

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2015

Highlights

- Fewer housing starts.
- Stable MLS[®] sales.
- Relatively unchanged average resale price.

^{*}SAAR¹: Seasonally Adjusted Annual Rate. **The trend is a six-month moving average of the monthly SAAR.

¹ All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR) — that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels. The trend is the six month moving average of the monthly SAAR for housing starts.

Housing market intelligence you can count on

New Home Market

Housing starts in the London Census Metropolitan Area (CMA) were trending down at 2,192 units in December compared to 2,508 in November, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The trend moved down largely due to fewer apartment starts over the final six months of 2014.

The slowdown in apartment starts was not an indication of weaker housing demand, as more Londoners were employed, average wages grew and mortgage rates remained stable over the past two quarters. Very few apartment projects with greater than 50 units start each year in London. If those projects are not spread evenly throughout the year large swings in the data will be produced that are not necessarily a reflection of demand for apartments. 2014 was such an example as no apartment projects with greater than 50 units occurred in the fourth quarter. Nearly all the smaller apartment projects that started in the fourth quarter were in the Southern region of the City of London.

Row home starts increased as a tight market for comparably priced resale properties has led to a relatively small inventory of completed and unsold new units. Resale homes priced from \$250,000 to \$350,000 continued to spend less time on the market, with conditions for this segment closing in on seller's market territory. Builders increased row home starts due to greater traffic at sales offices and to have more ready-to-move-in units available to compete with the resale market.

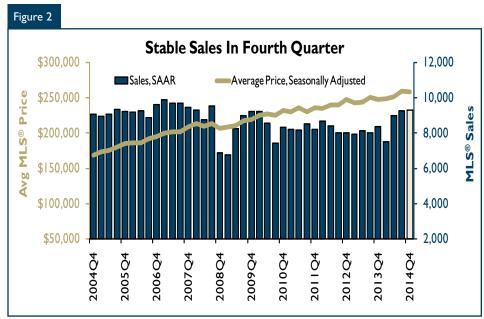

Single-detached starts were down in the fourth quarter, falling to the lowest level of the year. The months of supply² of completed and unsold new detached homes remained above its ten year average, causing builders to decrease starts. Builder's inventories failed to decrease due to competition from the ample number of listings of similarly priced homes in the resale market. The average days on market of resale homes in the \$350,000 to \$500,000 price range trended down slightly but still reflected a well supplied market.

Total annual starts were lower than in 2013 due to fewer apartment starts

in both the condominium and rental markets. The number of units under construction was high, particularly of rental apartments. Rental apartment starts decreased as builders waited for some larger projects under construction to be completed and leased up. Row home starts increased, with more starts occurring in the southern and western areas of the City of London. Single-detached starts finished the year similar to 2013, with a larger concentration of those starts being in the northeast region of the City of London.

Existing Home Market

The resale market did not tighten, as both the number of sales and new listings were relatively unchanged from the previous quarter. A 53 per cent sales to new listings ratio meant the market was balanced. However,

Source: CMHC, adapted from CREA (MLS®)

Note: Sales are seasonally adjusted and are multiplied by 4 to show an annual rate. Prices are seasonally adjusted. MLS[®] is a registered trademark of the Canadian Real Estate Association (CREA).

² Months of supply are the time it would take to bring the inventory of completed and unsold new homes down to zero, based on average monthly sales. The number of completed and unsold new homes in December was divided by the 12 month moving average of absorbed (sales) new homes.

in contrast to the third quarter, the average price of an existing home did not appreciate as a greater share of fourth quarter sales was of lower priced homes.

Existing home sales were similar to the third quarter, when the number of transactions was bolstered by purchases which had been delayed by the late winter. The pent-up demand produced an unusually high number of sales in July. Greater full-time job growth in the second half, higher average wages and a decrease in the five year posted mortgage rate earlier in the year kept demand stable in the final three months of 2014.

Sales increased more than new listings on an annual basis, producing

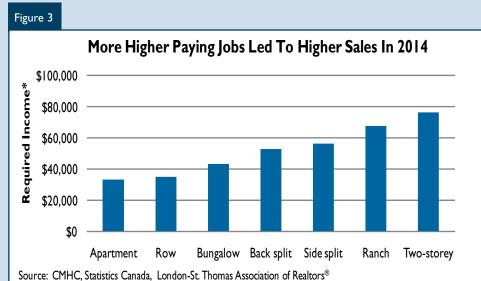

greater price growth than in 2013. This year marked the highest existing home sales through the London-St. Thomas Association of Realtors[®] since 2007. Sales increased in all three sub-markets of the City of London (North, South, East), as well as in St. Thomas. Transactions in the South and Eastern areas of the City of London had been decreasing every year since 2007. The revival in sales in those less expensive areas suggests that resale homes in the northern region of the City of London, with average price now exceeding \$300,000, became too pricey for a greater number of buyers.

