

HOUSING NOW

St John's CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2014

Highlights

- Demand for new homes was lower throughout the St. John's area in the second quarter
- New and existing homes recorded price growth, despite lower activity
- Higher inventory provided homebuyers with a broad selection of housing options

*SAAR: Seasonally Adjusted Annual Rate

The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Residential Construction Activity

Housing starts in St. John's, Census Metropolitan Area (CMA) were trending at 1,131 units in June compared to 1,144 in May according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR)¹ of housing starts. Year-to-date, both single-detached and multi-family starts remain below 2013 levels. Despite stable economic and demographic conditions throughout the second quarter, new home construction activity declined.

New home construction activity was lower throughout the St. John's area during the second quarter, with 377 housing starts compared to 496 in 2013. There were 293 single-detached starts compared to 388 a year ago. There were 84 multiple units started compared to 108 during the second quarter of 2013. The breakdown of multiple unit starts consisted of 76 apartment and other units, four row and four semi-detached dwellings. Of

the 76 apartment and other units, 68 were purpose built rental and eight were condominium. Throughout the St. John's area's six submarkets, total new home construction activity was down 24 per cent compared to the second quarter of 2013. Single-detached starts declined 24 per cent, while multiple-unit starts declined 22 per cent because of lower

condominium construction activity.

St. John's City totalled 132 housing starts during the quarter versus 202 in the second quarter of 2013. There were 86 single-detached starts versus 149 in 2013 and 46 multiple starts compared to 53 in the second quarter of 2013. Conception Bay South (CBS) recorded 65 starts compared to 67 in the second quarter of 2013; all of which were single-detached starts. Mt. Pearl recorded 14 housing starts compared to 32 in 2013's second quarter. Of these starts, there were three multiple starts. Paradise totalled 99 housing starts in the second quarter versus 106 a year ago. Of these 99 starts, 69 were single-detached housing starts versus 65 in 2013; the only submarket to record an increase in single-detached starts during the second quarter. There were 30 multiple starts compared to 41 during the same period in 2013. In Torbay, there were 17 housing starts versus 15 a year ago. In the remainder of the CMA, there were 50 units recorded compared to 74 in the second quarter of 2013.

At the end of the second quarter, the average price of an absorbed single-detached house in the St. John's area was \$419,919, up 2.4 per cent from the same period last year. In St. John's City, the average price of a new single-detached house increased four per cent to \$454,552, which was the highest price for a newly built home in the St. John's area. CBS posted an average new house price of \$352,347 during the second quarter, up 2.2 per cent. Paradise posted the highest price growth, up 5.8 per cent to \$391,633 during the quarter. In Torbay, the average new home price increased 3.3 per cent to \$404,627. In Mount Pearl, the average price for a new single-detached home in the second quarter declined two per cent to \$419,492. The average price of a new single-detached home in the remainder of the CMA submarket also declined, down nine per cent to \$408,795. Price declines can be attributed to a broad mix of new housing types and low sales volume, which does skew prices up or down on a quarterly basis. Total second quarter prices were driven higher in

the St. John's area by buoyant first-time buyer activity, steady sales of high-end custom homes, as well as increased sales in the \$400,000 plus segment.

Throughout the entire St. John's area, approximately 66 per cent of new homes sold for over \$350,000. The fastest growing segment and largest share of the market was the \$400,000 plus segment, which increased to 42 per cent of all new homes sold during the second quarter. Newly built and completed homes are sitting longer on the market in recent months, however, with the reduction in year-to-date new home construction activity, inventory levels have stabilized. Despite a softening in demand, prices have continued to increase so far in 2014.

MLS® Residential Sales Moderated

MLS® residential sales in the St. John's CMA were down 4.4 per cent to 856 units in the second quarter versus 895 units during 2013's second quarter. Economic

fundamentals and favourable borrowing conditions have not increased housing demand over the previous year.

Active listings continued to trend higher during the second quarter, further contributing to buyers' market conditions. With inventory 15 per cent higher, homebuyers had a broad selection of housing options to choose from, whether looking at existing or new homes. For the St. John's area, there were 2,520 new residential listings compared to 2,414 during the same period in 2013. Second quarter active listings averaged 2,509 a month versus 2,190 a year ago. On average, active listings remained on the market for 61 days compared to a similar 64 days during the second quarter of 2013. The average price offered for an existing home was 98 per cent of the list price, unchanged from last year.

