

# RENTAL MARKET REPORT

## Alberta Highlights\*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Spring 2014

Figure 1

Figure 2

\*Urban centres with a population of 10,000 + are included in the survey

## Demand For Rental Units High Across Alberta

- The average apartment vacancy rate in Alberta's urban centres was 1.8 per cent in April 2014 compared to 1.5 per cent in April 2013.
- Apartment vacancies in April 2014 ranged from zero per cent in the Canmore Census Agglomeration (CA) to seven per cent in Wood Buffalo.
- Both the Calgary and Edmonton Census Metropolitan Areas (CMAs) recorded apartment vacancy rates of 1.4 per cent in April 2014 compared to 1.2 per cent in the previous year.
- For units common to both the April 2013 and 2014 surveys, the provincial average rent for a two-bedroom apartment increased 5.5 per cent.

## Alberta Vacancy Rate Remains Low in April 2014

According to the results of Canada Mortgage and Housing Corporation's April 2014 Rental Market Survey<sup>1</sup>, the overall apartment vacancy rate<sup>2</sup> in Alberta's urban centres<sup>3</sup> was 1.8 per cent in April 2014 compared to 1.5 per cent in the previous year. Provincial vacancies across all bedroom types in the April 2014 survey remained low and most were relatively unchanged from the previous year's survey. The vacancy rate by unit type ranged from 1.4 per cent for three-bedroom plus units to 2.0 per cent for bachelor units. For one-bedroom units, vacancies increased from 1.3 per cent in April 2013 to 1.6 per cent in April 2014. Two-bedroom units reported a vacancy rate of 1.9 per cent in April 2014 compared to 1.7 per cent the previous year.

## Strong Net Migration and Job Creation Supporting Rental Demand

The overall apartment vacancy rate in Alberta remained low in the April 2014 survey due to a number of factors, including heightened levels of net migration and strong employment growth. In 2013, net migration in Alberta reached a record high of 102,465 people, the majority of which were international migrants and non-permanent residents who have a high propensity to rent. This helped increase the province's population by a 3.4 per cent, the strongest gain in over 30 years.

Job creation has been a key factor drawing the strong inflow of migrants to Alberta. Within the province, average employment to the end of April 2014 was 3.5 per cent higher than the previous year, translating into 76,300 new jobs. Full-time employment increased by 39,000 jobs to the end of April 2014 compared to the same period last year. Strong employment growth, coupled with heightened net migration, has supported the demand for all types of housing in Alberta including rental units.

The demand for rental units in Alberta has encouraged new rental construction in recent years with the number of purpose-built rental apartment starts consistently increasing year-over-year since 2010. Between the 2013 and 2014 April surveys, the provincial rental apartment universe experienced a net gain of 1,274 units, which helped to offset increased demand. Further additions to the rental market universe will occur in future surveys, as there were over 4,100 rental units under construction in April 2014.

## Same Sample Rent Increases Highest in Grande Prairie

Based on units common to both the 2013 and 2014 April surveys<sup>4</sup>, the average rent for a two-bedroom apartment in Alberta's urban centres increased by 5.5 per cent in April 2014. In Calgary, two-bedroom same sample rents increased five

per cent from April 2013 to April 2014. Meanwhile in Edmonton, same sample rents rose by 6.4 per cent. The continued low vacancies in both CMAs prompted the increase in same sample rents. The remaining urban centres in Alberta all recorded same sample rent increases in April 2014, with the exception of Wood Buffalo where same sample two-bedroom rents declined by 4.9 per cent due to rising vacancies. The highest two-bedroom rent increase occurred in Grande Prairie at 10.8 per cent, where rental demand remained elevated due to a record high in-flow of migrants in 2013 and strong labour market conditions.

## Vacancies Decline in Six Urban Centres

The overall apartment vacancy rate in the Calgary CMA was 1.4 per cent in April 2014 compared to 1.2 per cent in April 2013. Rental demand in Calgary continued to be supported by heightened net migration, which reached a new high of over 45,000 people in 2013. Migration flows, along with employment growth, have been the key drivers of rental demand in Calgary.

In April 2014, the apartment vacancy rate in the Edmonton CMA was also 1.4 per cent compared to 1.2 per cent in April 2013. Like Calgary, rental demand in Edmonton has been supported by strong employment gains and elevated migration. In response to rising demand, apartment rental construction has increased in recent years. Purpose-built rental

<sup>1</sup> Due to seasonal factors, the results of the April 2014 Rental Market Survey are not directly comparable with the results from the October 2013 Rental Market Survey.

<sup>2</sup> The survey is based on privately-initiated rental apartment structures of three or more units.