The average number of days on market for the most prevalent dwelling types (two-storey, ranch, bungalow, back split, side split, row home, condominium apartment) in London CMA was the same or lower than in 2013, with the exception of condominium apartments. The tightest markets were for the most affordable single-detached options such as the average bungalow (\$198,000), back split (\$242,000) and side split (\$258,000). The latter two averaged less than 40 days on market, which has been synonymous with a seller's market in London. Competition was strongest for back split and side split homes due to a lack of new supply of this dwelling type and prices that are affordable to the average Londoner.

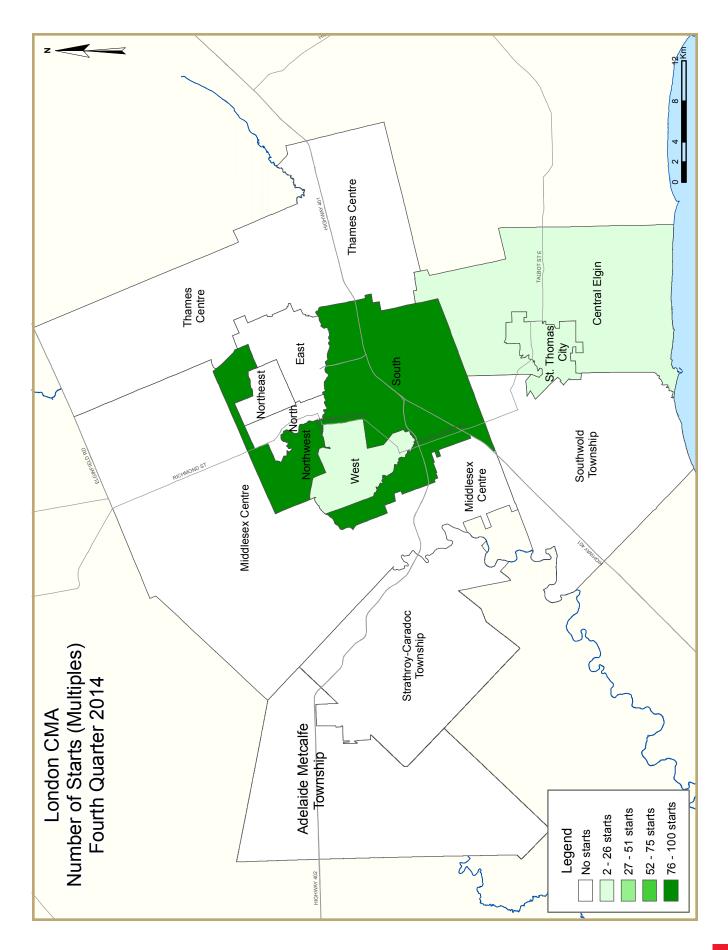

Lower Paying Jobs Exchanged For Higher Paying Jobs In 2014

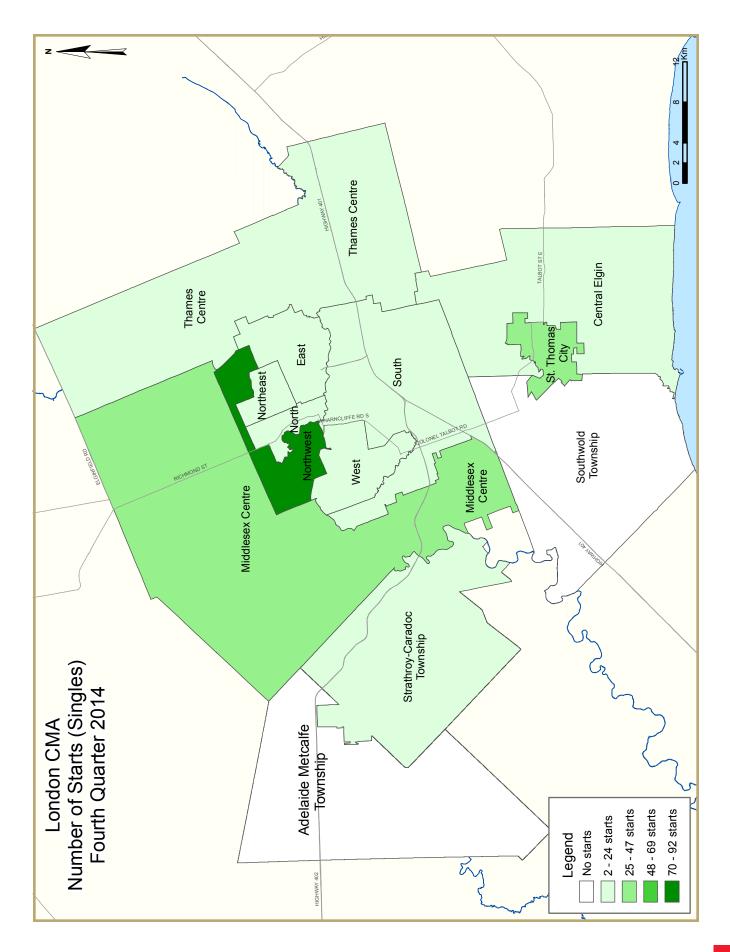

On an annual basis, the number of people employed in London CMA increased by less than 1% compared to 2013. However, more people had jobs in higher paying industries, which are more likely to support homeownership demand. In 2014 jobs were added primarily in industries such as educational services, public administration and information, culture and recreation. According to Statistics Canada's Labour Force Survey, an additional 4,500 Londoners worked in education services, 1,400 in public administration and 1,000 in information, culture