Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Data quality symbols

When the figure is not accompanied by a data quality symbol, it means that the quality of the data was assessed to be "acceptable or better" according to the policies and standards of Statistics Canada. To denote specific levels of "acceptable or better" quality, letter grades such as A to D should be used.

Letter, coefficient of variation and rating

| | |
|---|-------------------------------|
| A | 0.00% to 4.99% = excellent |
| B | 5.00% to 9.99% = very good |
| C | 10.00% to 14.99% = good |
| D | 15.00% to 24.99% = acceptable |

Notes

Totals may not add due to the rounding procedures used to protect the confidentiality of the respondents.

Acknowledgements

First to be thanked are Canadian farmers. The success of the Farm Financial Survey rests upon the continued assistance of the thousands of producers who participate every year.

Special thanks are extended to Agriculture and Agri-Food Canada for its contribution to the realization of this publication.

Highlights

Canadian farm financial overview—2011

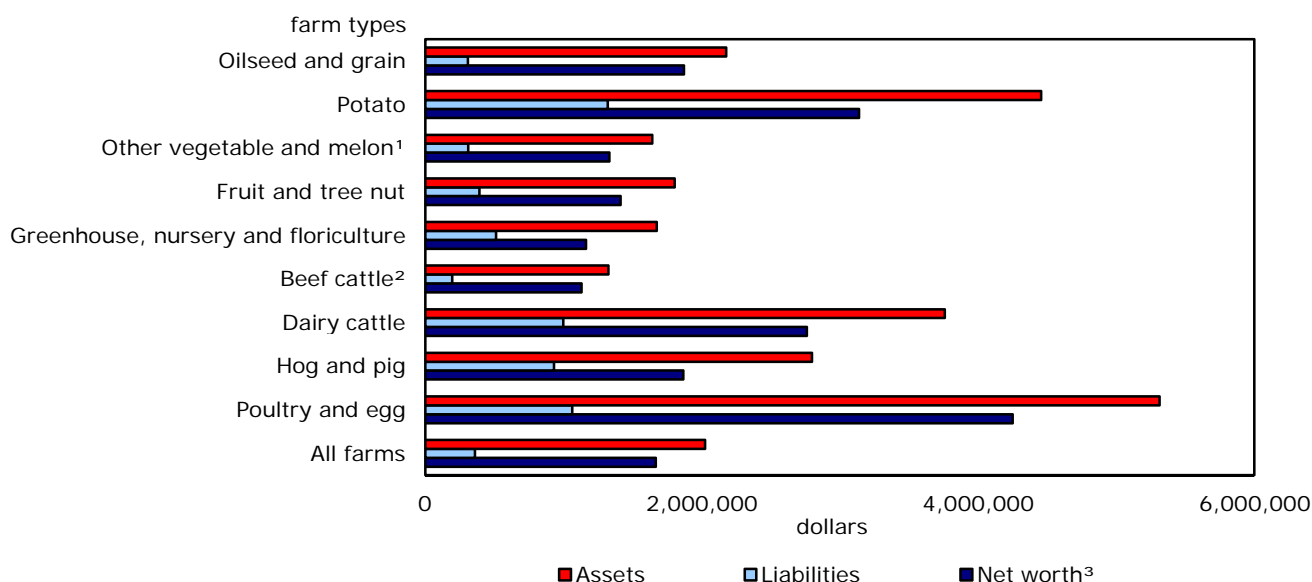

- According to the Farm Financial Survey, average farm assets in Canada increased 9% to \$2,025,000 in 2011 while average farm liabilities increased 4% to \$358,000. This was the first time that average farm assets surpassed the \$2.0 million dollar mark.
- The average market value of farm land and buildings continued to increase in 2011, by 11% to \$1,251,000 while the average market value of quota went up 4% to \$212,000. These were similar to the increases seen in 2010. The average value of market livestock continued to rise in 2011, increasing by 4%, while the average value of crops still for sale at year's end grew 5%. Overall, the average net worth of farm operations increased 10% to reach \$1,667,000. The average debt-to-equity ratio per farm, which is an indicator of a business's capacity to repay its debts, stood at 21% in 2011, down from 23% in 2010.
- Average net cash farm income increased for the second consecutive year, up 13% in 2011 to \$56,000. Average gross farm revenue increased by 9% while average farm expenses increased by 8%. In 2011, crop farms saw a 15% rise in average net cash farm income while livestock farms reported a 9% increase. Average program payments and insurance proceeds declined by 12% in 2011 after rising 9% in 2010.

