^{**}The trend is a six-month moving average of the monthly SAAR.

¹The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

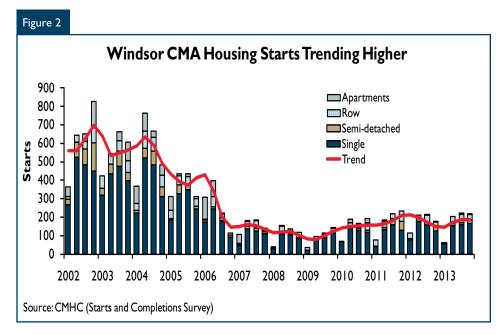

Housing starts in the Windsor Census Metropolitan Area (CMA) trended higher, at 812 units in December 2013 compared to 740 in September. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The trend increased due to an increase in single-detached and townhouse starts.

A total of 219 units were started in the fourth quarter of 2013, up 24 per cent from the 177 units in the fourth quarter of 2012. The increase in single-detached and townhouse construction boosted the starts. Semi-detached construction moved lower, while apartment starts were unchanged. Fourth quarter starts were pushed higher by increased construction in the City of Windsor and towns of Amherstburg and Tecumseh.

For 2013 as a whole, housing starts were down just one per cent to 708 units, from 717 units in 2012. While single-detached and apartment construction remained virtually unchanged, townhouse starts increased. However, a decline in semi-detached construction offset this increase. The high vacancy rate in the Windsor CMA has limited the construction of apartments. Housing starts in 2013 increased in the City of Windsor and the towns of Amherstburg and Tecumseh, but declined in the towns of LaSalle and Lakeshore.

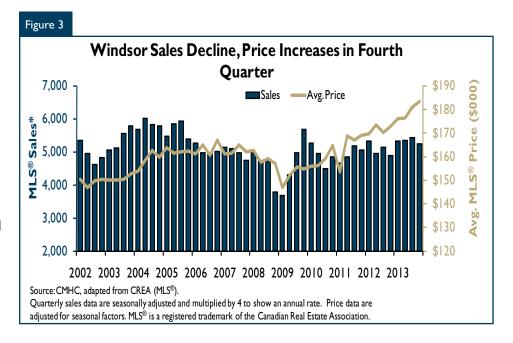

Stable employment, immigration, and the relative affordability of housing in the Windsor CMA supported demand for housing. Employment increases in 2013 were supported by gains in the services sector.

An expanding local economy and a slowly growing population supported

the increased construction of single-detached homes in 2012 and 2013. Three quarters of all housing starts were single-detached homes in 2013. Unlike many other CMAs, there is adequate land available for ground-orientated residential construction.

The average price of a new singledetached home decreased by ten per cent in the fourth quarter of 2013 compared to the same period last year. Lower average prices for the newly completed and sold homes in the City of Windsor and the towns of Amherstburg and Tecumseh pulled the average price lower. However, on an annual basis, the average price of a new single-detached home in 2013 was virtually unchanged from 2012. Prices in the towns of LaSalle, Tecumseh and Lakeshore increased, while prices in the City of Windsor and Town of Amherstburg declined.

Resale Market

Residential sales through the Windsor-Essex Association of Realtors® on a seasonally adjusted basis were slightly lower in the fourth quarter of 2013 compared to the third quarter. They were trending higher for most of the first part of the year. Fourth quarter sales figures increased from the same quarter last year. Annual 2013 sales increased five per cent from 2012. Sales were driven by a combination of demographic and economic factors, including the relative affordability of homes in the CMA, a growing population and a stable job market. Many households, who delayed their home purchases in 2012 due to

tightened mortgage rules, were able to meet qualifying criteria and enter the home ownership market in 2013.

New listings were lower in the fourth quarter of 2013 compared to the same quarter of 2012. However, new listings increased slightly from 2012. This was the first year-over-year increase in new listings since 2006. Improved market conditions and rising prices led to a steady stream of new listings. Homeowners listed their homes for sale to take advantage of the rising equity in their homes and move to a home more suited to their needs. With sales increasing at a faster pace than new listings, the sales-to-new listings ratio (SNLR) moved

slightly higher in 2013. However, the resale market remained balanced.

