

West Nile virus

National Surveillance Report

English Edition

August 26 to September 1, 2012

(Report Week 35)

Canada

Humans:

During surveillance week 35, ending on September 1, 2012, 19 clinical cases [Ontario (8), Quebec (8), and Manitoba (3)] of West Nile virus have been reported to Public Health Agency of Canada (PHAC). As of week 35, a total of 162 clinical cases have been reported to PHAC. Of them, 34 (21%) were classified as West Nile virus Neurological Syndrome, 82 (51%) as West Nile virus Non-Neurological Syndrome and 46 (28%) as unclassified. To date, 15 asymptomatic infections have been reported [Quebec (7), Ontario (7), and Saskatchewan (1)] to PHAC.

Mosquitoes:

To date a total of 545 positive mosquito pools have been reported in Canada: 409 in Ontario [Central East (213), Central West (86), Eastern (52), North East (2), South West (52), First Nations Community (5)]; 111 in Manitoba [Interlake-Eastern (12), Southern (45), Western (35), Winnipeg (19)]; six (6) in Saskatchewan [Sun Country (3), and Saskatoon (1), Five Hills (1), Cypress (1)] and 19 in Quebec [Laval (3), Bois-des-Filion (3), Gatineau (1), Sainte-Anne-des-Plaines (3), Terrebonne (5), Boisbriand (1), Rosemere (1), and Trois-Rivieres (2)].

Note: Quebec public health authorities do not have mosquito surveillance since 2006, however, entomological surveillance is conducted in some municipalities of the province.

Dead Birds:

A total of 58 dead birds have been tested for West Nile virus by the Canadian Cooperative Wildlife Health Centre (CCWHC) in Canada. Of them, 32 were positive for West Nile virus, [17/28 in Ontario, 14/20 in Quebec and 1/4 in Saskatchewan].

Domestic Animals:

Six (6) horses with WNV infection have been reported by the Canadian Food Inspection Agency (CFIA): Quebec (1); Ontario (1); Manitoba (1); and Saskatchewan (3).

National WNV surveillance data and maps can be found on the PHAC website at: <http://www.phac-aspc.gc.ca/wnv-vwn/index.html>

United States

As of September 4, 2012 there have been 1,993 human cases of West Nile virus infection reported to the Centers for Disease Control and Prevention in the United States, of which 1,069 (54%) were neuroinvasive and 924 (46%) were non-neuroinvasive. 87 deaths reported. 335 West Nile virus presumptive viremic blood donors have also been reported.

Europe and Neighbouring countries

As of August 30, 2012 there have been 339 confirmed human cases of West Nile virus infection reported in Europe and Neighbouring countries [Greece (106), Italy (1), Romania (8), Israel (15), Occupied Palestinian territory (2), Russian Federation (202), Serbia (4), Tunisia (1)].

Total		34	82	46	162	8	15

¹ Total clinical cases is the sum of both probable and confirmed: West Nile virus neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the province/territory. These cases are included in either the total clinical cases or West Nile virus asymptomatic infections.

³ Satisfies West Nile virus diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test (NAT), by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary West Nile virus specific NAT following any positive donor screen test result.