Farm financial summary, by farm type—2011

- For grain and oilseed farms, average farm assets increased 14% in 2011 while average farm liabilities rose 15%. This resulted in an increase in average net worth of 14% to \$1,870,000. Average net worth of these operations has been on an upward trend for several years. The debt-to-equity ratio for Canadian grain and oilseed farms remained on par with 2010 at 16%. Average net cash income increased 19% in 2011 as the growth in average gross revenue (+15%) more than offset the rise in average operating expenses (+14%). The average grain and oilseed farm reported net cash farm income of \$74,000 in 2011 compared to \$62,000 in 2010. Grain and oilseed prices, which remained well above 2010 levels, largely accounted for the increase in gross revenue.
- In 2011, both average assets and average liabilities of beef cattle operations decreased with overall average net worth falling 3%. The debt-to-equity ratio decreased from 19% in 2010 to 17% in 2011. Average net cash farm income of beef cattle operations increased 59% in 2011 to reach \$14,000. Average gross farm revenue increased by 5% while average operating expenses increased by 3%. Cattle revenues increased on the strength of higher prices, as marketings fell due to a reduced supply of market animals.
- Among hog farms, the average net worth rose for the third consecutive year in 2011, climbing 21% to \$1,867,000. The average value of assets increased 18% while average liabilities went up 13%, after falling 3% the previous year. The debt-to-equity ratio of hog operations was 50% in 2011, a decrease of three percentage points over 2010. Average gross revenue of hog operations rose 16%, propelled by a 19% increase in average farm sales, particularly hog sales. Average hog revenues increased in 2011 mostly due to higher prices.
- For dairy farms, average farm assets increased 2% in 2011 while average farm liabilities fell 1%. This resulted in an overall increase of 4% in average net worth to \$2,761,000. Average market value of quota for a dairy farm decreased for the second consecutive year, down 2%. The debt-to-equity ratio decreased from 38% in 2010 to 36% in 2011. Dairy farms experienced an 8% decrease in average net cash farm income in 2011, with average expenses (+4%) rising more than average gross revenue (+1%).

Chart 1

Assets, liabilities and net worth by farm type, average per farm, Canada, 2011

1. Except potato.

2. Including feedlots.

3. Net worth is the difference between the market value of the farm assets and the value of the liabilities.

Sources(s): Statistics Canada, CANSIM, table 002-0065.

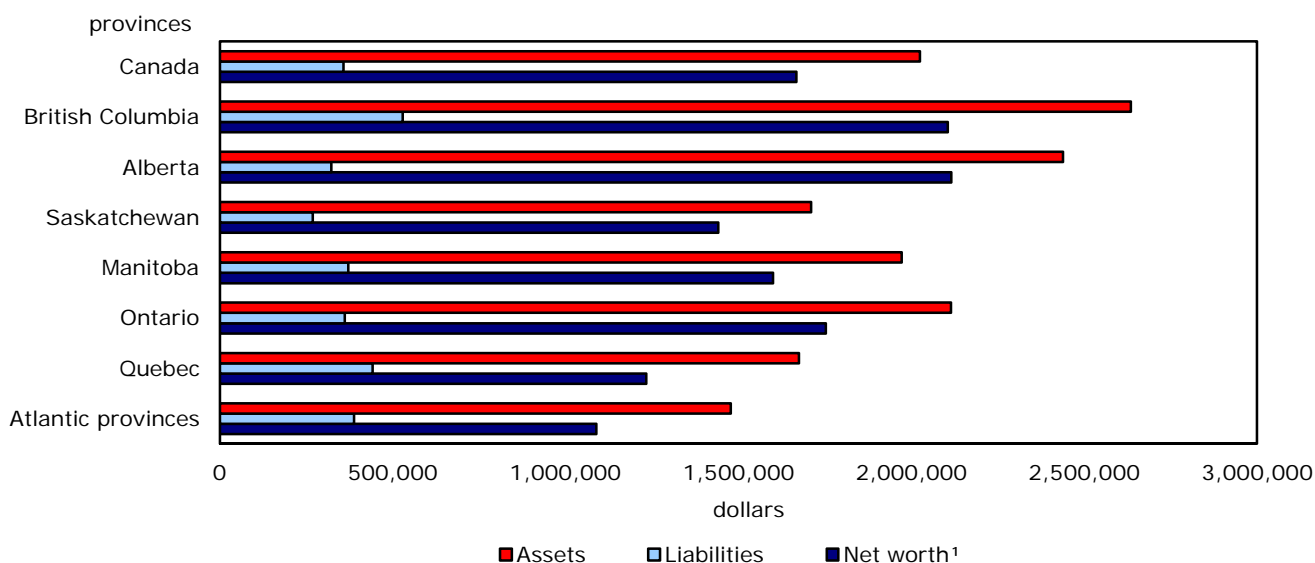

- The average value of assets for poultry and egg operations increased 8% in 2011, helping to drive average net worth up 10% to \$4,250,000. This followed a rise of 13% in 2010. The debt-to-equity ratio for poultry and egg farms declined to 25% in 2011 from 27% in 2010. Average net cash farm income of these operations went down 1% in 2011, following a 30% jump in 2010.
- Both average total assets (+9%) and liabilities (+3%) of Canadian potato farms increased in 2011. This resulted in an 11% increase in their average net worth to \$3,137,000. The debt-to-equity ratio of potato operations fell four percentage points to 42% in 2011. Potato farms experienced a 46% increase in average net cash farm income in 2011, with gross revenue increasing 2% while expenses were down 4%.
- Among vegetable farms, average total assets remained almost unchanged in 2011 while average liabilities decreased 3%. This resulted in a rise in average net worth of 1%. Fruit farms, on the other hand, saw an increase in both average assets and average liabilities in 2011. The average net worth of fruit farms increased 9%. Both vegetable operations and fruit operations saw their debt-to-equity ratio fell one percentage point to settle at 23% and 28%, respectively. The average net cash farm income of vegetable farms declined for the second consecutive year, down 11% in 2011 to \$47,000. In contrast, fruit farms experienced a 30% increase in average net cash farm income, following declines of 7% in 2010 and 57% in 2009.
- Average farm asset values of greenhouse, nursery and floriculture operations climbed 9% in 2011. This followed an increase of 5% in 2010. Meanwhile, average farm liabilities rose by 28%. Despite this rise in average liabilities, the average net worth of these operations increased by 3% from 2010 to \$1,162,000. After falling to 35% in 2010 from a high of 54% in 2005, the debt-to-equity ratio of greenhouse, nursery and floriculture operations rose to 44% in 2011. Average net cash farm income grew 9% as the increase in average gross revenue more than offset a rise in average operating expenses.

