Fisheries and Marine Service Data Reports

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Fisheries and Marine Service, namely, fisheries management, technology and development, ocean sciences and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records by the Pacific Biological Station, Nanaimo, B.C. The series name was changed with report number 26.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

Service des pêches et des sciences de la mer Rapports statistiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il n'y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Service des pêches et de la mer, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1-25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer, par la Station biologique du Pacifique, Nanaimo (C.-B.). Le nom de la série a été modifié à partir du numéro 26.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

BRITISH COLUMBIA HERRING SAMPLING
DATA FOR THE 1970-71 SEASON

by

A. S. Hourston

Department of Fisheries and Oceans
Resource Services Branch

ABSTRACT

Hourston, A. S. 1980. British Columbia herring sampling data for the 1970-71 season. Can. Data Rep. Fish. Aquat. Sci. No. 229: 57 p.

Biological samples of herring taken during the 1970-71 season are listed by sample number and by gear, section and week. Data on age, length, weight, sex and maturity for individual fish are listed by sample. The age composition, and the average weight, average length, and percent females at age are arrayed for each sample by section, week, gear, and locality. Procedures for collecting and processing the samples and for compiling the data are outlined, as is the role of these data in annual stock assessment analyses.

Key words: Clupea harengus pallasi, sampling, age composition, fish weight, fish length, sex ratio.

RÉSUMÉ

Hourston, A. S. 1980. British Columbia herring sampling data for the 1970-71 season. Can. Data Rep. Fish. Aquat. Sci. No. 229: 57 p.

Des échantillons biologiques de hareng capturé pendant la saison de 1970-1971 sont énumérés par numéro d'échantillon et par engin, par section et par semaine. Les données sur l'âge, la longueur, le poids, le sexe et la maturité de chaque poisson sont données par échantillon. La composition par âge et le poids moyen, la longueur moyenne et le pourcentage de femelles pour chaque âge sont indiqués pour chaque échantillon par section, semaine, engin et lieu. Les procédures de rassemblement et de traitement des échantillons et de compilation des données sont indiquées, tout comme le rôle de ces données pour les analyses des évaluations annuelles des stocks.

Mots clés: Clupea harengus pallasi, échantillonnage, composition par âge, poids du poisson, longueur du poisson, rapport des sexes.

INTRODUCTION

Measures of biological characteristics of individual fish such as age, length, weight, sex and maturity form one of the three sources of monitoring data used for annual assessments and forecasts of British Columbia herring stocks (Hourston and Schweigert 1980). These data, along with monitoring data on catch (e.g. Hourston 1980a) are processed by computer analyses to estimate the age composition and the average weight, average length, percent females and numbers and tons of fish in each year-class represented which were caught in each section (Figs. 1, 2) during each week of the season (Hourston 1980c). The results are then summarized by season and combined with similar estimates of spawning escapements from egg depositions (Hourston 1980b) to add data for this year to an ongoing inventory of the stocks (Hourston 1980d) for three levels of geographic or stock groupings (Hourston and Hamer 1979). This inventory, along with estimates of spawning requirements, forms the basis of further analyses to forecast the available catch for the coming season (Hourston 1979).

Detailed sampling data have been archived in this way since the 1950-51 season (Hourston and Isaacson 1972), providing a 21-yr series of basic data accessible for analyses and modeling.

METHODS

COLLECTION AND PROCESSING OF SAMPLES

Samples are collected from processing plants by port samplers, from commercial catches by Fishery Officers and from test fishing and research catches by biologists and technicians. Most samples are frozen for processing at a laboratory in North Vancouver following standard procedures described by Hourston and Miller (1980). Most of the research and offseason samples are processed at the Pacific Biological Station.

DATA COMPILATION AND SCREENING

Numerical data are recorded and other data are coded (Tables 1, 2) onto computer tapes in Vancouver following procedures described by Hourston and Miller (1980). A copy of each year's tape is forwarded to the Pacific Biological Station after the end of each herring season (June 30). The data are then screened by computer for relationships between age, length and weight which are outside the normal for the coast as a whole (mean \pm 2 standard deviations). Anomalies are listed and the associated data checked

for possible errors in recording or coding. The basic biological features used in subsequent analyses (age composition and the average length, average weight, and percent females at age) are then calculated for each sample.

RESULTS

Samples for the 1971-72 season are listed by sample number (Table 3) and by section and week for seine (Table 4) and gillnet (Table 5) catches. Basic data for individual fish are listed by sample (Table 6). Finally, age composition (Table 7) and average weight (Table 8), average length (Table 9) and percent females (Table 10) at age for each sample are listed by section, week, gear, and locality.

