

HOUSING NOW

Saint John, Moncton CMAs and Fredericton CA

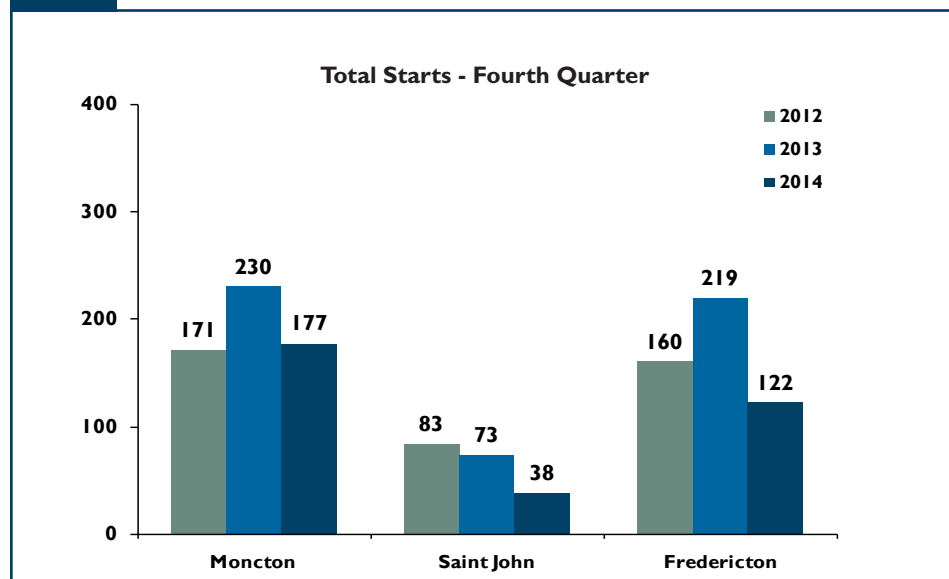

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2015

Highlights

- Residential housing starts declined significantly in all three of the province's large urban centres during the fourth quarter
- For the year, total housing starts maintained the downward trend from 2013
- Fourth quarter MLS® sales posted mixed results among the province's large urban centres, while price growth was muted

New Home Market

Combined, total fourth quarter housing starts in the province's large urban centres were down 35.4 per cent in 2014. This substantial decline was due, for the most part, to a year-over-year decrease in rental market construction activity in each centre. One of the most significant year-over-year changes in 2014 was observed in the Fredericton CA, where apartment starts were down to 42 units from 2013's fourth quarter total of 111 starts. The reduction in construction activity observed during the final three months of the year extended the steep downward trend that saw annual apartment starts in Fredericton decline 65 per cent to 98 units.

For 2014, local developers grew increasingly conservative and slowed the pace of construction in the rental market, most likely due to the recent build-up in supply. Between 2009 and 2013, apartment starts in Fredericton averaged nearly 250 units annually and the annual average number of completed units added to the local rental universe remained above 200 units. In comparison, over the previous

two decades annual apartment starts and completions averaged 145 and 144 units, respectively. In addition, at the end of 2013, a total of 209 additional units remained under construction. Excess inventory in the local rental market, as confirmed by the historically high vacancy rate of 5.8 per cent recorded in the fall of 2014, essentially muted apartment starts throughout the year.

In the Moncton CMA, unlike neighbouring Fredericton, developers remained relatively undeterred by the high vacancy rate, which stood at 8.7 per cent the fall of 2014. Despite a 71.8 per cent decline in apartment starts during the fourth quarter, annual apartment starts, with 349 units on record, were only down 11.9 per cent as several large projects were started during the summer months. This was the fifth consecutive year with over 300 apartment starts in Greater Moncton.

The number of rental completions in Greater Moncton totalled 282 units for the year, down significantly from the 583 units recorded in 2013. The difference was due to the timing of

the starts, as over 250 units were started during the third quarter of 2014. As a result, these units were not completed before the end of the year, which resulted in 406 units under construction in December.

In the Saint John CMA, rental market construction activity in 2014 continued to trend at a much lower level than what was observed in both Moncton and Fredericton. This was due, in part, to the absence of significant population and employment growth. Relatively weak demand for rental units has resulted in a persistently high vacancy rate, limiting the expansion of the local rental universe. During the fourth quarter, no apartment starts were recorded, with an annual total of 79 units.

In the semi-detached market, starts remained relatively stable in Greater Moncton, which is the province's largest market for these units. Nevertheless, a fourth quarter, year-over-year decline in starts led to a 2.8 per cent decline to 212 units for the year. The resilience of the semi-detached market in Greater Moncton, which developed rapidly due to its popularity with first-time homeowners, is mostly attributed to a substantial price point advantage over new single-detached homes. Last year, the average price for a new single-detached home was nearly twice as high as the average price of a new semi-detached unit. In both Fredericton and Saint John, the semi-detached market accounts for a small share of the new home market, with year-to-date starts in both markets limited to 20 units in 2014.

