

HOUSING NOW

Regina CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2015

Highlights

- Total housing starts trended lower in the fourth quarter of 2014
- Elevated new home inventory and weaker job growth prompted a reduction in the pace of starts
- Buyer's market conditions in 2014 resulted in modest resale price growth

Figure 1

* SAAR: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Regina Census Metropolitan Area (CMA) were trending at 2,489 units in December compared to 2,562 in November and 2,921 in October. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Regina's actual housing starts numbered 524 units in the fourth quarter of 2014, down 29 per cent compared to 739 in the same quarter a year earlier. While both the single-detached and multi-family sectors reported declines in starts, the reduction was most pronounced in single-detached construction.

All three months in the quarter recorded year-over-year declines as a record inventory of complete and unabsorbed units, combined with moderating economic fundamentals, prompted local builders to scale back production. After four quarters, total housing starts in Regina reached 2,223 units in 2014, a decrease of 29 per cent from 3,122 in 2013, but still above the five-year average of 2,037 units.

Local builders poured foundations for 154 single-detached homes in Regina during the fourth quarter, 48 per cent fewer than the 294 units started in the same quarter of 2013. All three months in the quarter posted significant declines in starts from the previous year. For all of 2014, there were 707 single-detached homes started in Regina, down 43 per cent from 1,246 units in 2013.

A total of 726 single-detached units were under construction in Regina at the end of the fourth quarter of 2014, a decrease of 39 per cent from the previous year and the lowest number since the second quarter of 2011. Between September and December

Figure 2

Source: CMHC

2014, builders applied finishing touches to 290 single-detached homes, 17 per cent fewer than the 349 units completed in same quarter a year earlier. Similarly, with a total 273 units, there were 17 per cent fewer absorptions of single-detached homes in Regina during the fourth quarter compared to the same period in 2013. With more units completed than absorbed, the inventory of unsold single-detached homes stood at 160 units at the end of December 2014, 57 per cent more than the 102 in December 2013. The gain in inventory was led by a rising number of spec units, which more than doubled from the previous year and represented 75 per cent of Regina's total single-detached inventory.

Regina's average absorbed price for a single-detached home was \$536,277 in the fourth quarter of 2014, up 6.5 per cent from \$503,542 in the same period one year prior. On a year-to-date basis, the average absorbed price reached \$514,165 in December 2014, an increase of 4.7 per cent from \$491,292 in December 2013. The year-over-year gain in the average

absorbed price can be attributed to a compositional shift towards the higher end of the market. By comparison, Regina's contractor selling prices measured by Statistics Canada's New House Price Index (NHPI) increased by an average 1.2 per cent year-over-year to the end of November 2014, significantly lower than in the past several years, and reflective of the comparatively lower levels of starts in 2014.

Multi-family starts, which include semi-detached units, rows, and apartments, totalled 370 units in the fourth quarter, down 17 per cent from 445 in the same period of 2013. Multi-family production for all dwelling types was down during the quarter compared to one year prior. After four quarters, multi-family starts in Regina numbered 1,516 units, a decrease of 19 per cent from 2013.

Local builders applied finishing touches to 216 multi-family units intended for rental tenure in the fourth quarter, down from 248 units a year earlier. In the ownership market, builders completed 207 multi-family

Figure 3

Source: CMHC

homes, up 4.5 per cent from 198 in the same quarter of 2013. Over the same period, a total of 164 multi-family units were absorbed in the ownership market, down from 187 in the previous-year period. With absorptions lagging completions, the inventory of complete and unabsorbed multi-family units in the ownership market stood at 316 in December, more than five-fold the 62 units in December 2013.

Existing Home Market

Fourth quarter residential MLS® sales in Regina were virtually unchanged at 766 transactions compared to 765 in the fourth quarter of 2013. Of the three months in the quarter, October and December recorded year-over-year gains in sales, while sales in November declined over the previous year. For all of 2014, total residential sales in Regina were little changed at 3,731 units, compared to 3,692 in 2013. Slower job growth and competition from Regina's new home market prevented a stronger gain in resale transactions in 2014.

On the supply side, active listings averaged 1,842 units during the fourth quarter, up 22 per cent from 1,507 in the fourth quarter of 2013. The increase was supported by an increase in new listings, which rose 26 per cent year-over-year to 1,498 units during the fourth quarter. Move-up buying and a rising number of newly constructed homes being listed on the

MLS® have contributed to the overall increase in supply. With supply rising faster than demand, the sales-to-active listings ratio declined to 14 per cent in the fourth quarter from 17 per cent in the same quarter the previous year. Similarly, the average days on market measure rose to 50 from 43 under the same comparison.

