

HOUSING NOW

Saskatoon CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2014

Highlights

- Total housing starts trended lower over the fourth quarter
- Average absorbed price for a single-detached unit increased from the previous year
- Demand and supply conditions in the resale market remained balanced

Figure 1

* SAAR: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Saskatoon Census Metropolitan Area (CMA) were trending at 3,695 units in December compared to 3,737 in November and 3,670 in October, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

During the fourth quarter of 2013, actual housing starts in the Saskatoon CMA numbered 613 units, down 47 per cent from the 1,163 units started in the same period one year prior. Both the single-detached and multi-family sectors recorded year-over-year declines, with the latter reporting the largest reduction in starts. For all of 2013, housing starts in Saskatoon totalled 2,980 units, down 21 per cent from 3,753 in 2012. While strong job growth supported new home demand, slowing net migration from the peak in 2012 and rising inventory contributed to the decline in housing starts in 2013.

Local builders in Saskatoon poured foundations for 373 single-detached homes in the fourth quarter, 25 per cent fewer than the 500 units started in the same period a year earlier. All three months in the quarter registered year-over-year reductions in starts. For the whole of 2013, single-detached starts in the Saskatoon CMA totalled 1,658 units, down 18 per cent from 2,025 units initiated in 2012. Within the City of Saskatoon boundaries, the Northeast and Nutana (south) areas accounted for the majority of single-detached starts in 2013.

Despite the reduction in single-detached starts, the inventory of complete and unabsorbed homes remained elevated at 262 units in

Figure 2

Source: CMHC

December, up 51 per cent from 173 at the end of 2012. This was a result of fewer absorptions relative to completions. From October to December, there were 447 completions, 21 per cent less than 563 units in the fourth quarter of 2012. By the same comparison, there were 378 single-detached units absorbed, down 25 per cent from 503 in the corresponding period one year prior.

During the fourth quarter, the average absorbed price for a new single-detached home increased 11.8 per cent to \$459,567 from \$411,212 in the fourth quarter of 2012. The pace of the increase was much faster than the gains in contractor selling prices measured by Statistics Canada's New House Price Index (NHPI), which rose by an average 1.4 per cent, year-over-year, from January to November 2013. Much of the gain in the average absorbed price for a single-detached home in Saskatoon can be attributed to a compositional shift in sales towards higher priced properties. During the fourth quarter, the share of homes selling above \$500,000 rose to 30 per cent of total sales,

compared to only 15 per cent in the fourth quarter of 2012. For the whole of 2013, the average absorbed price for a new single-detached unit was \$437,880, up 7.2 per cent from a year earlier.

Saskatoon's multi-family starts, which include semi-detached, row, and apartment units, totalled 240 units in the fourth quarter, down 64 per cent from 663 initiated in the same period one year prior. Of the three months in the quarter, only December recorded a year-over-year gains in starts, as October and November both recorded significant reductions from the previous year. After four quarters, multi-family starts in the Saskatoon CMA numbered 1,322 units, down 23.5 per cent from 1,728 in 2012. Rising inventory over the course of the year contributed to the decline in multi-family construction in 2013. Of the 1,322 multi-family starts in 2013, 185 units or 14 per cent were intended for the rental market, compared to 252 units during the corresponding period of 2012.

Figure 3

Source: CMHC

There were 231 multi-family homes completed for ownership tenure in the fourth quarter, on par with the previous year. By comparison, 230 multi-family homes for ownership tenure were absorbed in the fourth quarter, up 11 per cent from 207 in the same period of 2012. The inventory of complete and unabsorbed multi-family ownership units stood at 261 at the end of December, up 30 per cent from 201 in the corresponding period one year prior. Of this inventory, 161 were apartment units, with the balance shared between semi-detached and row units. With the reduction in starts in 2013, the overall number of multi-family homes under construction in December declined to 1,630 units, down 3.6 per cent from 1,691 in the same month of 2012.

Existing Home Market

Residential MLS® sales in the Saskatoon CMA moved higher in the fourth quarter compared to the same period of 2012. With all three months in the quarter recording year-over-year gains, total sales of existing

homes reached 1,133 units, up 9.9 per cent from 1,031 in the fourth quarter of 2012. After four quarters, a total of 5,543 resale transactions were recorded in Saskatoon in 2013, up 2.7 per cent from the previous year. Strong employment growth and rising wages contributed to the higher level of sales in 2013, as did additional selection for prospective buyers.

Active listings in the fourth quarter averaged 2,408 units, an increase of 20 per cent from 2,002 units in the same period one year prior. With an elevated supply of resale homes, the sales-to-active listings ratio averaged 15.7 per cent in the fourth quarter, down from 17 per cent in the same period a year earlier. As a result, it took an average 54 days during the fourth quarter for a listed home in Saskatoon to sell on the MLS®, up from an average 51 days in the same period of 2012.