<sup>3</sup> Urban centres defined as centres with a population of 10,000 or more.

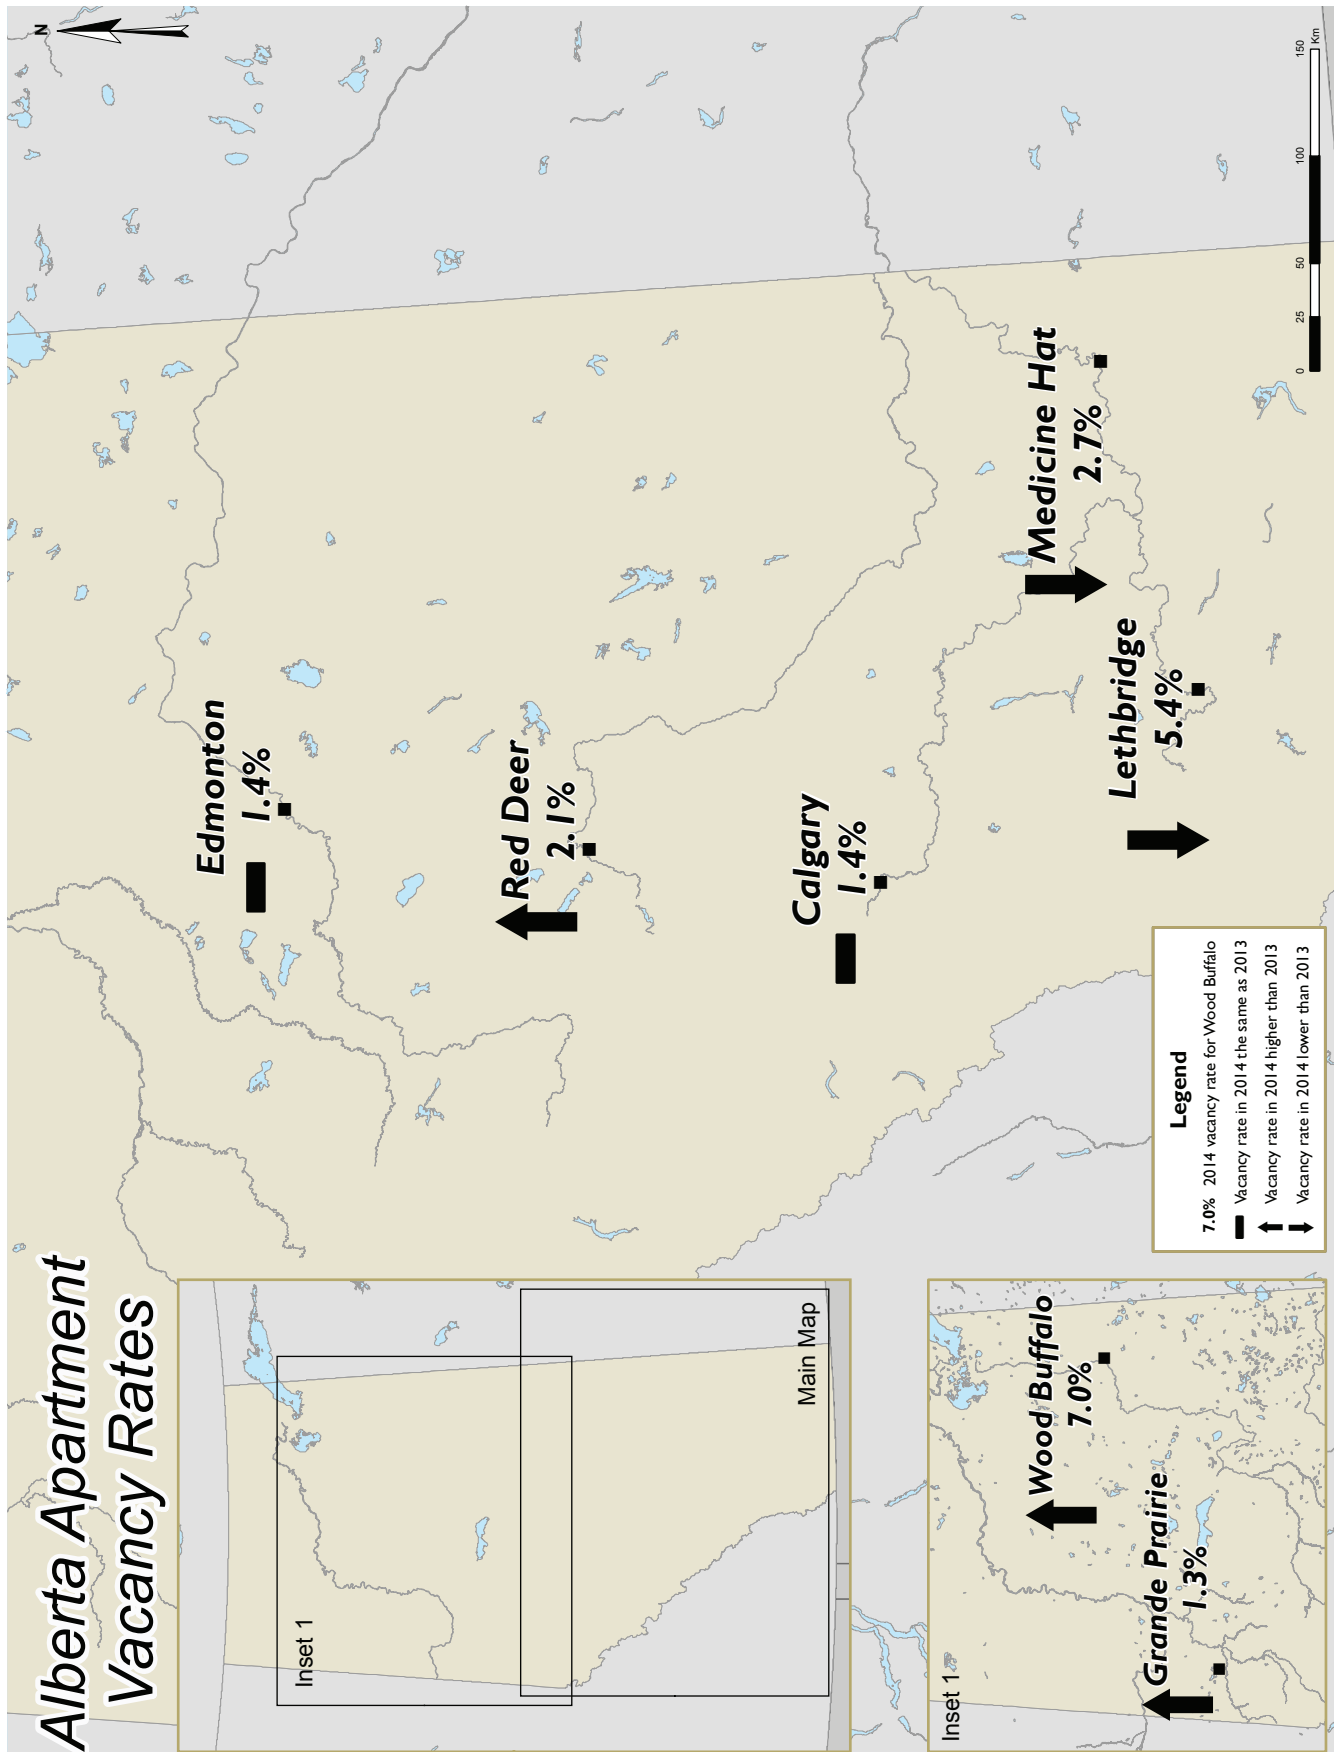

<sup>4</sup> Year-over-year comparisons of average rents can be slightly misleading because rents in newly built structures tend to be higher than in existing buildings. Excluding new structures and focusing on structures existing in both the April 2013 and April 2014 surveys provides a better indication of actual rent increases paid by tenants.

apartment completions in Edmonton reached 2,010 units in 2013, more than double the 892 units in 2012. These additional rental units boosted supply levels in Edmonton, which offset the impact on rental demand from elevated net migration.

The direction of vacancy rates in Alberta's urban centres was mixed as some markets declined while others increased or were relatively unchanged. The vacancy rate in urban centres ranged from zero per cent in the Canmore CA to seven per cent in Wood Buffalo. In Wood Buffalo, alternatives to the traditional rental market are widely available, namely in the secondary rental market and in work camp accommodations for oil sands workers. These options have been competing with the purpose-built rental market, resulting in the increase in vacancies from 2.8 per cent in April 2013 to seven per cent in April 2014.

## **Average Rents Highest in Wood Buffalo**

Including both new and existing structures, the average two-bedroom apartment rent in Alberta was \$1,190 per month in April 2014. In Calgary, the average two-bedroom apartment rent was \$1,267 per month in April 2014, while in Edmonton the average monthly rent was \$1,180. Among urban centres, the lowest average two-bedroom apartment rent was found in Medicine Hat at \$739 per month, while the highest average rent continued to be in Wood Buffalo at \$2,061.

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

<sup>2</sup>Does not include Alberta portion of Lloydminster CA. For Lloydminster CA data, refer to Saskatchewan Highlights report.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Definitions of Census Areas referred to in this publication are as follows:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented in this publication is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