Buyer's market conditions since mid 2014 kept resale price growth modest in Regina, with the average MLS® price reaching \$313,164 during the fourth quarter, up two per cent from \$306,911 in the same period of 2013. On a year-to-date basis, the average resale price in Regina was \$314,899 in December 2014, an increase of less than one per cent from \$312,355 in December 2013. On a seasonally-adjusted basis, the trend in the average resale price in Regina declined in the fourth quarter from the third quarter of 2014.

Economy at a Glance

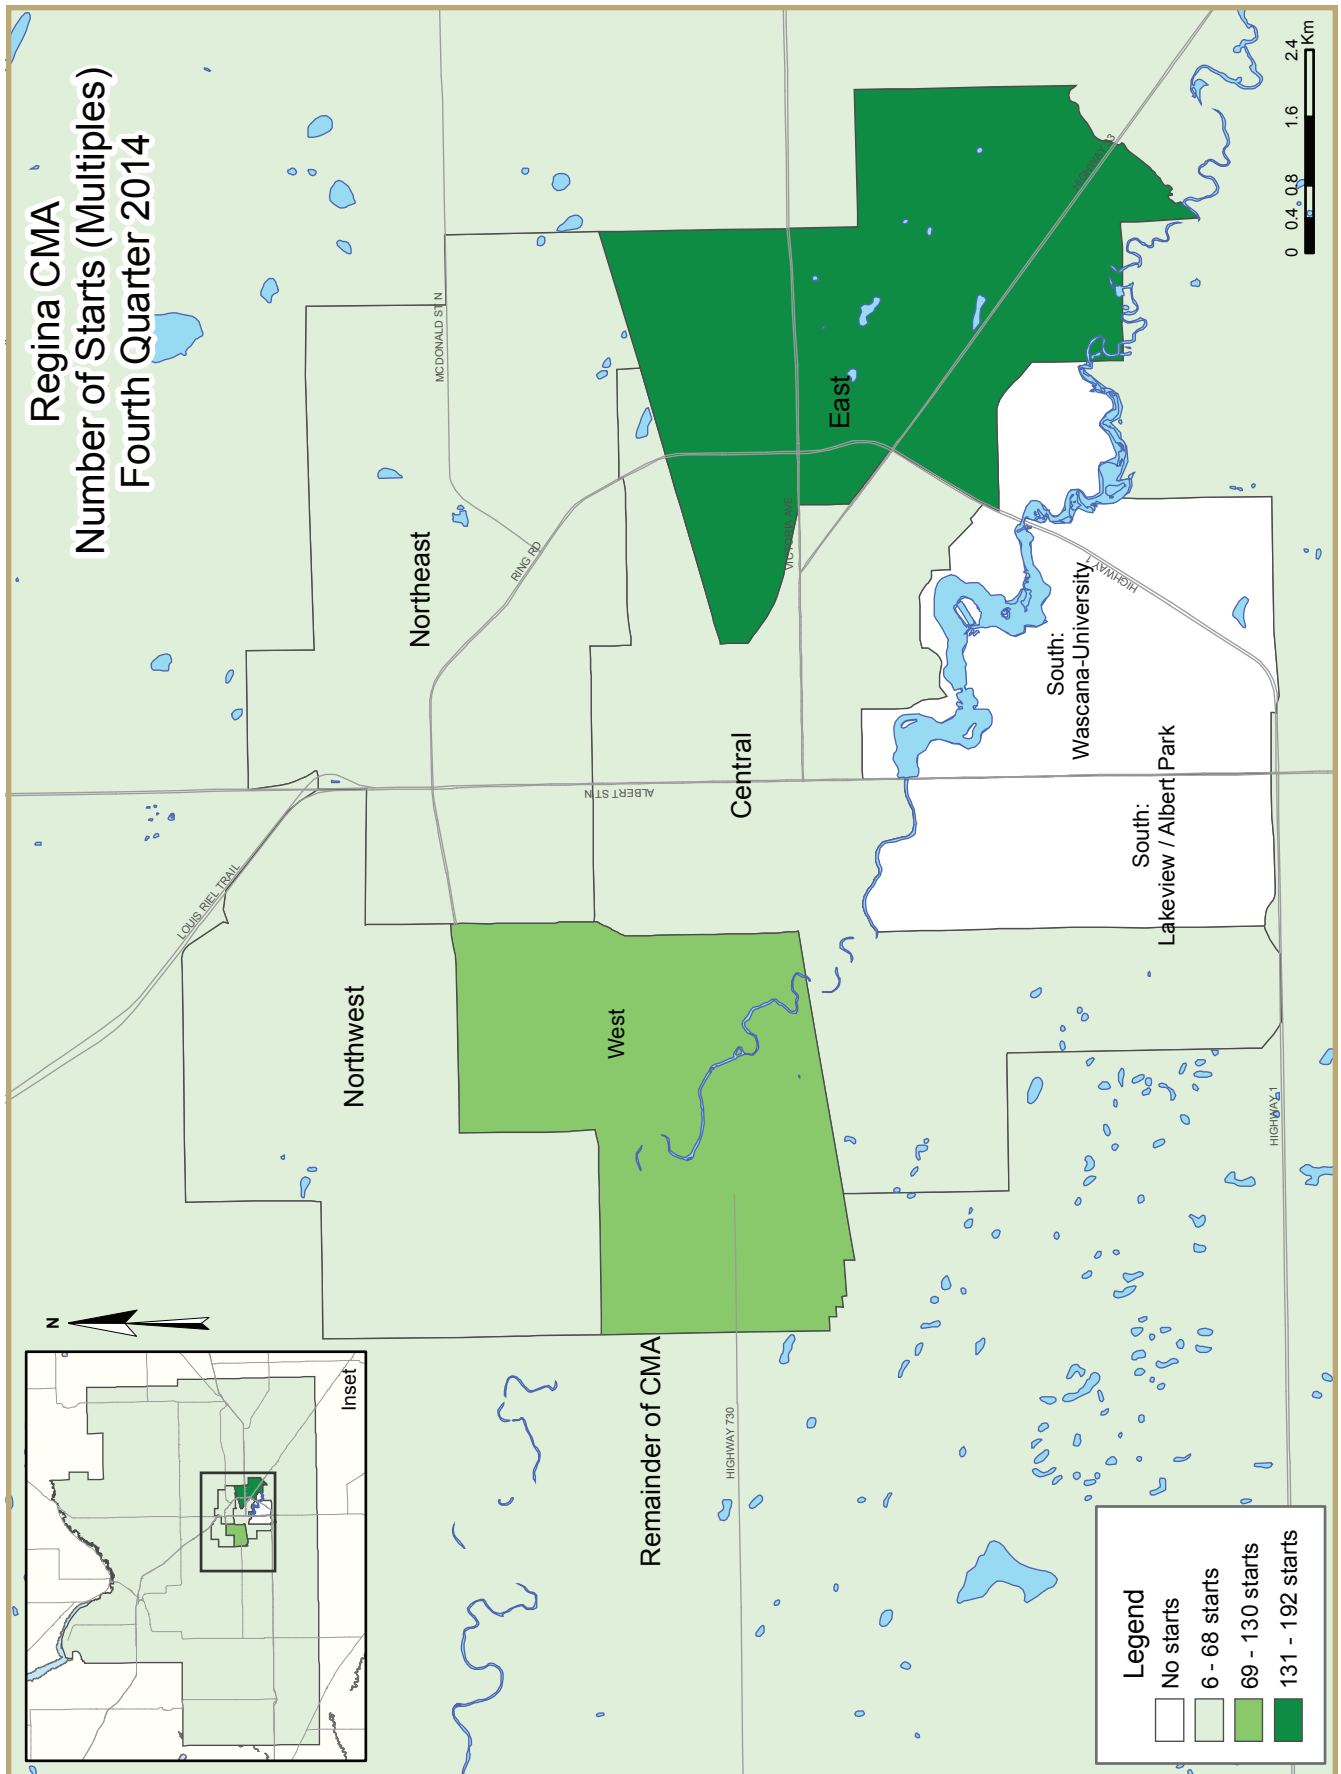

After four consecutive years of strong gains, Regina's average employment growth expanded less than one per cent to 134,600 positions in 2014, compared to 133,600 during the 12 months of 2013. This resulted in an increase of 1,000 new jobs from January through December, compared to 7,500 jobs created in the same period a year earlier. Unlike previous years, Regina's job growth in 2014 was dominated by part-time employment, while full-time positions were lost over the same period. With additions to the labour force keeping pace with the expansion in the number of people employed, Regina's seasonally-adjusted unemployment rate averaged 3.4 per cent in the fourth quarter, unchanged from the third quarter of 2014. As a result of tight labour market conditions, average weekly earnings rose 5.4 per cent to \$1,000 in the fourth quarter from \$949 in the same period of 2013.