ACKNOWLEDGMENTS

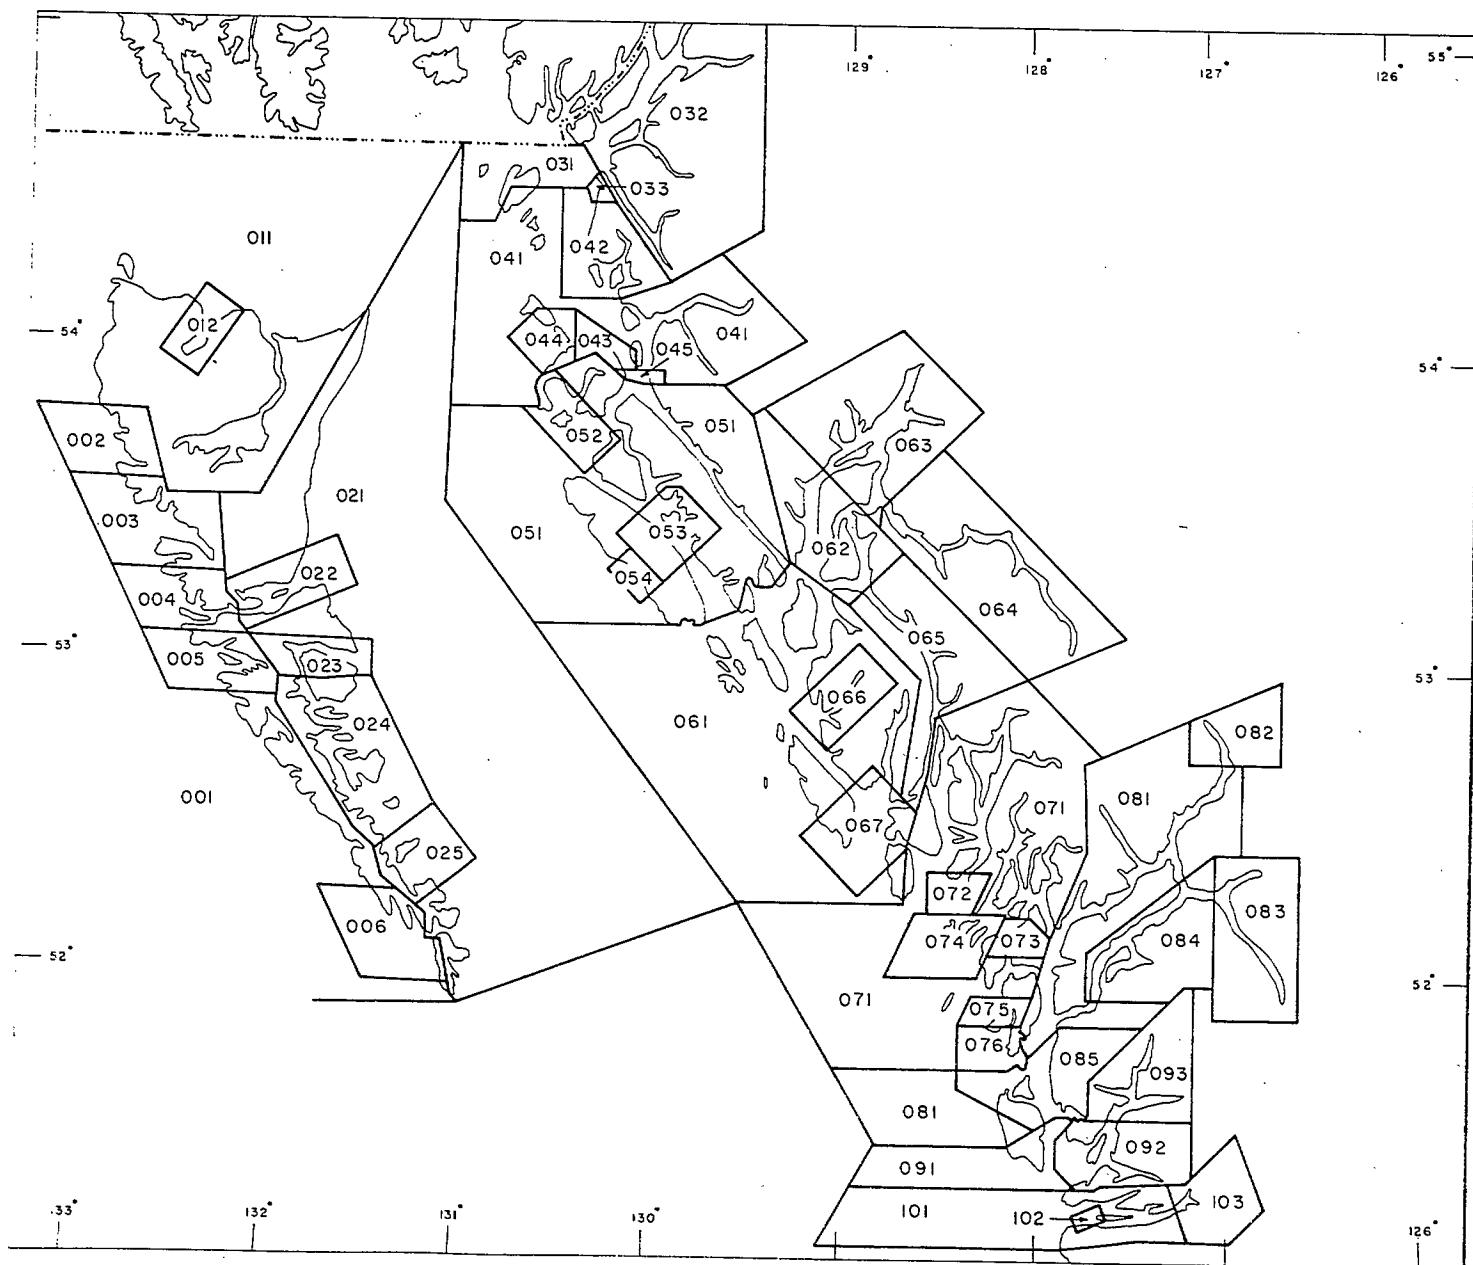

The major role played by Mr. Lloyd Webb, Resource Service Branch in Vancouver in supervising the collection and processing of samples is gratefully acknowledged. The initial data tapes were checked and revised at the Pacific Biological Station by Mr. Marc Hamer. The figures were prepared by Mr. Doug Miller.

Table 2. Maturity stages for Pacific herring sampled at the Pacific Biological Station. The descriptions of each stage are adapted from criteria developed for Atlantic herring (Bowers and Holliday 1961; Parrish and Saville 1965) and modified to suit the unique characteristics of Pacific herring which are exclusively winter-spring spawners.

| Stage | State of maturity | Gonad appearance | Description | Timing |
|-------|-------------------|------------------|--|--|
| I. | Undeveloped | Thread-shaped | Virgin herring with small gonads, less than 2 mm broad. Accurate macroscopic determination of sex not usually possible. | Year-round for young herring, usually less than 150 mm in standard length. |
| II. | Starting | Ribbon-shaped | Gonads increased in breadth to 3-5 mm. Sex determination possible. Testes reddish-grey coloured and knife-shaped; ovaries reddish-wine coloured and rounder. (The gonads of virgins and some repeat spawners cannot be distinguished macroscopically.) | Late spring and early summer. |
| III. | Developing | Tube-like | Gonads thickened, increased in breadth (5-15 mm) and elongated, but not extending full length of body cavity. Ovaries red to reddish-orange with granular appearance; testes reddish-grey with smooth texture. | Late summer and early fall. |