Single-detached starts posted mixed results in New Brunswick's three large provincial urban centres during the fourth quarter compared to the same period in 2013. Respective increases of 34.2 and 5.7 per cent in Moncton

and Saint John were offset by a 19.1 per cent decline in Fredericton. For the year, single-starts were mostly unchanged in Moncton, with fewer starts recorded in both Fredericton and Saint John. The average absorbed price for new single-detached units continued to rise in 2014, ranging between a high of \$362,267 in Saint John to a low of \$264,942 in Fredericton. In Greater Moncton, the average price essentially split the range at \$318,943. In comparison, the average resale price in all three markets was below \$180,000 in 2014. The widening gap between the cost of purchasing a home and building a new home has, at least partially, muted demand for new single-detached homes. This, combined with weakness in employment gains and rising out-migration, resulted in fewer single starts throughout the year.

Existing Home Market

Compared to the new home market, activity in the existing home market was less volatile in 2014. Nevertheless, results were mixed during the fourth quarter. In Moncton and Saint John, MLS® sales were up by 1.1 and 3.9 per cent, respectively. Conversely, in Fredericton, fourth quarter MLS® sales trended lower, posting a 5.2 per cent year-over-year decline.

Throughout the year, the resale market in each centre experienced the effects of the province's sluggish economic performance and a corresponding rise in out-migration. While demand for existing homes in each centre was impacted, overall results differed considerably. The Greater Moncton area, which has continuously led the province in terms of net migration gains, proved to be the most resilient existing homes market in 2014. In fact, Moncton posted the only year-over-year

increase in MLS® sales for 2014, with a total of 2,222 units sold. Annual MLS® sales for the year were up 1.9 per cent.

In the provincial capital, net migration gains, while remaining positive, trailed the levels observed in Moncton by a significant margin. This resulted in fewer transactions in the resale market in order to meet existing demand. As a result, MLS® sales were down 6.9 per cent to 1,768 units. In addition, from a consumer standpoint, favourable conditions and ample options in the local rental market led some to opt for a rental unit rather than purchase an existing home. As a result, the rising trend in the local vacancy rate was reversed, which was unexpected given the recent pace of expansion of the local rental universe.

In Saint John, MLS® sales for 2014 were down 1.4 per cent to 1,499 units, extending a downward trend dating back to 2008. Over this period, sales in the region have declined 4.7 per cent annually. The ongoing reduction in resale market activity has stemmed mostly from the lack of sustained positive economic and population growth.

In the province's three large urban centres, price growth was relatively muted in 2014. The lack of upward pressure on resale prices was strongly influenced by historically high levels of inventory. In all three centres, active listings during the summer months set new record highs, rising much higher than long-term historical averages. Throughout 2014, potential homebuyers benefitted from ample choice and time, further reinforcing buyer's market conditions.

In both Fredericton and Moncton, the average MLS® sale price for the year increased 1.9 and 1.6 per cent, respectively. Among the province's

three large urban centres, Fredericton had the highest average MLS® sale price at \$179,657. The Greater Moncton area posted the lowest average MLS® sale price at \$164,307. The combination of fewer homes sold under \$150,000, for the most part due to fewer first time home buyers as a growing number of young people have left the area, and increased sales in the upper price ranges led to the modest rise in each centre's average MLS® sale price.

In Saint John, the average MLS® sale price was down 2.1 per cent in 2014 to \$172,790, with year-over-year declines observed in each of the region's main sub-markets. The Rothesay/Quispamsis area remained the province's highest priced sub-market at \$251,400, despite a 1.2 per cent year-over-year decline.

Spotlight Topic – Housing in New Brunswick and the Price of Oil

According to Statistics Canada, average weekly earnings in New Brunswick were the third lowest among Canada's provinces and territories in 2013. Furthermore, since 2009, the annual increase in average weekly earnings in New Brunswick was the second weakest in Canada. When combined with sluggish economic growth and stagnant employment levels, dim prospects for increased household income have led a rising number of New Brunswickers to opt for employment in Alberta, while maintaining their residence in their native province.

In recent years, this phenomenon has resulted in thousands of people commuting from New Brunswick to Western Canada, enticed by ample employment opportunities in Alberta's oil and gas industry that offered much higher income potential. These New Brunswickers, however, have chosen to spend much of their income at home, supporting the local economy and generating activity in the housing market.

With the recent sharp decline in the price of oil, many of those commuting to Western Canada face the prospect of potential job losses if global oil prices remain low for an extended period of time and oil producers are forced to scale back their activities. Should this occur, these individuals will

be faced with a challenging job market in New Brunswick or potential unemployment that could persist, depending on the levels of uncertainty in the energy sector. This would have a negative impact on the province's economic performance. The impact on the local housing market would also be significant, in terms of construction, sales and renovations. Given recent downward trends in new home construction, a prolonged reduction in activity in Alberta's energy sector would likely intensify and extend the current slump in New Brunswick's housing market.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