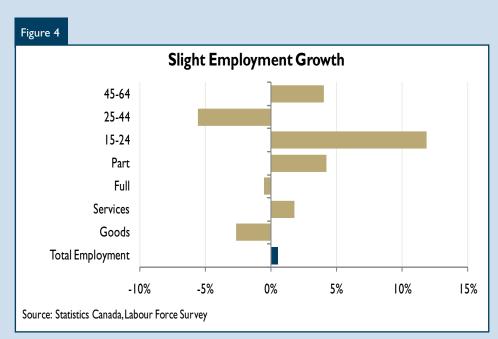

Prices continued to trend higher in the fourth quarter. The average price of a resale home in 2013 increased by 4.5 per cent compared to 2012. Prices have been steadily increasing since the first quarter of 2009. Windsor has the most affordable prices for resale homes among Ontario CMAs. Close to three quarters of all homes sold in 2013 in Windsor-Essex were priced under \$220,000. However, a 25 per cent increase in the sales of homes priced above \$300,000 pushed the average resale price higher in 2013.

Windsor Employment Stable in 2013

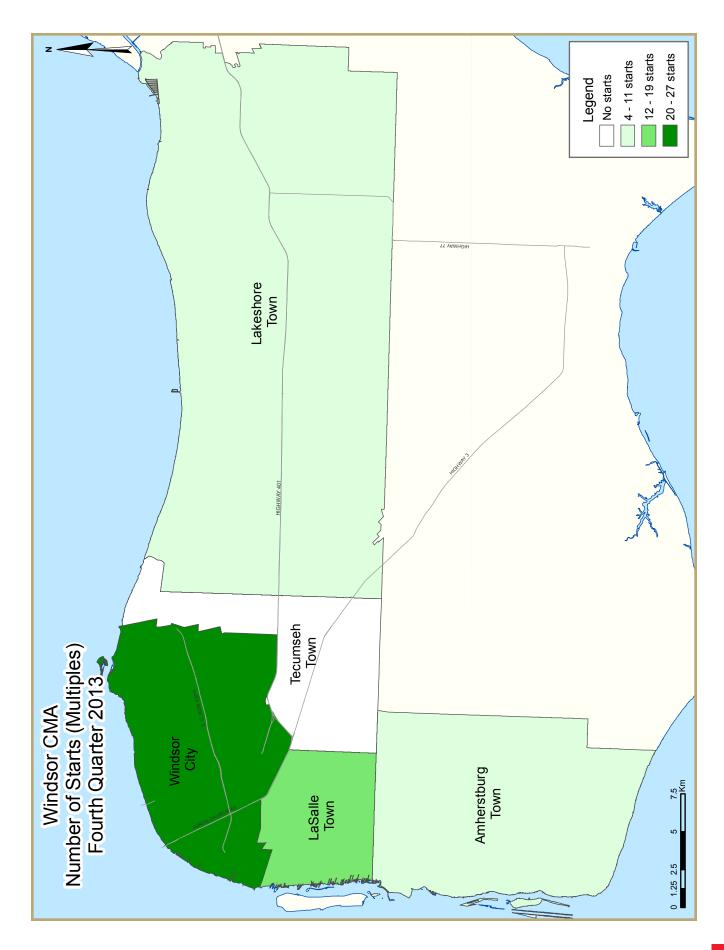

Jobs are important to housing demand. Data released from the Statistics Canada, Labour Force Survey provides an insight into the local Windsor economy. Total employment in the Windsor CMA remained stable in 2013. Employment grew slower at 0.5 per cent in 2013 compared to 2.2 per cent in 2012. Employment growth was different by sector and age and was predominately in the lower wage segments. The Windsor goods-producing sector saw job losses in 2013 due to a decline in both manufacturing and construction employment, while services sector jobs were higher led by increases in education,