Farm financial summary, by province—2011

- In 2011, farms in Alberta had the highest average net worth of farms in Canada at \$2,116,000, followed closely by farms in British Columbia (\$2,106,000). In comparison, farms in the Atlantic provinces had the lowest average net worth at \$1,089,000.
- Alberta recorded the largest dollar increase in average net worth (+\$247,000), up 13% from 2010, followed by Ontario (+\$206,000), also up 13%. Notable gains were also observed in Manitoba (+12%), Saskatchewan and Quebec (+7% in both provinces).
- The value of average farm assets increased in every province except British Columbia and the Atlantic provinces, where they remained almost unchanged. The largest gain occurred in Alberta (+12%). The value of average liabilities also increased in every province, except the Atlantic provinces which posted a slight decline and Ontario which posted no change. Saskatchewan reported the largest increase (+11%).
- The debt-to-equity ratio remained highest in Quebec and in the Atlantic provinces, at 36%, and lowest in Alberta, at 15%.

Chart 2

Assets, liabilities and net worth by province, average per farm, 2011

1. Net worth is the difference between the market value of the farm assets and the value of the liabilities.

Source(s): Statistics Canada, CANSIM, table 002-0064.

Capital investments and sales

- In 2011, the average Canadian farm continued to invest in capital. Average investments per farm rose 12% to \$85,000 in comparison to 2009 (the last year for which capital investments and sales data are available). Farm machinery and equipment purchases continued to represent the bulk of these investments with \$41,000 spent on average per farm. Investments in farm real estate increased 13% to \$17,000 since 2009.
- In contrast, capital sales went down 11% compared with 2009. Sales of quota were largely responsible for this decrease.
- Overall, net capital investments (average investments minus average sales) increased by 23% compared with 2009. Average net capital invested in 2011 was \$64,000 compared with \$52,000 in 2009.

What's new

For Statistical Table 10 - Capital investments and capital sales, "Machinery and equipment traded in, sales" and "Machinery and equipment sold outright, sales" have been combined into "Farm machinery and equipment, traded in or sold".

Introduction

In 1993, the Farm Financial Survey (FFS) was created to replace the Farm Credit Corporation Survey (FCC). Since 1981, the FCC Survey had been conducted on an ad-hoc basis by the Farm Credit Corporation, Agriculture and Agri-Food Canada (AAFC) and Statistics Canada. The Farm Credit Corporation withdrew from this project, but there was still a need for AAFC and Statistics Canada to maintain a similar survey on a regular basis.

At present, AAFC finances this survey as they require accurate data concerning the current and long-term viability of farms and the financial health of farm families. The survey collects information on assets, liabilities, revenues, expenses, capital investments and capital sales. Crop information is also collected to measure physical characteristics of the farms.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

| Net cash farm income ³ | 2,029 | -47,720 | -118,706 | 15,169 | 46,622 |

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

| Net cash farm income ³ | 126,233 | 140,026 | 112,422 | 172,458 | 163,021 |

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

| Family wages from the farm | 17,351 ^B | 17,727 ^C | 20,054 ^B | 22,244 ^B | 23,101 ^C |
| Other expenses | 316,009 ^B | 349,071 ^B | 388,121 ^B | 420,979 ^B | 383,563 ^B |
| Net cash farm income ⁴ | 48,119 | 46,274 | 59,893 | 52,683 | 46,670 |

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Fruit and nut farms, other vegetable and melon farms, potato farms and greenhouse, nursery and floriculture farms data are only available at the Canada level due to confidentiality.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net capital investment is total capital investment minus total capital sales.
3. Capital investments and sales data are collected biennially beginning in reference year 2005.
4. "Machinery and equipment traded in, sales" and "Machinery and equipment sold outright, sales" have been combined into "Farm machinery and equipment, traded in or sold".

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net capital investment is total capital investment minus total capital sales.
3. Capital investments and sales data are collected biennially beginning in reference year 2005.
4. "Machinery and equipment traded in, sales" and "Machinery and equipment sold outright, sales" have been combined into "Farm machinery and equipment, traded in or sold".

Data concepts & methods

Introduction

In 1993, the Farm Financial Survey (FFS) was created to replace the Farm Credit Corporation Survey (FCC). Since 1981, the FCC Survey had been conducted on an ad-hoc basis by the Farm Credit Corporation, Agriculture and Agri-Food Canada (AAFC) and Statistics Canada. The Farm Credit Corporation withdrew from this project, but there was still a need for AAFC and Statistics Canada to maintain a similar survey on a regular basis.

At present, AAFC finances this survey as they require accurate data concerning the current and long-term viability of farms and the financial health of farm families. The survey collects information on assets, liabilities, revenues, expenses, capital investments and capital sales. Crop information is also collected to measure physical characteristics of the farms.

This overview provides a description of the sample design, sample selection procedures, collection methods and estimation procedures for the Farm Financial Survey.

