

CANADA MORTGAGE AND HOUSING CORPORATION

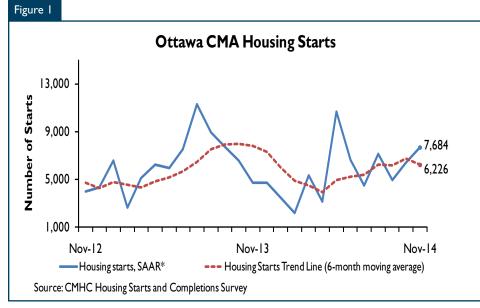

### Date Released: December 2014

# Highlights

- Housing starts rose due to an increase in apartments, mostly rental units.
- Low-rise starts weakened this month.
- Employment trended higher due to a rise in part-time jobs.

- I Highlights
- 2 Housing Market Overview
- 4 Maps
- 10 Tables

#### <sup>5</sup> SAAR<sup>2</sup>: Seasonally Adjusted Annual Rate.

<sup>I</sup> Ontario part of Ottawa-Gatineau CMA

<sup>2</sup>The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

## Housing Market Overview

Housing starts in the Ottawa Census Metropolitan Area (CMA) were trending lower at 6,226 units in November compared to 6,729 units in October. The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

Ottawa's new housing construction trend edged lower in November due to a decline in both singledetached and multiple home starts trend; however, the trend decline in single-detached homes was more pronounced. Actual starts for this month posted growth as they were 12 per cent above the 5-year average for all Novembers since 2009. This slight increase was led by new apartment construction. Notably, seventy percent of these new apartment units were purpose-built rentals. Factors such as robust immigration numbers and healthy empty nesters' demand

for rentals are prompting rental construction.

This month most of the starts in Kanata were for purpose-built rental units, resulting in this region capturing the highest number of housing starts. Gloucester held the second highest share of starts, with almost 40 per cent of all rows concentrated in this region. West Carleton, Clarence Rockland and Russell captured 14 per cent of all single-detached houses. Although posting a declining trend, single-detached home construction remains an attractive option in the outer suburbs, as they remain relatively affordable when compared to their counterparts closer to the Ottawa core.

In November, seasonally adjusted resale market transactions declined compared to the previous month. Sales<sup>3</sup> dipped for both the freehold and condominium<sup>4</sup> segment of the market with a greater decline for freeholds. However, in year-overyear terms November's total sales remained almost flat. Year-to-date to November freehold sales remained 2 per cent above the same period last year, while condominium sales were down 7.7 per cent. Excess supply of newly built condominiums competing with existing ones coupled with weak employment conditions of first-time homebuyers softened condominium resale.

Freehold and condominium listings fell this month at a higher rate than sales in their respective segments. This meant that the sales-to-new-listings (SNL) ratios for both segments of the market rose. In the freehold segment the SNL seasonally adjusted number recorded its highest monthly level this year at 0.51. As a result the average price increased by 1.4 per cent compared to October. The SNL in the condominium segment also rose but by a lower margin than the freehold segment. The overall average price in

Source: Ottawa Real Estate Board

\* Properties under Row type refer to one dwelling unit of a group of three or more attached, self-contained dwelling units of similar design and size, each unit separately titled)

 $\ensuremath{\mathsf{MLS}}^{\ensuremath{\texttt{B}}}$  is a registered trademark of the Canadian Real Estate Association

