#### HOUSING MARKET INFORMATION

# HOUSING NOW Kelowna CMA

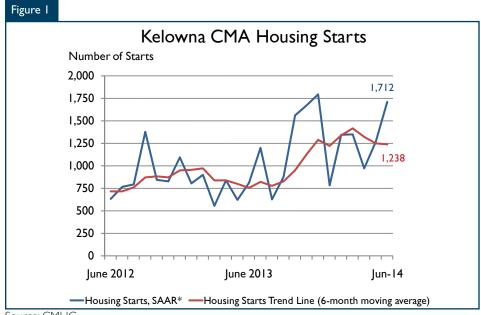

### Date Released: July 2014

# **Highlights**

- The trend measure for Kelowna's housing starts levelled out in June 2014.
- Total actual housing starts increased to 545 homes in the first six months of 2014, up from 333 homes during the same period last year.
- MLS® resale activity between January and June of this year gained momentum over year-earlier levels.

<sup>&</sup>lt;sup>1</sup> Seasonally adjusted annual rates (SAAR) – Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

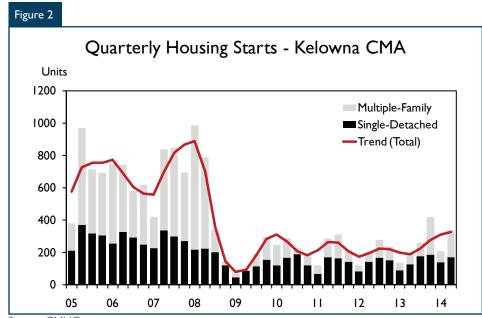

# Kelowna CMA New Housing Market

Housing starts in the Kelowna Census Metropolitan Area (CMA) were trending at 1,238 units in June compared to 1,251 units in May, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

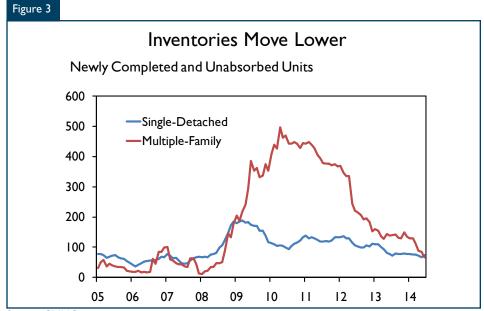

The trend measure for single detached starts mirrored that for total starts. Townhouse and semi-detached home starts trended steadily higher over the past six months, while the apartment starts trend declined at a similar pace. The trend measure for apartment starts was expected to move lower through the first six months of the year, following an uptick in rental and apartment condominium construction during the fourth quarter of 2013.

Year-to-date actual housing starts in the Kelowna area were up compared to the same period in 2013, across all dwelling types. Demand for new homes grew as resale market conditions improved. Relative to a year ago, MLS® sales during the first half of the year tracked higher, homes were selling in less time and there were fewer active listings. Inventories of completed and unabsorbed homes also declined, supporting higher levels of new home construction. Finally, employment in the Kelowna area has been supportive of housing demand, with modest gains in the first half of 2014.

Most of the increase in new home construction activity was in the multiples segment (semi-detached, townhouse, and apartment). Multiples starts doubled during the first six months of this year compared to the same period last year. Apartment

Source: CMHC.

Source: CMHC.

units made up the majority additional multiples starts at 94 units. Semidetached housing starts were also up, recording 72 units in the first half of 2014 compared to 46 units in 2013. Single detached starts between January and June recorded a 43 per cent increase over year-earlier levels.

There was nearly the same number of new homes completed in the Kelowna

CMA between January and June 2014 as one year ago. Year-to-date there was an increase in the number of completed single detached and semi-detached homes compared to year-earlier levels, while townhouse and apartment completions were lower. Absorptions (purchases) have followed a similar trend, with 420 new homes absorbed during the first six months of the year, compared to 422 units last year.