Sampling frame

The target population for the survey consists of all Canadian farms that were active at the end of the reference year 2011. These are identified using the 2011 Census of Agriculture and updated by the usual survey programs. Due to operational constraints and respondent burden considerations, some specific farms are excluded from the target population to obtain the survey population. The exclusions are: farms from the 2011 Census of Agriculture with less than \$10,000 in sales from agricultural activities; institutional farms; community pastures; farms on First Nations reserves; and farms that are part of multi-holding companies. The lower boundary of \$10,000 has been used since FFS 1998.

A preliminary list frame containing all farms from the 2011 Census of Agriculture was created without the farms defined by the previously mentioned exclusion rules.

Users should be careful when comparing years of the FFS. The list frame for FFS2007 and earlier was created using the 2001 Census of Agriculture, while the list frame for FFS2008 to FFS2011 was created using the 2006 Census of Agriculture. This year, for FFS2012, the 2011 Census of Agriculture was used to create the list frame. Some differences in the data may be a result of changes in the list frame and might not be reflective of changes in the population.

Frame Coverage

Two main sources of frame under-coverage exist: new farms that started their activities after the 2011 Census of Agriculture and farms with sales less than the \$10,000 threshold in 2010 (the reference year for the 2011 Census of Agriculture) but which have surpassed the threshold since then.

Stratification of the List Frame

The frame was stratified according to AAFC's needs and recommendations by specialists in statistical methods. Since there was a requirement by AAFC for estimates by province, farm type and farm size (as measured by sales and farm capital), the list frame was stratified by these variables.

Within each province, the 11 farm types of primary interest are Dairy, Beef, Hogs, Poultry-Layers, Poultry-Broilers, Wheat/Grain/Oilseeds, Potatoes, Fruits, Vegetables, Greenhouses, and Feedlots (Alberta only). Farms that did not belong to one of the farm types of primary interest were assigned to one of the following "Other" farm types; Tobacco (Ontario only), Other Sod/Nursery, Other Animals, Other Crops.

Within each province, farm types were sub-divided into a maximum of four strata based on farm size, as measured by the revenue (which includes program payments) and the farm capital (value of machinery, livestock, and land and buildings owned) reported on the 2011 Census of Agriculture. All Farms were split into two sales groups. Then, the smaller of the two sales groups was further stratified into three groups based on the total farm capital.

Table 1 below illustrates the number of farms in the survey frame.

Text table 1
FFS survey frame and sample

| Province | 2011 Census of agriculture | Exclusions | Current FFS Frame | Initial Sample Size | Sample sent for Collection |
|---------------------------|----------------------------------|---------------|-------------------------|---------------------------|----------------------------------|
| Newfoundland and Labrador | 510 | 186 | 324 | 207 | 204 |
| Prince Edward Island | 1,495 | 357 | 1,138 | 413 | 404 |
| Nova Scotia | 3,905 | 1,576 | 2,329 | 601 | 593 |
| New Brunswick | 2,611 | 990 | 1,621 | 501 | 495 |
| Atlantic | 8,521 | 3,109 | 5,412 | 1,722 | 1,696 |
| Quebec | 29,437 | 4,666 | 24,771 | 2,310 | 2,284 |
| Ontario | 51,950 | 12,246 | 39,704 | 3,221 | 3,135 |
| Manitoba | 15,877 | 2,778 | 13,099 | 1,268 | 1,220 |
| Saskatchewan | 36,952 | 4,062 | 32,890 | 1,889 | 1,831 |
| Alberta | 43,234 | 7,884 | 35,350 | 2,054 | 2,005 |
| British Columbia | 19,759 | 9,623 | 10,136 | 1,431 | 1,403 |
| Total | 205,730 | 44,368 | 161,362 | 13,895 | 13,574 |

Sample Allocation

The initial sample size includes farms that have become out of scope since the 2011 Census of Agriculture and farms that participate in the Large Agricultural Operation Statistics (LAOS) program. These farms are excluded from Computer-Assisted Telephone Interviewing (CATI) collection. Farms that participate in the LAOS program are contacted by a specialized team at head office; 123 LAOS farms were sampled for this survey occasion.

The sample size is allocated first at the domain level, which is defined as province by farm type. It is then allocated at the stratum level, which is defined as size class.

Allocation to the Farm Types

The total sample size is determined by finding an acceptable balance between data quality and operational constraints. As in the previous occasion of the survey, the sample size was set at 14,000 farms. Reliable provincial estimates are required for key financial variables for the major farm types used in the stratification. Given this requirement, the sample size is allocated to each stratum based on targeted coefficients of variation (CV) for estimates of key financial variables. The CV is defined as the ratio of the standard error over the estimate.

The target CVs are set at 2% for provinces or farm types, and 4% for province and farm type combinations of interest. These targets were applied simultaneously to both revenue and assets, as provided in the 2011 Census of Agriculture.

Allocation to the Strata

Once the sample sizes by domain were determined, Neyman allocation was used to distribute the sample to the farm size strata. This method minimizes the farm type CVs for a given sample size. Some operational constraints had to be considered.

First, within a stratum, a minimum sample size was set to ensure that the stratum is represented despite possible non-response. This minimum was set at 5 (or the total stratum size if it was smaller than 5). Second, within a stratum, a minimum sampling rate (sample size divided by the population size) had to be satisfied to ensure that each farm would not represent a too important portion of the population at the estimation stage. In such a case, the estimates would become too dependent on a small number of farms and would be less reliable. The chosen minimum rate was 1/50, leading to design weights that did not exceed 50.

Sample Selection

The sample was drawn from the frame created from the 2011 Census of Agriculture.