and recreation. Nearly half of the jobs lost this year were in the trade industry, which had annualized average weekly earnings to higher existing home sales in 2014. Workers in the information, culture and recreation industry had annualized average weekly earnings of \$37,500 per year, which could have afforded an existing row home or condominium apartment with the minimum five per cent down payment. With fewer options for homeownership, the additional jobs in information, culture and recreation likely led to fewer existing home sales than jobs added in educational services and public administration. However, the \$37,500 average income would have afforded rent on most rental units in London CMA, contributing to a lower vacancy rate.

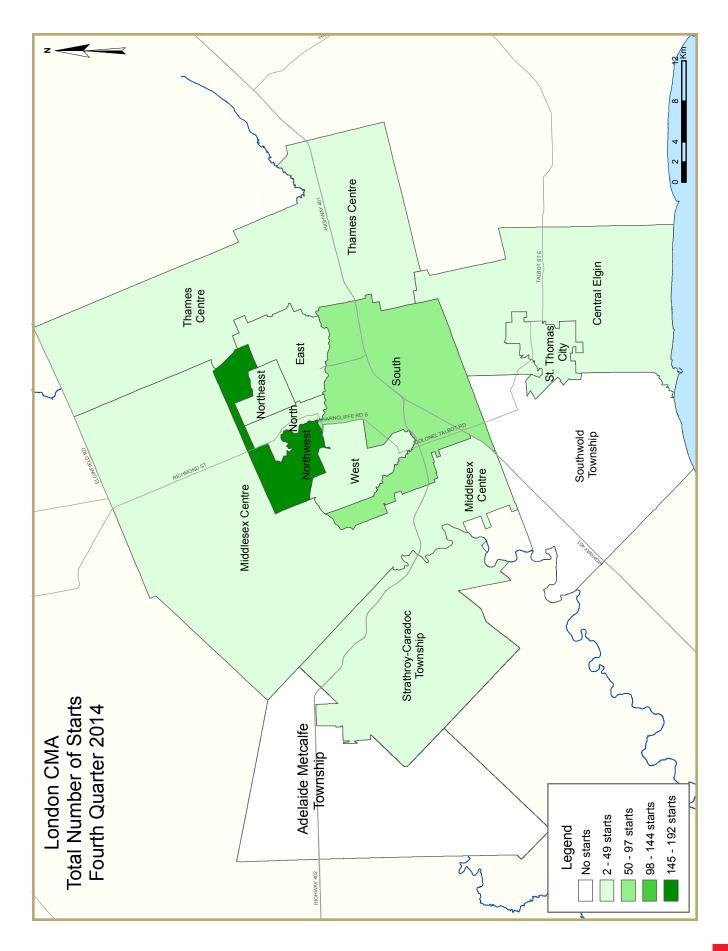

of approximately \$33,500. The annualized average weekly earnings for an employee in education services and public administration were both roughly \$60,000, greater than the income required to purchase most dwelling types in the existing home market with the minimum five per cent down payment. Only the purchase of an average two-storey or ranch style home in London CMA would have required additional income or a larger down payment. Therefore, it is reasonable to conclude that more people working in higher earning industries such as educational services and public administration contributed

