New Home Market: Total Housing Starts will Edge Lower

Stable economic conditions and a growing population in the St. Catharines-Niagara CMA will keep total housing starts in line with their average this decade. Housing starts in the St. Catharines-Niagara CMA are forecast to total 1,120 units in 2014 and 1,232 units in 2015.

The single-detached home starts share should increase in 2014 as a consequence of less choice available in the resale market. Single-detached home starts year-to-date in St. Catharines-Niagara are up in 2014 compared to a year ago. Detached home construction will moderate in the remainder of 2014 as a spike in completed and unabsorbed single-detached homes in the first quarter of 2014 will weigh on single-detached home construction. A dip in the average price of an absorbed single-detached home at the beginning of 2014 suggests that buyers are looking for the more affordable home types such as semi-detached and row homes. Single-detached homes in the more affordable price range will also be in demand.

Despite a slow start to the year home prices will move up. The new home price index will grow at a slightly higher pace in 2014 than last year as a consequence of a greater demand for multi-family homes. While the shares of absorbed single-detached homes will regain some ground throughout the rest of 2014, the demand for multi-family homes will dominate the new home market.

West Lincoln, Lincoln, and Grimsby are expected to post the highest increases in new home prices for 2014 compared to last year. All else being

equal, they have the lowest supply of land for new homes in the Niagara Region. Demand from people moving into the Niagara Region from the Hamilton and Toronto GTA will grow. Firstly, homes in the Niagara Region are more affordable than in Hamilton and Toronto. Secondly, people who commute from the Niagara Region to Hamilton or Toronto have a shorter commute from West Lincoln, Lincoln, and Grimsby than from any other area of the Niagara Region.

Existing Home Market: Sales will Rebound

After edging lower last year, existing home sales in the St. Catharines-Niagara CMA will inch up through 2015 as jobs and earnings improve. In the first quarter of 2014, sales edged down 1.4 per cent annually as affordability continues to deteriorate. But spring and summer sales will increase as more stable employment conditions continue to take hold. People, in the age category of 45 and above, will become more active

since this group is on an upward job trend in St. Catharines-Niagara. Furthermore, many people in this age bracket are migrating from neighbouring CMAs such as Hamilton and Toronto will look to buy homes in the Niagara Region.

The average existing home price in the St. Catharines-Niagara CMA will grow at a moderate pace as the supply of new listings remains tight. The average existing home price rose 6.5 per cent annually in the first quarter of 2014 will moderate to a growth rate of 3 per cent for the year compared to 2013. In 2015, the average resale home price will grow at a slower rate, comparable to the general rate of inflation.

Despite mortgage rates staying near historical lows, affordability of existing homes will deteriorate in the next two years. The increase in the average existing home price will outpace the growth in earnings. Growth in average weekly earnings, which at the beginning of 2014 was running at 4.34 per cent annually will slow. A growing

Figure 2

labour force will put downward pressure on earnings.

As the resale market tightens, current homeowners will face higher home prices, and more will choose to list – alleviating some of the pressures in demand. As the local economy improves in 2015 households will adjust their housing consumption upward.

Rental Market: Private Apartment Vacancy Rate will Fall

At a private apartment vacancy rate of 4.1 per cent in October 2013, renters in St. Catharines-Niagara had considerable choice. Demand for rental coming from new arrivals to Canada and young working people will nudge vacancies down and rents up by the allowable Rent Increase Guideline of 0.8 per cent set for 2014 in Ontario. A slight fall in the 2014 private apartment vacancy rate as compared to 2013 will be accompanied by the growth in the average private two bedroom apartment rent.

On the supply side, a higher number of apartments available for rent in 2014 will put some downward pressure on rents, but it will not offset the demand increases. Newly completed apartments will increase the number of apartments available for rent. Already the completions of apartments for rent in the first quarter of 2014 exceeded the entire amount of rental apartment completions in 2013. With 64 units still under construction in the first

Figure 3

Source: CMHC, Statistics Canada, and CREA.

quarter of 2014, the total number of rental apartment completions for 2014 will still grow.

Economic Trends: Jobs will add to Housing Demand

Emerging stable employment conditions in 2014 will gain traction through the year and gain speed in 2015. More sectors posted gains in the first quarter of 2014 compared to a year ago. Tourism and business related sectors are the job gains leaders in St. Catharines-Niagara. The information, culture and recreation sector, as well as accommodation and food services, will continue to benefit from the lower Canadian dollar. Both the business and finance related fields should continue growing with the St. Catharines-Niagara economy and population. In addition, the business and finance sectors will benefit from a stable home market. Finally,

employment in the healthcare sector is increasing with the aging baby boom population.

Mortgage Rate Outlook

Mortgage rates to see gradual and modest increases by the end of 2015, but will remain low by historical standards

- Consistent with the view of Canadian economic forecasters, CMHC expects interest rates to register gradual and modest increases by the latter part of the 2015 forecast horizon. This will

Mortgage rates		
1 Year	Q1 2014	3.14
	Change from Q1 2013	0.14
	2014 (F)	3.00 - 3.50
	2015 (F)	3.20 - 4.25
5 Year	Q1 2014	5.15
	Change from Q1 2013	-0.06
	2014 (F)	5.00 - 5.50
	2015 (F)	5.25 - 6.00

Source: Bank of Canada, CMHC Forecast

NOTE: Mortgage rate forecast is based on Q1 2014 data

lead to increases in mortgage rates. Despite this, mortgage rates will remain low and will continue to support housing market activity over the forecast horizon.