Once the sample sizes to be drawn from each stratum were set, a simple random sample of farms was selected from within each stratum. This is done by assigning a random number to each farm within the stratum, sorting the farms accordingly, and then selecting from the list until the required sample size is reached.

Collection period and overlap with other surveys

Data collection for the current FFS took place from late June until early August 2012. The main advantage of this collection period is that having received the financial reports back from their accountants, the respondents are in a better position to reply to the financial questions. One disadvantage of the new collection period is that Statistics Canada carries out collection for several other agricultural surveys around this time. Thus, in order to reduce the burden on respondents, overlap with other surveys had to be controlled.

The July Livestock survey had a collection period close to the FFS; therefore a farm selected for both surveys was replaced by another farm for FFS. The new farm was selected randomly from available farms that were in the same FFS stratum and the same Livestock stratum. If such a replacement farm could not be found, the originally sampled farm was retained. This strategy reduced overlap between the two surveys by approximately 60%. The same coordination strategy was used to control the overlap with the Atlantic survey and the June Crops survey, reducing the overlap with the FFS by approximately 45% and 70% respectively.

The July Crops survey had a collection period that directly overlapped with the FFS collection period. It was decided to completely eliminate the overlap between these two samples. Sample coordination was used to minimize the overlap; after having reduced the overlap by almost 90%, the remaining farms were omitted from the FFS sample.

Types of Contact

Surveys prior to FFS1998 relied on personal interviews. Surveys since FFS1998 are conducted using telephone interviews. For this survey occasion, as has been done in recent years, a paper questionnaire was sent to the respondents for preparation purposes, and the survey was carried out as a telephone interview from the regional offices.

Estimation

The estimation process includes an edit and imputation procedure where basic verifications are performed on the survey data and imputations are done when required. The imputed survey data are used as input to the estimation system.

Sample Weights

The sample weights are computed as the ratio of the number of farms in the population over the actual sample size observed within each stratum. Farms that did not provide valid data, because they were a refusal, a no contact, or they failed a large number of edits, are excluded from the sample counts; the weights of the other sampled farms are increased to compensate for this non-response. This practice is referred to as raising factor adjustment. Sampled farms that were out of business retain their design weight, but all their data are set to zero. This is done to represent other farms that were on the frame, but were in fact out of scope.

Level Estimation

Once the weights have been calculated for each record, any level of required estimates may be obtained using domain estimation (Canada, provincial, crop districts, etc.). The estimates are accompanied by the appropriate CV's.

Data accuracy

Data reliability

The statistics contained in this publication are estimates derived from a random sample of Canadian farms and, as such, are subject to sampling and non-sampling errors. Therefore, the quality of the estimates depends on the combined effect of these types of errors.

Sampling errors

These errors arise because observations are made only on a sample and not on the entire population. The sampling error depends on such factors as the size of the sample, the variability of the characteristic of interest in the population, the sampling design and the method of estimation. For example, for a given sample size, the sampling error will depend on the stratification procedure employed, allocation of the sample, choice of the sampling units and method of selection. In sample surveys, since inference is made about the entire population covered by the survey on the basis of data obtained from only a part of the population, the results are likely to be different than if a complete census was taken under the same general survey conditions. The most important feature of probability sampling is that the sampling error can be measured from the sample itself.

Non-sampling errors

These errors are present whether a sample or a complete census of the population is taken. Non-sampling errors may be introduced at various stages of data processing (such as coding, data entry, editing, weighting, tabulation, etc.) and include response errors introduced by the farm operators as a result of misclassifications. All efforts are undertaken to minimize non-sampling errors through extensive edits and data analysis, but some of these errors are outside the control of Statistics Canada.

Sampling error measures

The sample was selected using stratified simple random sampling. This means that farm operations were randomly selected into each stratum. The resulting sample is just one of many possible samples that could have been selected. If it was possible that each one of these samples could be surveyed under essentially the same conditions, with an estimate calculated from each sample, it would be expected that the sample estimates would differ from each other. The average estimate derived from all these possible sample estimates is termed the expected value. The expected value can also be expressed as the value that would be obtained if a census enumeration was taken under identical conditions of collection and processing. An estimate calculated from a sample survey is said to be precise if it is near the expected value.

Sample estimates may differ from this expected value of the estimates. However, since the estimate is based on a probability sample, the variability of the sample estimate with respect to its expected value can be measured.

Guides to the precision (reliability) of sample estimates or potential size of sampling errors are provided through sampling variance (defined as the average, over all possible samples, of the squared difference of the estimate from its expected value) or the standard error (square root of the sampling variance) of the estimates. The standard error and variance are measures of precision in absolute terms. The coefficient of variation (CV), defined as the standard error divided by the sample estimate, is a measure of precision in relative terms. For comparison purposes one may more readily compare the sampling error of one estimate to the sampling error of another estimate, through the use of the coefficient of variation. In this publication, the coefficient of variation is used to measure the sampling error of the estimates.