The inventory of unabsorbed homes, homes that have been completed and that are ready for immediate purchase, has declined. Homebuyers have been purchasing unoccupied new homes, particularly multiple family homes, at pace that surpassed the completions of new homes. The number of unabsorbed single family homes has remained constant over the first six months of the year. Overall, the number of unabsorbed homes as a June 2014 was at its lowest June level since 2008.

# Kelowna CMA Resale Housing Market

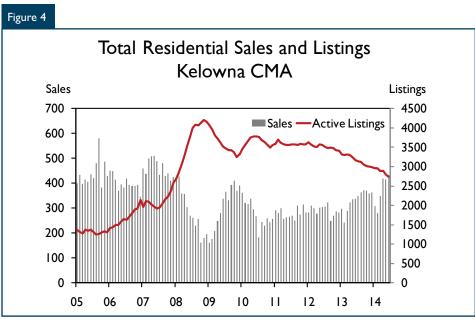

MLS® total residential sales over the first six months of the year were up 29 per cent compared to the same period in 2013. Sales exceeded year-earlier levels by more than 20 per cent throughout the second quarter of the year. While all segments of the residential resale market

recorded gains, sales of townhouses and apartment condominiums grew the most on a percentage basis.

Higher home prices were supported by a declining trend in the number of homes available for sale and the increase in sales. The average MLS® price grew by eight per cent compared to the first six months of last year. The largest price gains were recorded in the single detached segment. The average single detached price was \$531,233, up 12.5 per cent over year earlier levels. The notable price gain was due to the price distribution of sales in 2014 of rather than a more generalized appreciation. During the first quarter of 2014, there were several properties that sold in excess of \$1,000,000, skewing the average price higher.

Recent sales, listing and price trends indicate that Kelowna's MLS® home market has transitioned into a balanced market position from a

buyers' market position. Demand (sales) for resale homes outpaced the growth in supply (new listings) during the first six months of year. As a result, the inventory of active listings declined relative to year-earlier levels. The inventory of listings trended lower throughout the second quarter of 2014 and was down 13 per cent compared to one year earlier by June 2014.

