Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has registered a new end-use product, containing technical grade thiabendazole, azoxystrobin, fludioxonil and metalaxyl-M, for use in Canada on field, pop and sweet corn. The specific uses approved in Canada are detailed on the label of Maxim Quattro Seed Treatment, Pest Control Products Act Registration Number 29871.

Corresponding maximum residue limits (MRLs) were proposed in the consultation document published on 29 June 2011, Proposed Maximum Residue Limit PMRL2011-17, Thiabendazole. The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs take legal effect in Canada as of the publication date of this document and are in addition to the MRLs already established for thiabendazole.

Established Maximum Residue Limits for Thiabendazole.

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Thiabendazole	2-(4-thiazolyl)benzimidazole	0.01	Field corn, popcorn grain, sweet corn kernels plus cob with husks removed

A complete list of all pesticide MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