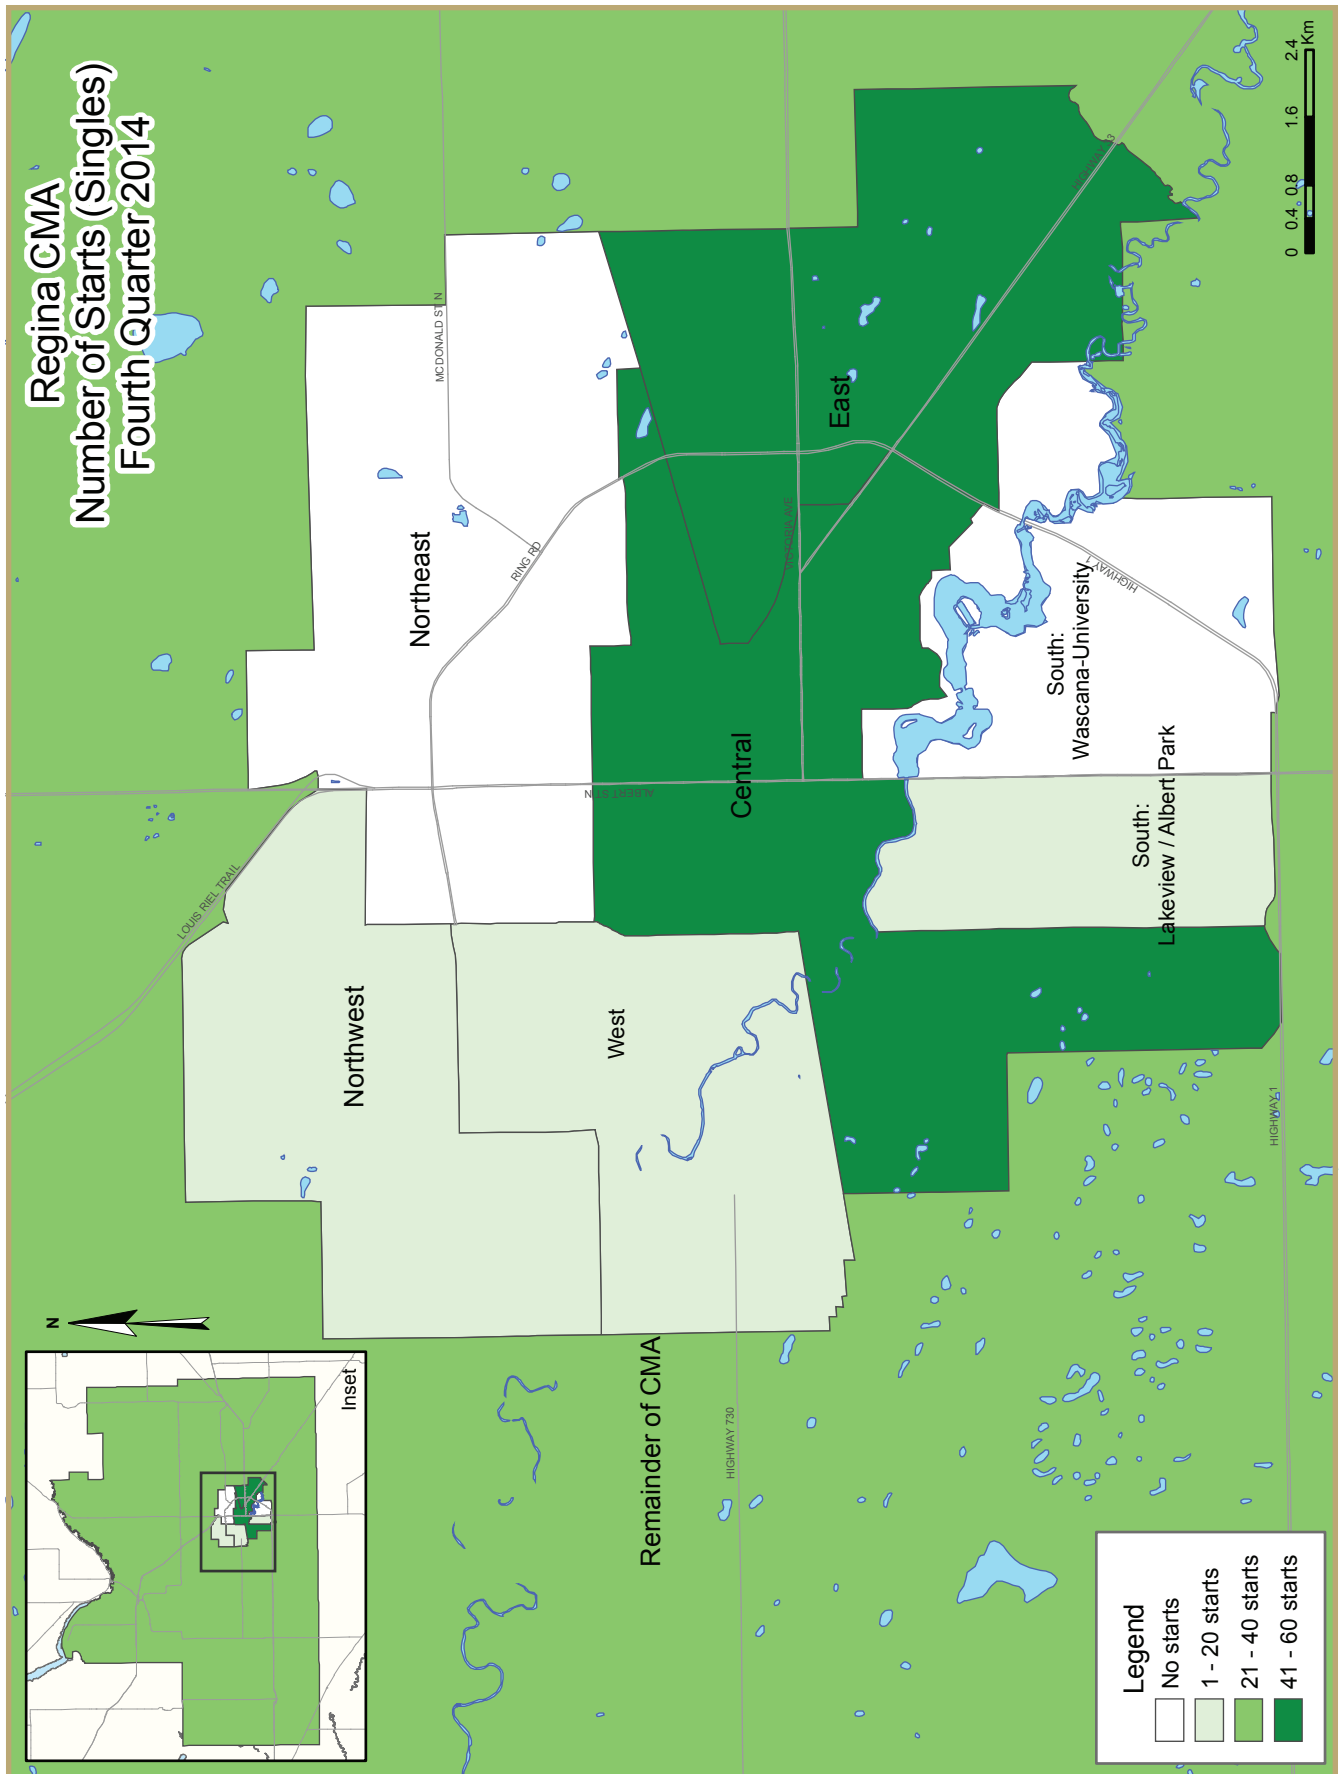

Improving economic conditions in other provinces within Canada continued to impact migratory flows to Saskatchewan, with total net migration to the province moderating nearly seven per cent year-over-year to 10,052 people during the first three quarters of 2014. Notwithstanding, international migrants continued to represent the largest portion of new arrivals, numbering 8,886 persons through September, an increase of 23 per cent from the same period of 2013. By comparison, gains from other provinces in Canada from January through September numbered 357 migrants, down more than 46 per cent from the corresponding period one year prior. The largest year-over-year reduction was among non-permanent residents such as temporary workers and students whose number fell to 809 people through September from 2,920 during the first nine months of 2013. Despite the overall reduction, net migration to Saskatchewan remains a positive contributor to new household formation and housing demand in the province.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