## **SPOTLIGHT: Permits Translating More Quickly into Housing Starts**

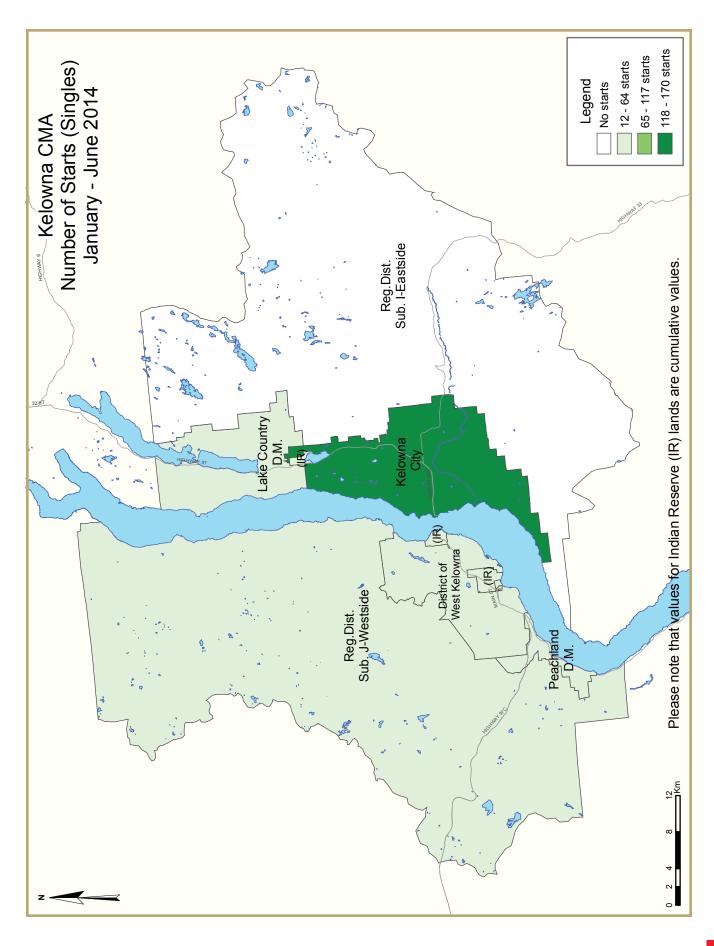

A building permit represents a builder's intention to build a new home. Not all building permits result in housing starts. Most single detached building permits result in a single detached housing start within three months of permitting. It is common for multiple-family building permits to expire or be cancelled, revoked or abandoned due to the longer timeframe between permit issuance and the start of construction. Some issues that face multiple-family projects include a longer lag due to site preparations and changing economic or market conditions that may convince the builder to delay or cancel the project.

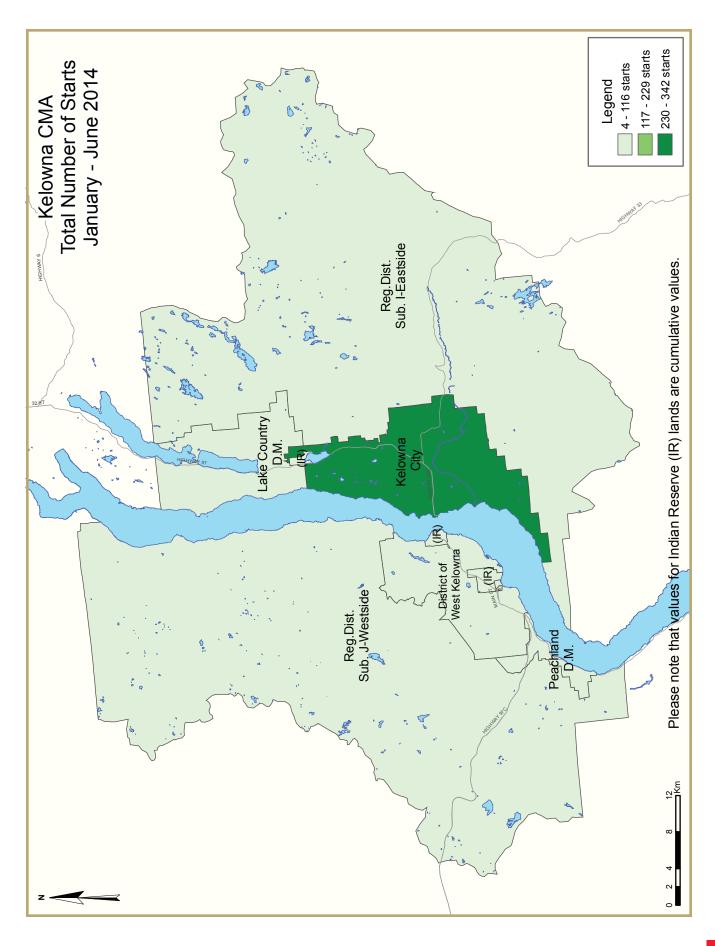

In 2010, the time lag between permit issuance and the start of construction (See Figure 5), for multiple-family projects was nine months. This gap may have been due to the uncertain economic conditions of the time. Over the past few years, the time lag between these two measures has decreased to approximately three months. The shorter time lag reflects an increased demand for new homes, less economic uncertainty, and the trend towards less complex lower density forms of multiple-family housing projects.

<sup>&</sup>quot;NHPI" means New Housing Price Index

<sup>&</sup>quot;CPI" means Consumer Price Index

<sup>&</sup>quot;SA" means Seasonally Adjusted

#### **METHODOLOGY**

#### **Starts & Completions Survey Methodology**

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

#### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

# STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## **DWELLING TYPES:**

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "**Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

#### INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

#### **GEOGRAPHICAL TERMS:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

# CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