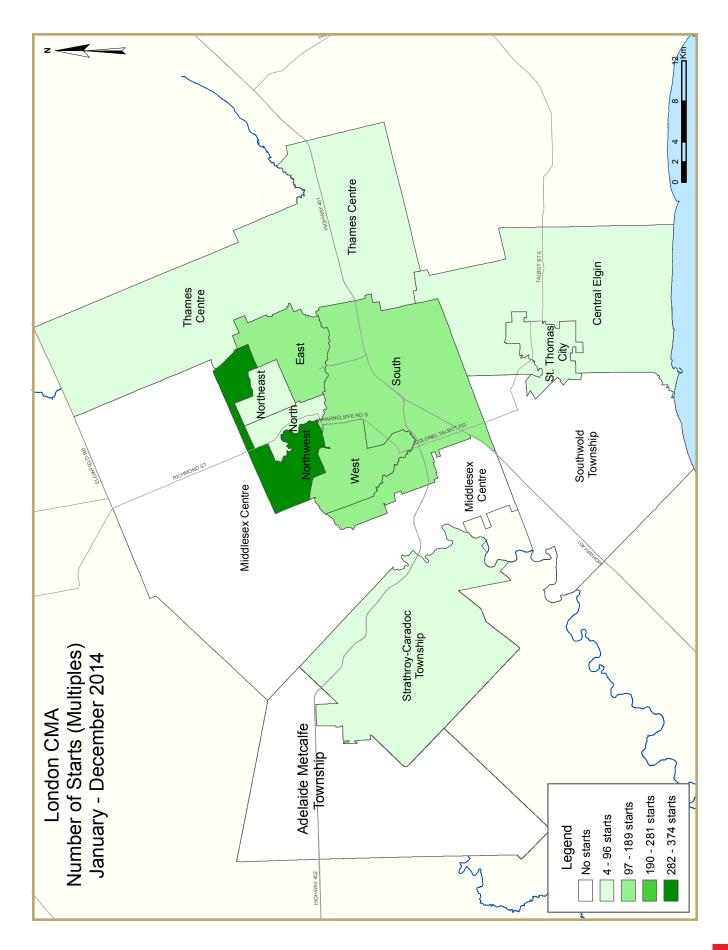

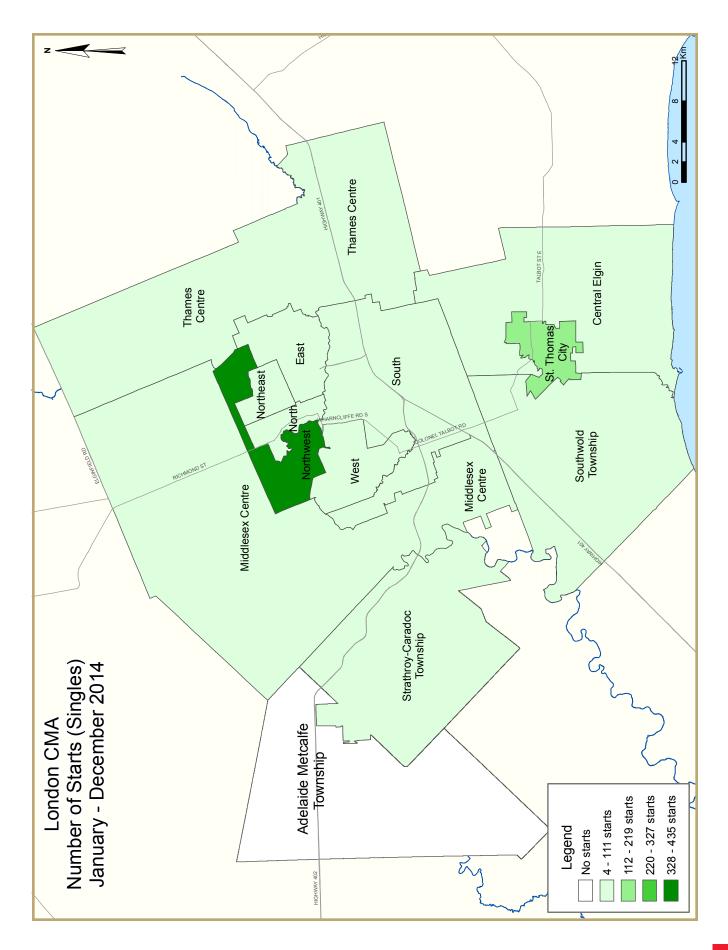

*Required income is mortgage carrying costs divided by 0.32 to reflect the usual 32 per cent gross debt service ratio. Mortgage carrying costs are calculated on the average MLS[®] price, a 5 per cent down payment, the fixed five-year posted mortgage rate and 25 year amortization.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "**dwelling unit**", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "**Single-Detached**" dwelling (also referred to as "**Single**") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "**Semi-Detached (Double)**" dwelling (also referred to as "**Semi**") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "**Row (Townhouse)**" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