- According to CMHC's base case scenario for 2014, the average for

the one-year posted mortgage rate is forecast to be within 3.0 per cent to 3.50 per cent, while the average for the five-year posted mortgage rate is anticipated to be within 5.0 per cent to 5.5 per cent. For 2015, the average for the one-year posted mortgage rate is

expected to rise and be in the 3.20 per cent to 4.25 per cent range, while the average for the five-year posted mortgage rate is forecast to be within 5.25 per cent to 6.0 per cent.

Trends at a Glance

Key Factors and Their Effects on Housing Starts

Key Factors and their Effects on Housing Starts	Short term mortgage rates are expected to remain at relatively low levels, which will continue to support housing demand.
Mortgage Rate	Housing demand will be supported by a continuation of mortgage rates near historical lows.
Employment	An increase in employment will support housing demand across all types.
Income	Average weekly earnings will increase in this and next year while inflation will also increase. The net effect will be a negligible decline in real earnings for 2014, and an increase for 2015.
Net Migration	An influx of migrants will support housing demand.
Natural Population Increase	The upward trend in birth rates will contribute to demand for family sized homes.

Forecasts Risks

This outlook is subject to some risks, including the following:

- The number of multiple housing homes currently under construction in some local markets remains relatively high from a historical standpoint. As these units are progressively completed, inventories of newly completed and unabsorbed units may rise in the short to medium term, if they are not entirely absorbed by demand. Should the inventory of new units increase inordinately, builders may delay or reduce the size of some construction projects. This could lead to a sharper-than-expected moderation in starts.
- Canadians are still accumulating debt, albeit at a stable pace.

Nonetheless, levels of household debt remain relatively high. With historically elevated house prices in some urban centres, these factors have made the Canada's economy more vulnerable to some economic shocks. For instance, if a sharp increase in interest rates or a large deterioration in employment were to occur, some of the more heavily indebted households could be forced to liquidate some of their assets, including their home. This could put downward pressure on house prices and, more generally, on housing market activity. Although this risk can arise in the shorter term, its impact would not be immediate on most indebted households because of the prevalence of fixed mortgage terms.

- The economies of China and other emerging-market countries remain vulnerable to tightening credit conditions and political uncertainty. This could affect the global economic recovery and world financial system. In turn, this could negatively impact demand for Canadian exports, contributing to a weakening of the Canadian economy and potentially lower demand for housing.
- A stronger than expected U.S. economic growth could positively impact Canadian economic growth, contributing to a higher level of activity in Canada's housing markets.

Forecast Summary St. Catharines-Niagara CMA Spring 2014							
	2011	2012	2013	2014f	% chg	2015f	% chg

DEFINITIONS AND METHODOLOGY

New Home Market

Historical home starts numbers are collected through CMHC's monthly **Starts and Completions Survey**. Building permits are used to determine construction sites and visits confirm construction stages. A **start** is defined as the beginning of construction on a building, usually when the concrete has been poured for the whole of the structure's footing, or an equivalent stage where a basement will not be part of the structure.

Single-Detached Start:

The start of a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure.

Semi-Detached Start:

The start of each of the dwellings in a building containing two dwellings located side-by-side, adjoining no other structure and separated by a common or party wall extending from ground to roof.

Row (or Townhouse) Start:

Refers to the commencement of construction on a dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

Apartment and other Starts:

Refers to the commencement of construction on all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

Average and Median Single Detached Home Prices:

Are estimated using CMHC's **Market Absorption Survey**, which collects home prices at absorption and measures the rate at which units are sold or rented after they are completed. Dwellings are enumerated each month after a structure is completed until full absorption occurs. The term "**absorbed**" means that a housing unit is no longer on the market as it has been sold or rented.

New Home Price Indexes:

Changes in the New Home Price Indexes are estimated using annual averages of Statistics Canada's monthly values for New Housing Price Indexes (NHPI).

Resale Market

Historical resale market data in the summary tables of the Housing Market Outlook Reports refers to residential transactions through the Multiple Listings Services (MLS®) as reported by The Canadian Real Estate Association (CREA). In Quebec, this data is obtained by the Centris® listing system via the Quebec Federation of Real Estate Boards.

MLS® (Centris® in the province of Quebec) Sales:

Refers to the total number of sales made through the Multiple Listings Services in a particular year.

MLS® (Centris® in the province of Quebec) Average Price:

Refers to the average annual price of residential transactions through the Multiple Listings Services.

Rental Market

Rental Market vacancy rates and two bedroom rents information is from Canada Mortgage and Housing Corporation's (CMHC's) October **Rental Market Survey** (RMS). Conducted on a sample basis in all urban areas with populations of 10,000 and more, the RMS targets privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey obtains information from owners, managers, or building superintendents through a combination of telephone interviews and site visits.

Vacancy Rate:

The vacancy rate refers to the average vacancy rate of all apartment bedroom types. A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Two Bedroom Rent:

The rent refers to the average of the actual amount tenants pay for two bedroom apartment units. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water.

Economic Overview

Labour Force variables include the Annual Employment Level, Employment Growth, Unemployment Rate. Source: Statistics Canada's Labour Force Survey.

Net Migration:

Sum of net interprovincial (between provinces), net intra-provincial (within provinces), net international (immigration less emigration), returning Canadians and temporary (non-permanent) residents as provided to the CANSIM database by Statistics Canada's Demography Division. Sources of inter-provincial and intra-provincial migration data include a comparison of addresses from individual income tax returns for two consecutive years from Canada Revenue Agency (CRA) taxation records. The migration estimates are modelled, with the tax file results weighted to represent the whole population.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
