Figure 2

Source: QFREB by the Centris® system

Overview

In Quebec, moderate economic and employment growth will hold back demand for existing and new homes in 2014 and 2015. In addition, relatively high inventories of new and existing dwellings will constrain the number of housing starts. The expected levels of demand and supply will translate into marginal price growth in most markets.

In the next two years, economic growth will stem from consumer spending and recovering private investment. Meanwhile, public expenditures will remain limited by balanced budget objectives and net exports will gain some momentum as US demand strengthens. Thus, GDP growth of 1.7 per cent and 2.0 per cent is forecasted in 2014 and 2015, respectively. As private investment increases gradually, the impact on labour markets will be felt more substantially in 2015. Thus, employment will grow at a rate of 0.9 per cent in 2014 and 1.6 per cent in 2015. The unemployment rate will come in at 7.5 per cent this year and at 7.0 per cent in 2015.

On the demographic front, total net interprovincial migration will continue to be hindered by more attractive labour markets in other provinces. However net international migration will remain sustained. Total net migration is expected to attain 40,000 persons this year and 44,000 persons in 2015. These levels will thus have a positive impact on demand in Quebec's rental markets. During this period, moderating formation of younger households will cool first-time buying, and population aging will continue to prompt some older households to downsize.

In Detail

Single Starts: Again this year, demand for new single-detached homes will be influenced by moderate employment growth, the continued easing of the resale market and the trend toward apartment living (condominium and rental). Starts in this category will decline to the 12,100 level in 2014. As the resale market begins to tighten, demand for new single-detached homes will increase, and translate into 13,300 starts next year.

Multiple Unit Starts:

After coming back down last year, to a level that is more in line with the demographic trends, multiple unit housing starts will record similar levels this year and next. This market segment will continue to be supported by its relative lower price in comparison to new single-detached homes. Further growth will be held back by relatively high levels of supply of new and resale housing, which will limit the need for additional building. Starts of multiple unit dwellings will be at 25,500 units in 2014 and 25,400 in 2015.

Resales:

Sales of existing houses recorded by Centris® I4 should remain stable this year, in line with moderate employment growth. Following a certain decline in the last two quarters, resales will recover and reach the 71,600 level this year. Like the rest of the country, buying conditions will be somewhat impeded by the eventual slightly higher interest rates. Nonetheless, 73,700 Centris® resales will be achieved next year as more robust labour markets push up demand.

Prices:

With lower demand and higher supply, prices of resale homes will post marginal growth during the forecast horizon. A gradual return to more balanced market conditions will keep price growth between the one and two per cent mark this year and next. As a result, the average price recorded by Centris® will reach \$266,300 this year and \$270,000 in 2015.

Mortgage rates to see gradual and modest increases by the end of 2015, but will remain low by historical standards

Consistent with the view of Canadian economic forecasters, CMHC expects interest rates to register gradual and modest increases by the latter part of the 2015 forecast horizon. This will lead to increases in mortgage rates. Despite this, mortgage rates will remain low and will continue to support housing market activity over the forecast horizon.

According to CMHC's base case scenario for 2014, the average for the one-year posted mortgage rate is forecast to be within 3.0 per cent to 3.50 per cent, while the average for the five-year posted mortgage rate is anticipated to be within 5.0 per cent to 5.5 per cent. For 2015, the average for the one-year posted mortgage rate is expected to rise and be in the 3.20 per cent to 4.25 per cent range, while the average for the five-year posted mortgage rate is forecast to be within 5.25 per cent to 6.0 per cent.

Some of the data in this table, such as the Centris® sales and average price for Q4, became available after the cut-off date of January 22th 2013. As a result, this data was not considered for the forecast.

All data in this table, except the Centris® average price, is seasonally adjusted at annual rates. The Centris® average price data is actual.

As is the case for the other provinces, the historical average price for the province of Quebec is calculated by dividing the total dollar sales volume by the number of transactions.