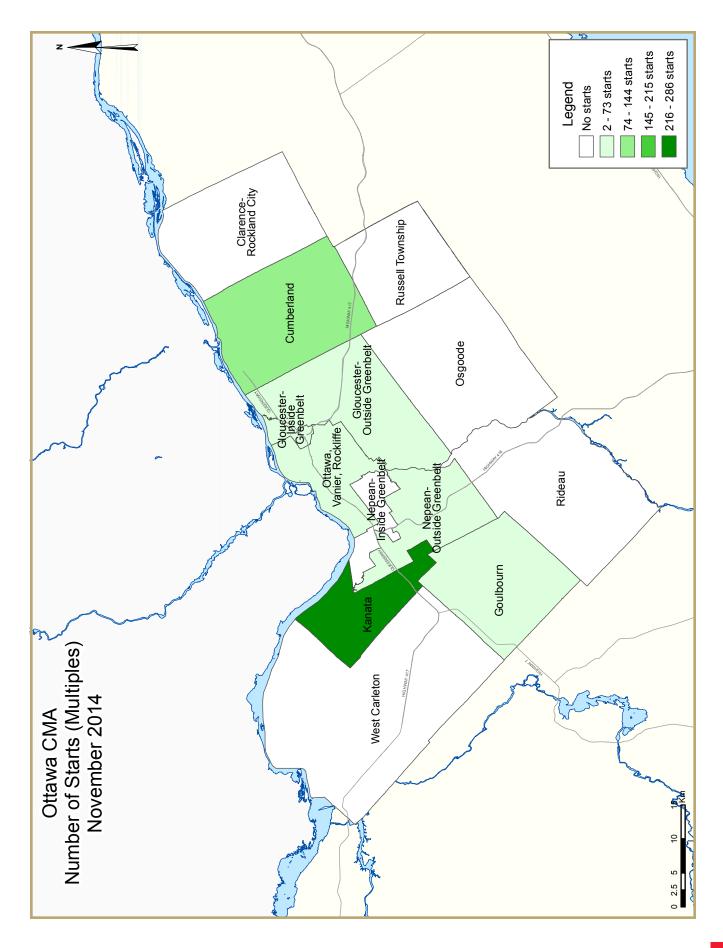

<sup>&</sup>lt;sup>3</sup> The freehold segment of the resale market includes single-detached, semi-detached and row homes. Single-detached sales represent on average 70 per cent of total sales in the freehold segment, rows take up another 23 per cent, while semi-detached units have a small share at 7 per cent.

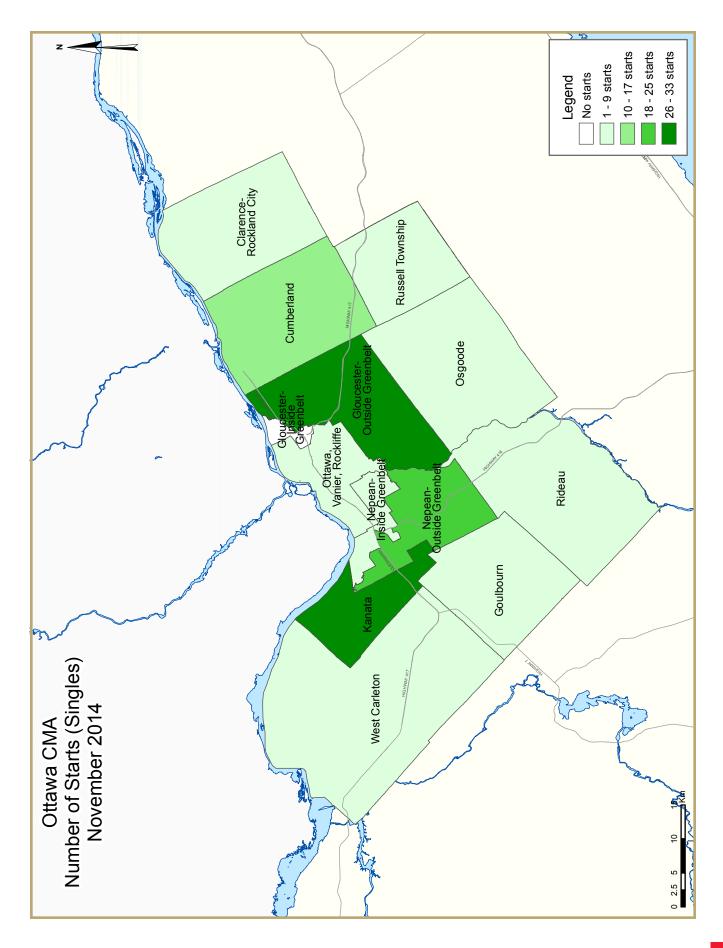

<sup>&</sup>lt;sup>4</sup> The condominium segment of the market includes condo rows, condo apartments and stacked condos. Condominium apartments on the resale market represent almost half of all condominium offerings, while condo rows make up one-third sales, the remaining share is held by stacked condo units.