Demand and supply conditions remained balanced in the fourth quarter, which led to a modest 1.3 per cent increase in the average MLS® residential price, to \$331,945 from \$327,571 in the same period one year earlier. With active listings rising faster than sales, price growth moderated from the 2.9 per cent year-over-year gain recorded in the third quarter of 2013 and the 6.1 per cent gain for all of 2012. Over the whole of 2013, the average resale price in Saskatoon was \$332,058, up 3.9 per cent from \$319,469 in the previous year.

Source: CREA

Economy at a Glance

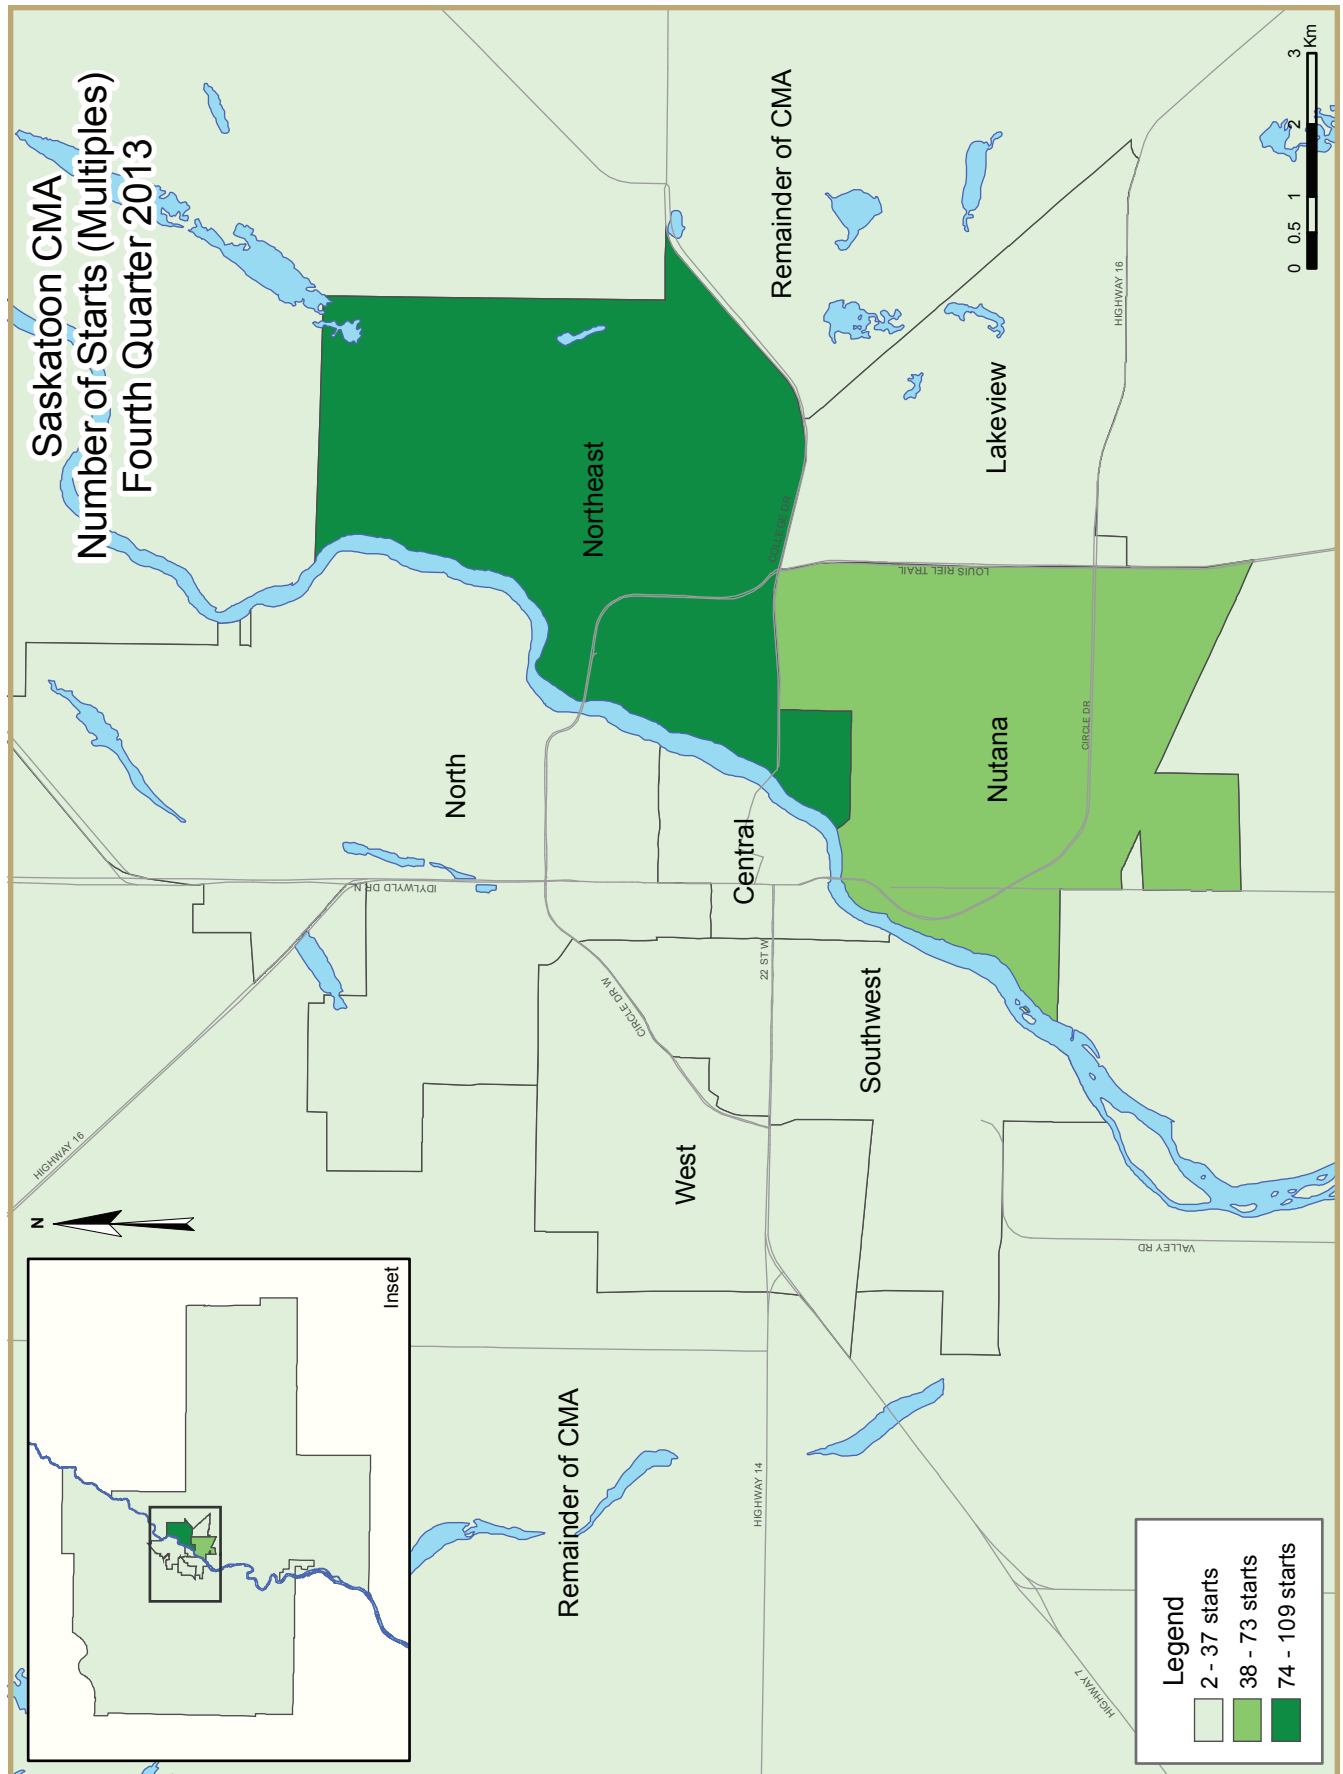

After a 4.7 per cent gain in 2012, average employment in Saskatoon expanded by a record 7.5 per cent in 2013 to 162,900 positions, up from 151,500 in 2012. A total of 11,400 jobs were created, of which 10,400 were full-time positions. With additions to the labour force trailing the pace of employment expansion, Saskatoon's seasonally-adjusted unemployment rate declined modestly to 4.2 per cent in the fourth quarter from 4.4 per cent in the third quarter of 2013. Given Saskatoon's strong full-time job growth and low unemployment rate, average weekly earnings increased 5.2 per cent to \$940 in 2013 from \$893 in the previous year.

With economic prospects improving in other regions within Canada, particularly in Alberta, total net migration to Saskatchewan moderated during the first three quarters of 2013. Saskatchewan attracted a total of 12,281 net migrants through September, down 12 per cent from 13,974 in the corresponding period of 2012. The largest reduction was in net interprovincial migration, which declined 40 per cent to 1,505 people during the first three quarters of 2013, compared to 2,522 in the same period one year earlier. In addition, a net total of 7,372 international migrants arrived in Saskatchewan during the first three quarters of 2013, down 15 per cent from the previous year. By comparison, a net total of 3,404 non-permanent residents entered the province through September, up 23 per cent from 2,761 in the same period in 2012. Despite the overall reduction, net migration remains an important driver of population growth and new household formation, thus supporting housing demand in Saskatchewan.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