The estimates contained in this publication have been assigned a letter to indicate their coefficient of variation (expressed as a percentage). The letter codes represent the following coefficients of variation:

Text table 1
Coefficients of variation

| Rating | CV Range | Code |
|--------------------------------|----------------|------|
| excellent | 0.00 to 4.99 | A |
| very good | 5.00 to 9.99 | B |
| good | 10.00 to 14.99 | C |
| acceptable | 15.00 to 24.99 | D |
| use with caution | 25.00 to 34.99 | E |
| too unreliable to be published | ≥ 35.00 | F |

Coefficients of variation

The variability in the estimate can be obtained by constructing confidence intervals around the estimate using the estimate and the coefficient of variation. Thus, for our sample, it is possible to state with a given level of confidence that the confidence interval constructed around the estimate will cover the expected value. For example, if an estimate of \$15,000,000 has a coefficient of variation of 10%, the standard error will be \$1,500,000 or the estimate multiplied by the coefficient of variation. It can then be stated that the interval whose length equals the standard deviation about the estimate, i.e., between \$13,500,000 and \$16,500,000, will cover the expected value over repeated surveys, 68% of the time. Or, it can be stated that the interval whose length equals two standard deviations about the estimate, i.e., between \$12,000,000 and \$18,000,000, will cover the expected value over repeated surveys, 95% of the time.

The CV is not always a good indicator of the precision for some variables. This is particularly true when the different values of a variable are positive and negative. In that case, the standard error of the estimate tends to be large and the estimate tends to be small or approaching zero, thus resulting in a high CV. Therefore, the estimate might be near the exact population value and, at the same time, be rated as being unreliable. The variable net cash income is in that situation and therefore, its CV is not used. The estimates not accompanied by a data quality symbol are assessed to be “acceptable or better.”

Non- sampling error measures

The exact population value is aimed at or desired by both a sample survey as well as a census. We say the estimate is accurate if it is near this value. Although this value is desired, we cannot assume that the exact value of every unit in the population or sample can be obtained and processed without error. Any difference between the expected value and the exact population value is termed the bias. Systematic biases in the data cannot be measured by the probability measures of sampling error as previously described. The accuracy of a survey estimate is determined by the joint effect of sampling and non-sampling errors.

Note on farm type

Since the 2003 Farm Financial Survey (FFS), farm type has been based on the North American Industry Classification (NAICS). For further detail, please refer to the Whole Farm Database Reference Manual, Catalogue no. 21F0005G, "Table A.1 Farm type codes and titles based on NAICS structure and availability by data source".

Note on farm counts

Note that some of the change in farm counts from year to year is due to revenue variability. Farms may be in scope one year and out of scope another year based on the \$10,000 threshold used to determine the population for the Farm Financial Survey.

Comparability of data and related sources

The comparability of FFS data with other Statistics Canada sources such as the Agricultural Economic Statistics series (AES), the Census of Agriculture, and the Agriculture Taxation Data Program (ATDP) of Agriculture Division, is affected by differences in concepts, target populations (e.g. exclusions) and methods. The compound effect of those differences can contribute to fairly significant variation, even in some trends. For example, assets, liabilities, revenues and expenses for the FFS are not directly comparable with the above sources. As a result of the residual method used to derive net income, small differences in revenues or expenses can result in large differences in net income level and yearly change.

Target population

The target population is not generally comparable to those of other data sources, as some inclusions and exclusions differ among the projects.

Two important exclusions have an impact on the FFS estimates: farms with less than \$10,000 in gross farm receipts and multi-holding operations. Some other inclusions and exclusions that differ among the projects also have important effects on the data. For example: exclusion of inter-farm sales (within a province) from AES receipts and expenses; exclusion of corporate operations with less than \$25,000 in gross receipts and less than 50% of receipts from agricultural activities from ATDP (enterprise concept).

Methods

Some factors that may contribute to differences in estimates include data sources (e.g. administrative data, self enumerated information) and differing respondents (e.g. farm operators, tax filers). Also, reporting for FFS and ATDP contain an unmeasured mix of cash and accrual accounting, as well as fiscal years that differ from the calendar year, while AES data are based on cash accounting and a fiscal year end of December 31.

Glossary

Capital investments. Purchase or acquisition of some farm related building, structure or item from which a benefit will be derived over a period of time. Included are purchases of land and buildings, land improvements, construction or renovation of farmhouses, storage for manure, pesticide, chemical or fuel, and other buildings, environmental protection improvements, purchases of breeding and replacement livestock, quota, farm machinery and equipment and other farm assets. The value of the Goods and Services Tax (GST), Harmonized Sales Tax (HST), Provincial Sales Tax (PST) and Quebec Sales Tax (QST) is excluded from the values reported.

- **Land and buildings.** Included are the purchase of farmland, farmhouse and any other farm buildings.
- **Land improvements.** Included are expenditures to make land suitable for general agricultural use such as clearing of land, levelling, irrigation, drainage and orchard planting.
- **House construction or renovation.** Included is the construction of a new farmhouse or any renovations to the existing farmhouse.
- **Manure storage construction or renovation.** Included is construction or any renovations of concrete manure tanks and concrete-walled manure storage, including composting building and facilities.
- **Construction or renovation of a storage facility for pesticides, chemicals or fuel.** Included is construction or any renovations of buildings or facilities used only for storing pesticides or chemicals and tanks for storing fuel or gasoline.
- **Other building construction or renovation.** Included is construction or any renovations to barns, silos, sheds or garages.
- **Environmental protection improvements.** Included are shelterbelts, windbreaks, buffer strips or fences for waterways protection.
- **Breeding and replacement livestock.** Livestock purchased with the intention of being kept on the operation for breeding purposes and for more than one year. Included are bulls, cows, heifers for replacement, boars, sows, bred gilts, rams, ewes, replacement lambs and goats for milk or hair.
- **Quota.** An entitlement or right to sell or deliver a certain amount of an agricultural product, in particular, milk, eggs, poultry and tobacco. Depending on the product and the regulations prevailing in the province of sale, quotas may or may not be purchased separately from real estate. Only quota purchased separately from other assets are reported.
- **Farm machinery and equipment.** Included are the purchase of new or used farm cars and trucks, tractors, trailers, office equipment and equipment for feeding, tillage, seeding, harvesting, processing, etc. All values reported reflect the gross expenditure before trade-in, and include leased farm machinery and equipment since 2001.
- **Other farm assets.** Included are purchases of stocks, shares, bonds, Guaranteed Investment Certificates (GICs), mutual funds and any reinvested dividends. Excluded are contributions to RRSPs.