The second quarter average MLS® residential sales price increased 3.2 per cent in the St. John's area to \$312,008 compared to \$302,397 during 2013's April to June period. Despite slower housing market conditions, the average MLS® residential sales price continued to be supported by steady demand for average priced existing homes throughout the region.

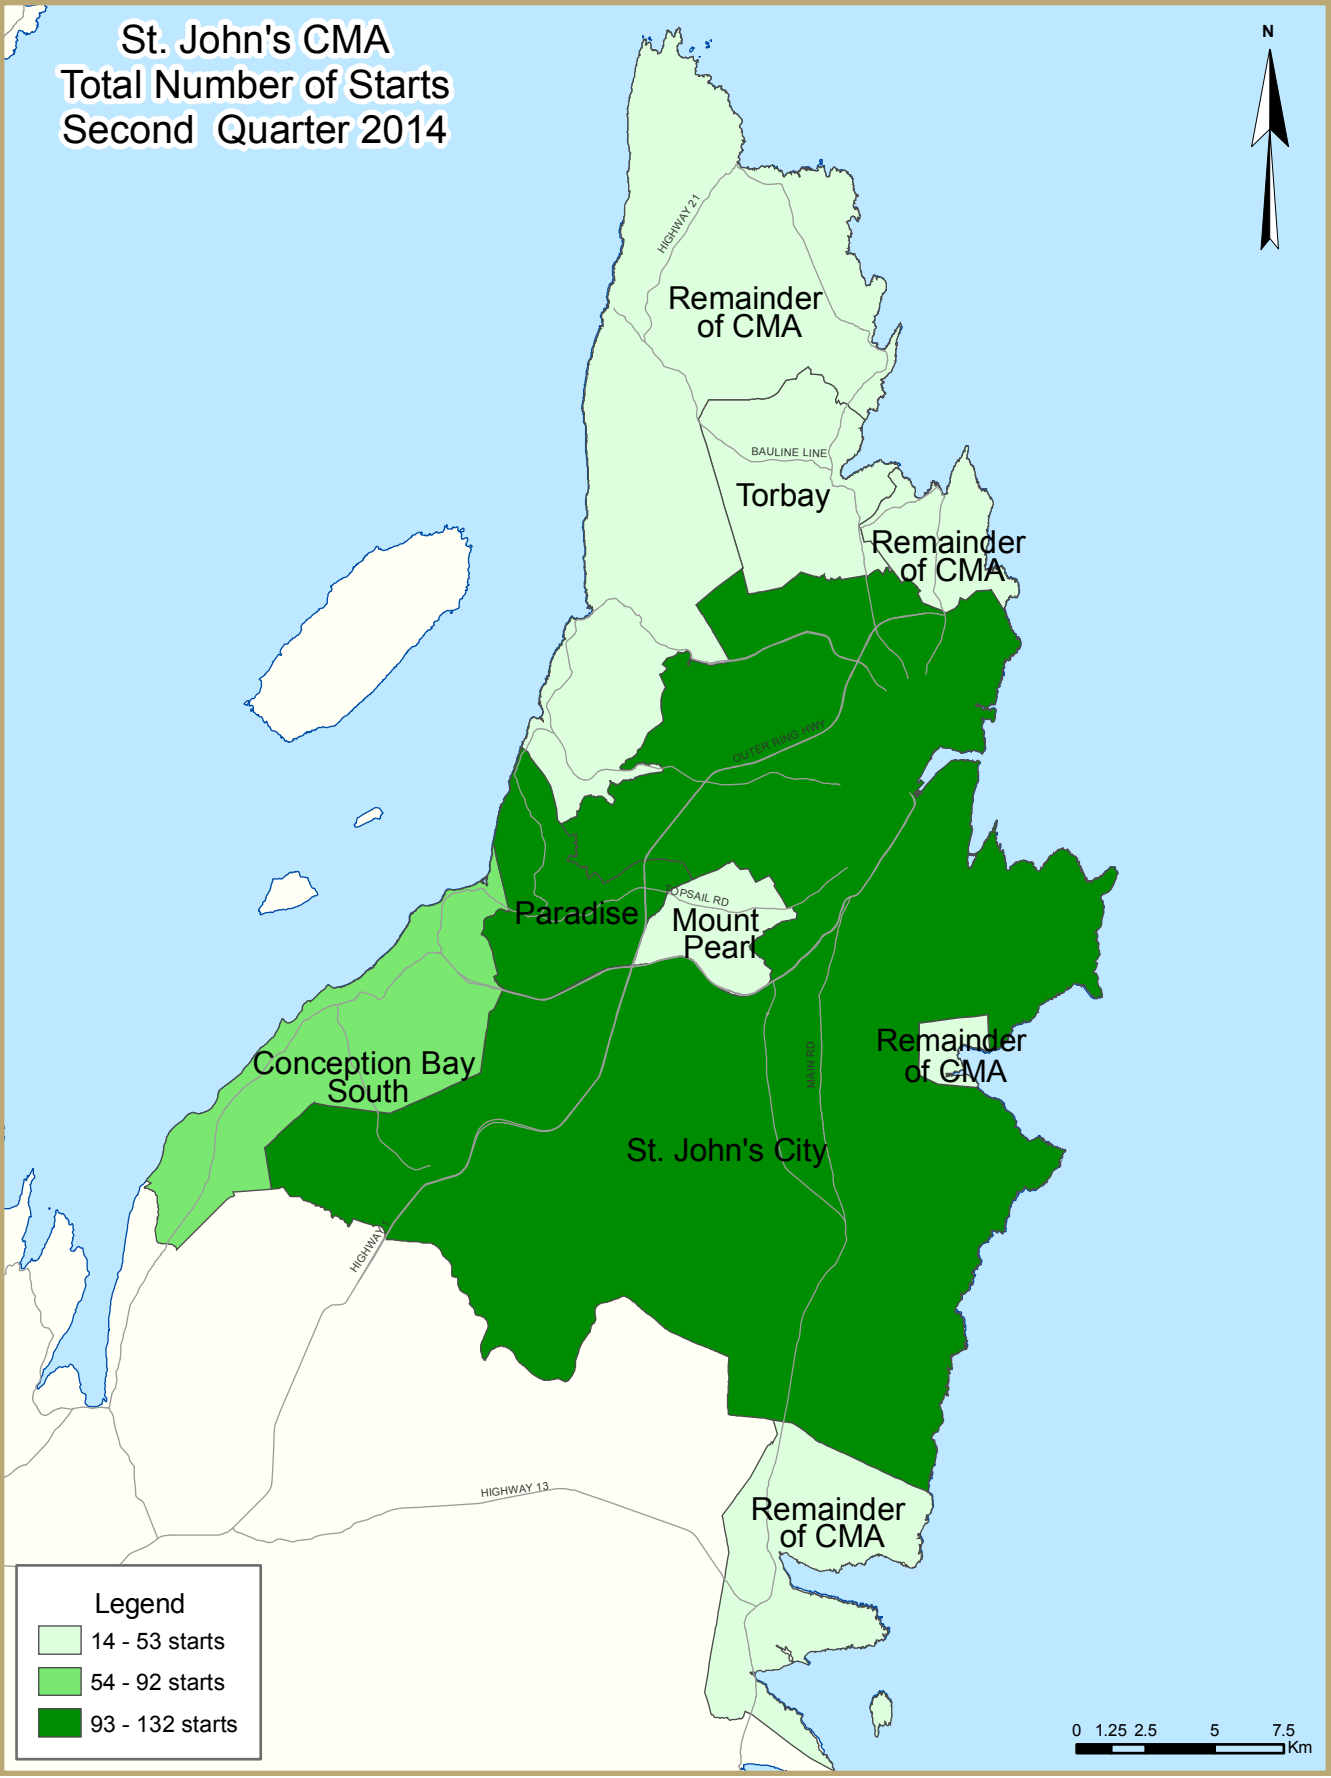

Economy at a Glance:

Earnings growth was strong once again during the second quarter of 2014, with average weekly earnings remaining above the \$1,000 level. Average weekly earnings averaged \$1,019 during the quarter versus \$980 during the second quarter of 2013 and outpaced the inflation rate of 2.4 per cent, as reported by Statistics Canada. These earnings levels are now among the highest in Canada, behind Alberta. Employment is expected to rise by approximately 1.6 per cent this year, with increased activity at Muskrat Falls, Hebron and Hibernia offsetting employment declines associated with the winding down of construction at Vale’s nickel processing facility in Long Harbour. Much of the recent and projected growth in income and employment stems from the province’s booming oil sector and record capital project activity, both of which continue to generate significant economic activity in the St. John’s area.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