| IV. | Maturing | Prominent | Gonads extend full length of body cavity. Ovaries reddish-orange to yellow; eggs distinguishable, opaque, variable in size and separable. Testes mostly grey; and will ooze sperm if sliced with a knife. Blood vessels clearly visible in the ovary and testes walls. | Late fall and early winter (slightly earlier in males than females). |

Table 2 (cont'd)

| Stage | State of maturity | Gonad appearance | Description | Timing |
|-------|-------------------|------------------|---|--|
| V. | Mature | Bulging | No blood vessels visible in gonad walls. Ovaries gold-yellow; eggs mostly transparent and uniform in size. Eggs can be exuded from the ovary under pressure and are adhesive on contact. Testes milk-white; sperm will flow under pressure. | Early winter for males, late winter for females. |
| VI. | Ripe | Running | Eggs transparent. Eggs and sperm flow easily without external pressure. | A few days prior to spawning (usually in late winter or early spring). |
| VII. | Spent | Baggy | Gonads slack. Ovaries may contain a few residual eggs. Testes limp and bloodshot. | Early spring for the first few weeks following spawning. |
| VIII. | Recovering | Compressed | Gonads wine-coloured and usually longer and thicker than in Stage II. Blood vessels prominent. (This stage passes into Stage III, but may resemble Stage II in the process.) | Late spring and early summer. |