Capital sales. Included are monies received from the sale of capital items such as land and buildings, farm machinery and equipment (whether traded in or sold outright), quotas and breeding and replacement livestock.

Only quota sold separately from other assets are reported. The value of the GST, HST, PST and QST is excluded from the values reported.

- **Land and buildings.** Included is the sale of farmland, farmhouse and any other farm buildings.
- **Farm machinery and equipment traded-in or sold outright.** Included are cars and trucks used in the farm business.
- **Quota.** As defined in Capital Investments above. Only quota sold separately from other assets is reported.
- **Breeding and replacement livestock.** Includes the value of breeding and replacement livestock sold. Excluded is the value of culls sold for slaughter. Sales of culls are recorded as livestock (beef or hog) income.
- **Other farm assets.** Included are sales of stocks, shares, bonds, Guaranteed Investment Certificates (GICs) and mutual funds. Excluded are withdrawals from RRSPs.

Current assets. Unrestricted cash and any other asset that, in the normal course of operations, is expected to be converted into cash or consumed in the production process within one year or within the normal operating cycle (where the cycle is longer than a year). Included are cash, savings, accounts receivable, supply inventories, market livestock and crops for sale. All items are valued at current market value.

- **Cash and short term investments.** Cash and short-term investments include cash and all investments purchased with farm profits due to mature within one year.
- **Accounts receivable.** An amount owed to the business usually arising from the sale of goods or services. Included are uncollected receipts for grain and livestock sales, custom work and program payments.
- **Crops for sale.** Includes the value of all harvested crops destined for market including greenhouse and nursery horticulture products..
- **Market livestock.** The value of livestock expected to be sold for slaughter: heifers for slaughter or feeding, steers, calves, pigs (excluding boars and sows), slaughter lambs, poultry, goats for meat and culls, etc.
- **Supplies on hand (inputs).** Included are the value of supplies on hand (feed, fertilizer, fuel, seed, pesticides, wood used to heat buildings) and other supplies used for farm businesses.
- **Other current farm assets.** Other current assets include prepaid expenses and the value of unsold livestock products (e.g. milk, eggs, pelts).

Current liabilities. The portion of debt whose repayment period is less than 12 months and which is outstanding as of December 31. Not included are annual or semi-annual payments on long-term liabilities that will be due within the current year.

Current market value. The most probable price an asset would bring in a competitive and open market under all conditions required for a fair sale.

Debt-to-equity ratio. The debt-to-equity ratio is an indicator of a business's capacity to repay its debts. It is calculated by dividing total liabilities by equity (net worth).

Expenses (operating). The business costs, generating a cash outlay, incurred by farm operators for goods and services used in the production of agricultural commodities. Capital investments, capital cost allowances (depreciation), and the value of inventory adjustments, are excluded from the operating expenses.

- **Interest expenses.** Included is interest on money borrowed to earn farming income. Examples are interest charges on real estate mortgages and loans to buy farm machinery and equipment. Excluded are payments made on the principal portion of liabilities.

- **Family wages from the farm.** Gross wages and salaries paid to the operator, their spouse and never married children residing in the same household. Wages and salaries earned by family members and operators off the farm are excluded, as are wages and salaries paid to hired help or paid to other operators and their families.
- **Other expenses.** Included are expenses associated with crop production (e.g. fertilizer, lime, pesticides, insurance, seed and plants) and production of livestock (e.g. livestock and poultry purchases, feed, supplements, insurance, veterinary fees, medicine). Also included are items such as wages and salaries paid to hired help and other operators' families, machinery, truck and auto expenses (fuel, repairs, licences, insurance, rental and leasing expenses), utilities, custom work, property taxes and insurance for farm buildings.

Farm type. The farm type classification is self-reported, mainly based on the percentage of the sales of the major commodity (or commodity groups). For purposes of statistical tabulations, ten major farm types have been selected and are identified as follows:

