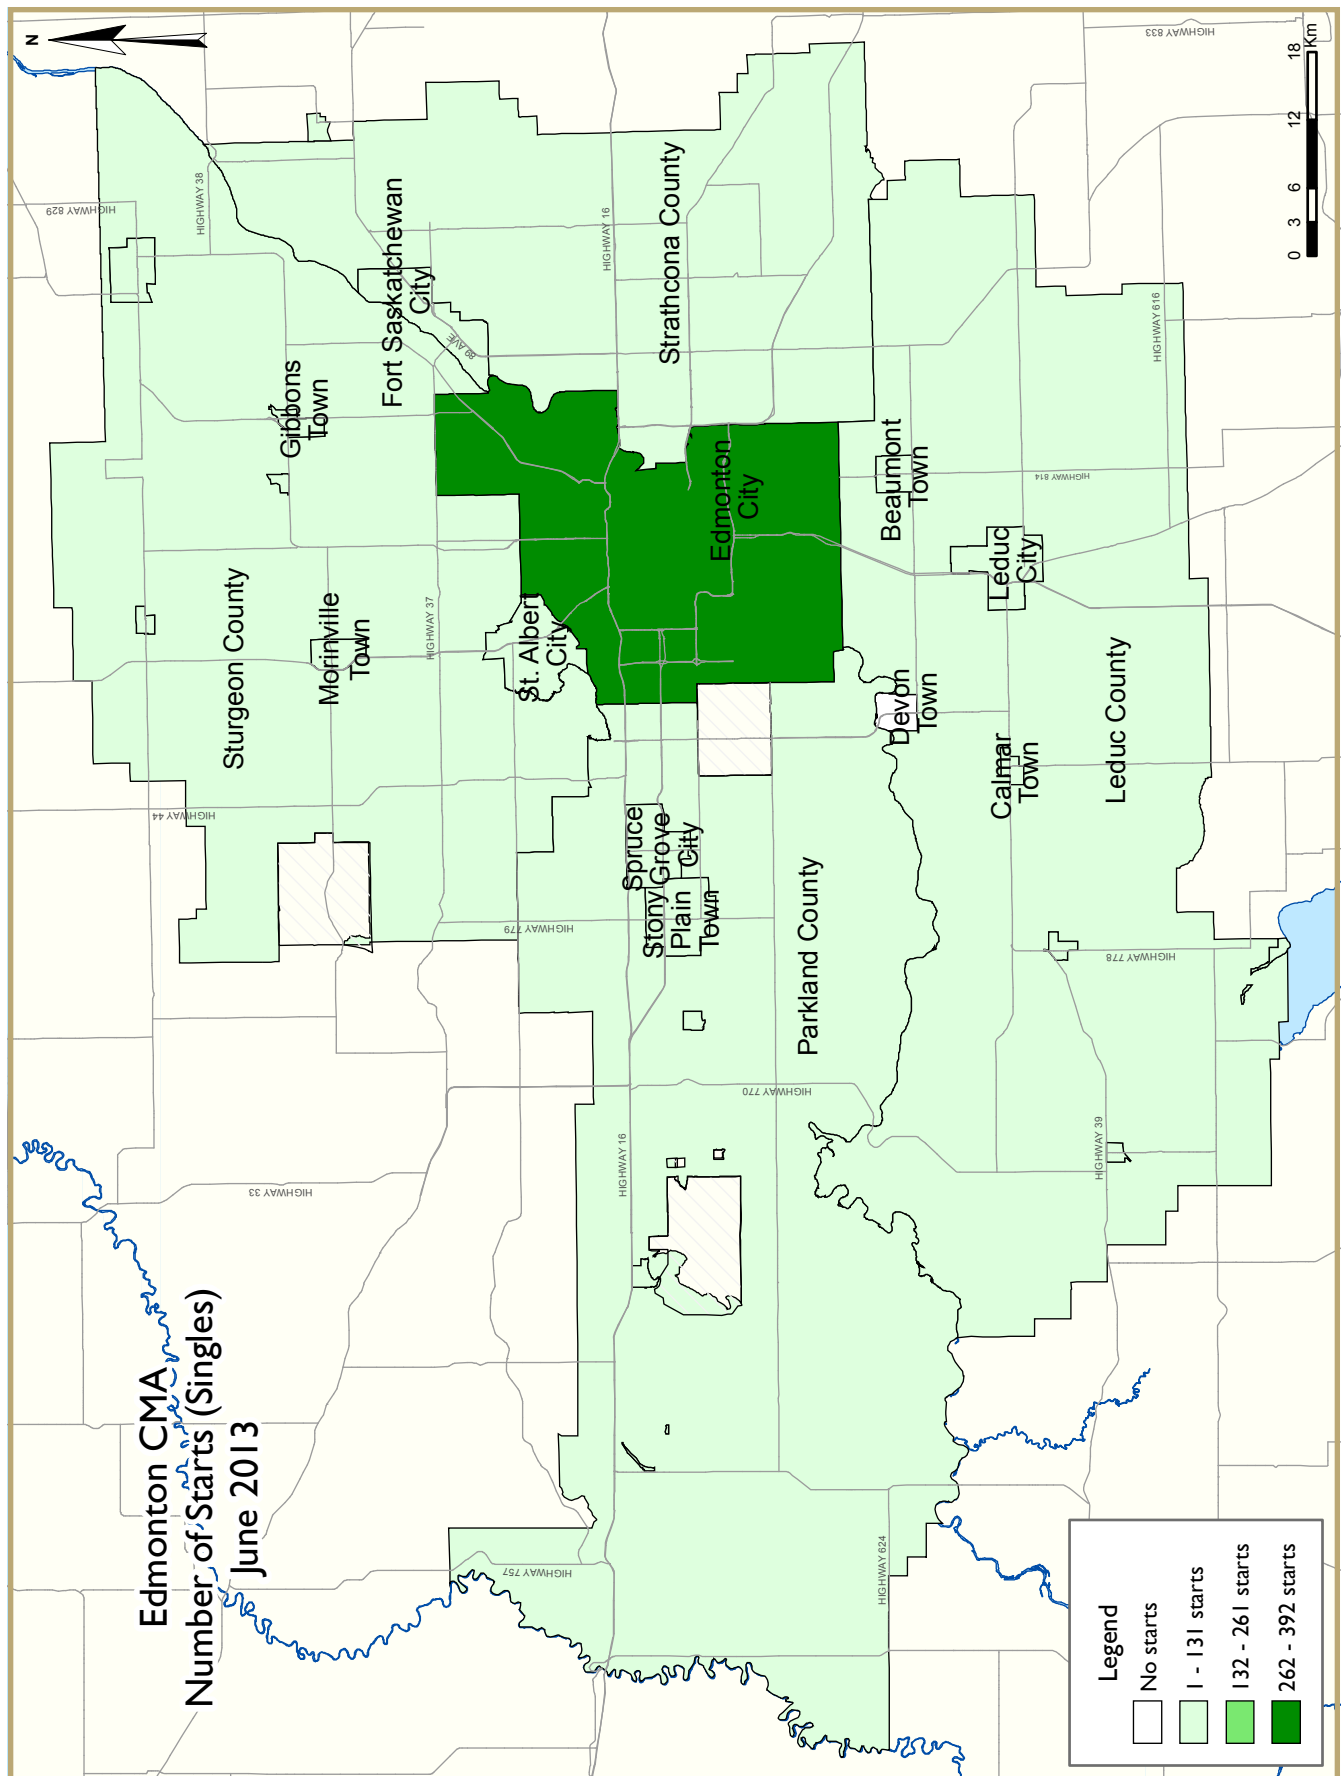

increases in non-permanent residents. Almost half of the net migration in the first quarter of 2013 came from interprovincial migration, where Alberta welcomed residents from every province. The majority of interprovincial migrants came from Ontario and British Columbia.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