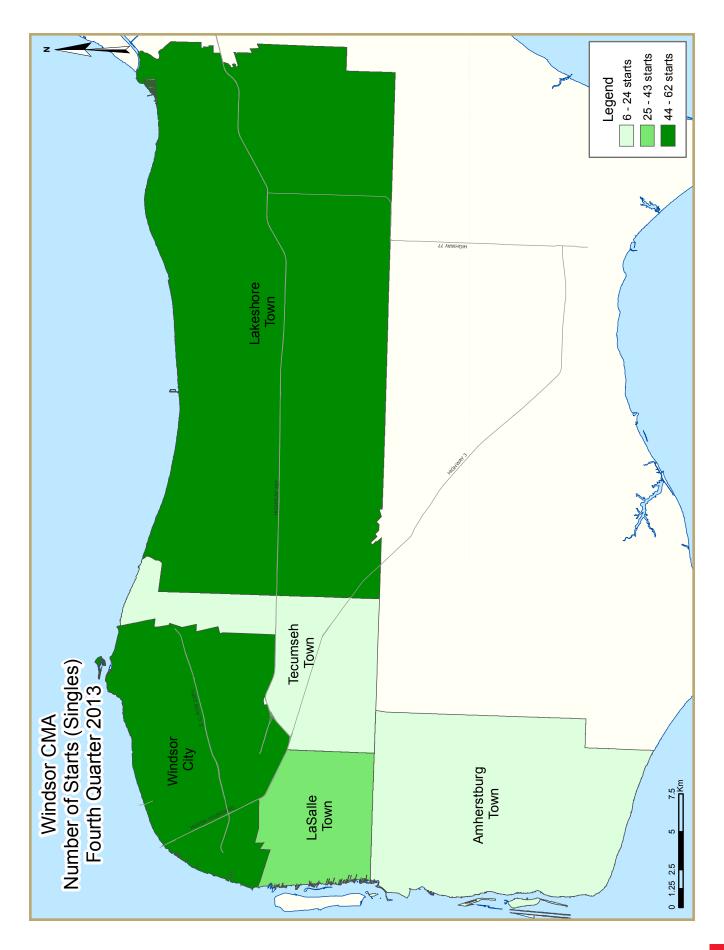

finance, insurance and real estate, health and retail trade. Employment growth was in part-time jobs, while full-time jobs slipped marginally.

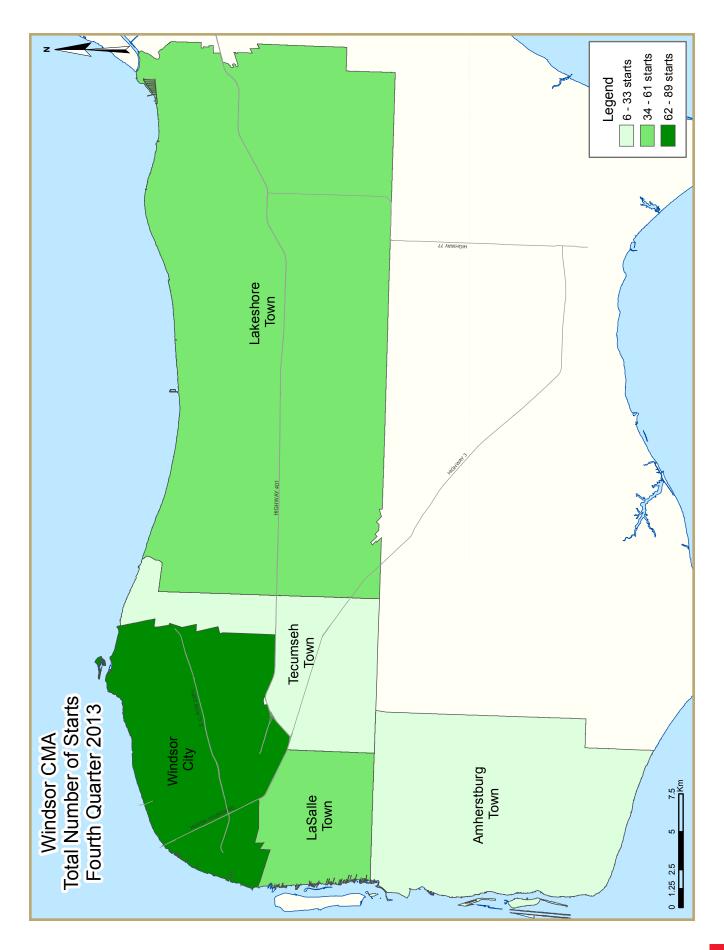

Employment grew in the 15-24 and 45-64 age groups, supporting rental demand and move-up buyer demand. However, significant job losses were recorded in the