- **Grains and oilseeds.** Farms with gross agricultural revenue of more than 50% from the sales of wheat, oats, field peas, dry beans, lentils, mustard, flaxseed, rapeseed (canola), corn for grain, soybeans, etc. and mixed grains.
- **Dairy cattle and milk production.** Farms on which more than 50% of the gross agricultural revenue (excluding dairy subsidies) is derived from the sale for milk and cream for both fluid and industrial milk purposes.
- **Hog and pig.** Farms with more than 50% of the gross agricultural revenue derived from the sale of hogs, weaners, market pigs, gilts, feeders, sows and boars, including the sales of cull hogs.
- **Beef cattle ranching and farming, including feedlots.** Farms with more than 50% of the gross agricultural revenue derived from the sale of cattle, including beef cattle finishing, cattle feedlot operations, cattle for slaughter, dairy heifer replacement stock and semen.
- **Poultry and egg.** Farms on which more than 50% of the gross agricultural revenue is derived from the sale of chickens, pullets, hens, cockerels, capons, commercial broilers, roasters or eggs. Also includes revenues from the sale of turkeys, geese, ducks and other fowl. Starting in 2002, hatcheries are included with this farm type – note that this information was not collected for hatcheries prior to 2002 for this survey. Poultry and Egg are published together, but separate estimates are available upon request.
- **Fruit and nut.** Farms deriving more than 50% of the gross agricultural revenue from the sale of fruits.
- **Other vegetable and melon.** Farms deriving more than 50% of the gross agricultural revenue from the sale of vegetables (excluding potatoes and greenhouse vegetables).
- **Potato.** Farms deriving more than 50% of the gross agricultural revenue from the sale of potatoes.
- **Greenhouse, nursery and floriculture.** Farms deriving more than 50% of the gross agricultural revenue from the sale of greenhouse and nursery products, including vegetables, sod and flowers.
- **Other.** All farms not included in the classifications above are considered other farm types. Included are farms with revenues principally from the sale of other livestock and associated products (horses, ponies, furs, sheep and goats, bees and honey, bison, emus, llamas, aquaculture [fish], mixed livestock and other mixed operations). Included are revenues from the sale of other crops and associated products (hay, forages, small seeds, ginseng, sugar beets, tobacco, mushrooms, spice crops, bulbs, and forest and maple products). Also, includes revenues for agricultural custom work and agricultural rental income.

Income Stabilization Account Balances. From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

LAOS (Large Agricultural Operations Statistics): The universe of large agricultural operations statistics consists of two types of enterprises; large operations where the enterprise's agricultural activities fall under one operation and multi-operations where agricultural activities are divided among several farms. Multi-operations are excluded from the Farm Financial Survey. Large agricultural operations are considered large based on their gross agricultural revenue, which must be \$5 million or more per year in all provinces except Alberta where \$7 million in gross revenue is required. Multi-operations must have an annual gross farm revenue of \$2.5 million or more.

Long-term assets. An asset that has a useful life greater than one year. Such an asset, which can be either a tangible or intangible item, is usually not purchased for resale, but is to be used over time to produce saleable products. Included are land and buildings, machinery and equipment, quota and productive assets such as a breeding herd and investments. All items are valued at current market value.

- **Long-term investments.** Long-term investments of the operation include all money investments due to mature after December 31 of the reference year, such as bonds, shares, long-term Guaranteed Investment Certificates (GICs), mutual funds and co-operative shares.
- **Other long-term farm assets.** Includes off-farm site warehouses, grain condominiums and other buildings owned by operations, as well as nursery products such as trees and shrubs (other greenhouse and nursery horticulture products are included in current assets as inventory under crops for sale).

Long-term liabilities. That portion of a debt, with a maturity date beyond the current year or beyond the normal operating cycle (where the cycle is longer than a year), which is outstanding as of December 31.

Market sales. Revenues from the sale of agricultural commodities and services, excluding program payments.

Net cash farm income. Revenue (operating) minus expenses (operating), excluding capital cost allowances (depreciation); the value of inventory adjustments; the sale of land and buildings, machinery, equipment and quota; and capital investments. It represents the amount of money available for debt repayment, investment or withdrawal by the owner(s).

Net worth. The difference between the market value of the farms assets and the value of the liabilities.

Program payments and insurance proceeds include payments related to current agricultural production and paid directly to producers; included are payments from private and public insurance policies. However, it does not attempt to cover all payments made to farmers, nor does it represent total government expenditure under all assistance programs.

Examples of included programs are:

- AgriStability;
- AgriRecovery programs (e.g., B.C. Bovine tuberculosis, Alberta Seed Potato Assistance, Saskatchewan Farm & Ranch Water Infrastructure, etc);
- Cull Breeding Swine Program;
- Quebec's Assurance stabilisation des revenus agricoles (ASRA);
- Rebates (e.g., fuel tax, property tax, farm GST/HST, Young Farmer Rebate);
- private hail insurance;
- Business Risk Management (BRM);
- These payments may also include compensation received for crop damage due to wildlife or for leaving the farmland in its natural state for wildlife.

Revenue class. Predetermined levels of total operating revenues. These levels are:

\$10,000 to \$24,999

\$25,000 to \$49,999

\$50,000 to \$99,999

\$100,000 to \$249,999

\$250,000 to \$499,999

\$500,000 to \$999,999

\$1,000,000 and over

Revenues (operating). The revenues generated from the sale of agricultural commodities and services, as well as agricultural payments and subsidies.

- **Farm sales.** Included are revenues from sales of grains, oilseeds and specialty crops, dairy products, hogs, cattle, poultry, eggs, horticulture products, and other commodities and services as outlined in the description of farm types.
- **Program payments and insurance proceeds.** As defined above.

Total assets. Included are all "tangible and intangible items of value" as of December 31. It is the sum of current assets, breeding livestock, machinery and equipment, quota, land and buildings, and other financial investments.

Total liabilities. Include all obligations of a business arising from past transactions that are to be paid to various lenders in the future. These lenders include the federal government (Farm Credit Canada, Advance Payments Program), provincial governments, chartered banks, trust companies, treasury branches, caisses populaires, credit unions, machinery and supply companies and private individuals. Total liabilities are the sums of current and long-term liabilities.