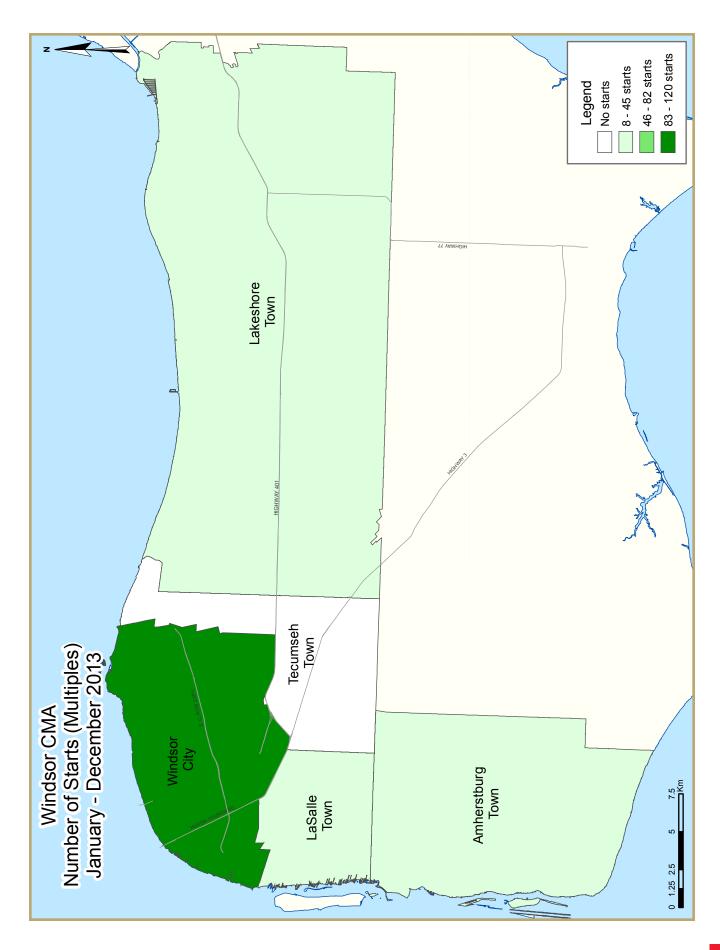

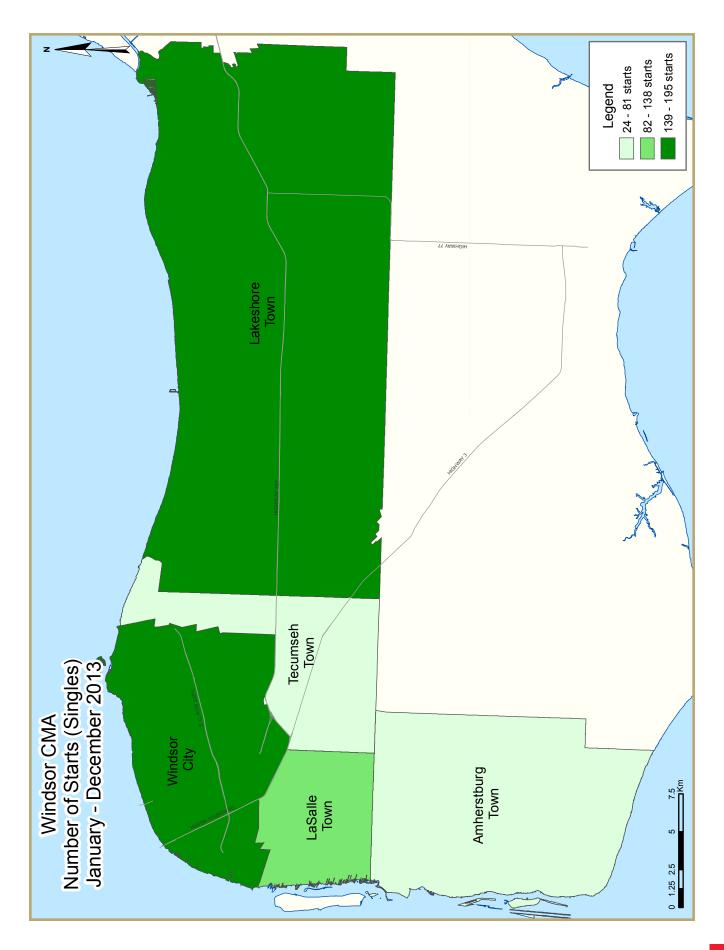

25-44 age group, a very important group for household formation. The labour force for this age group also declined as movement to Western Canada continued. Overall, Windsor's unemployment rate fell to 8.9 per cent in 2013 from 9.8 per cent in 2012. The drop in the unemployment rate was due to the increase in employment coupled with a slight decline in the labour force.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