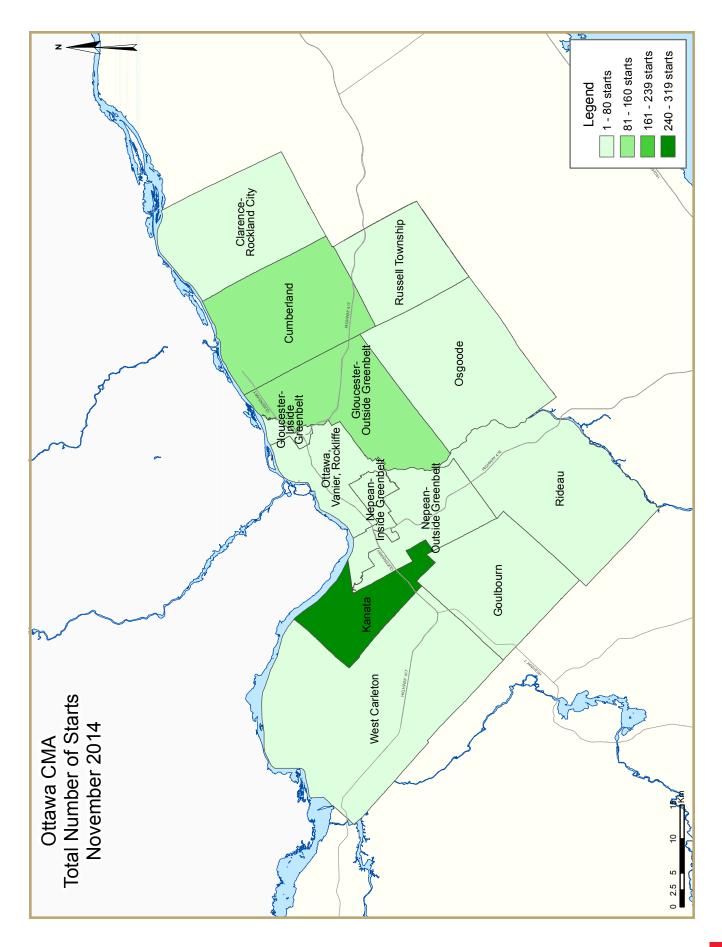

Ottawa inched up 1.2 per cent yearto-date to November versus the same period in 2013.

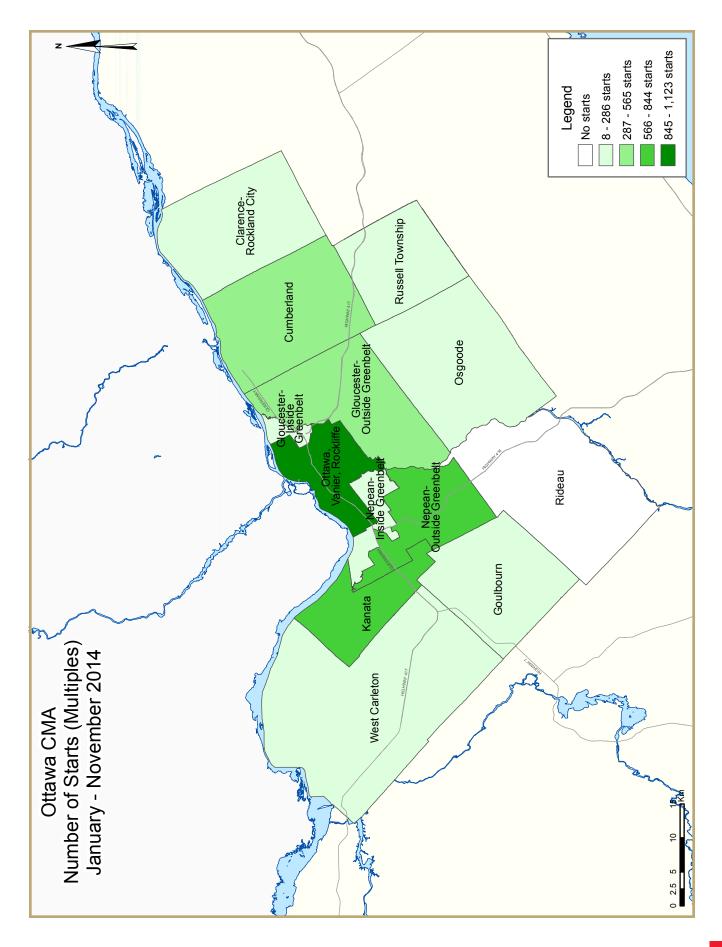

Seasonally adjusted employment rose once more in November, but

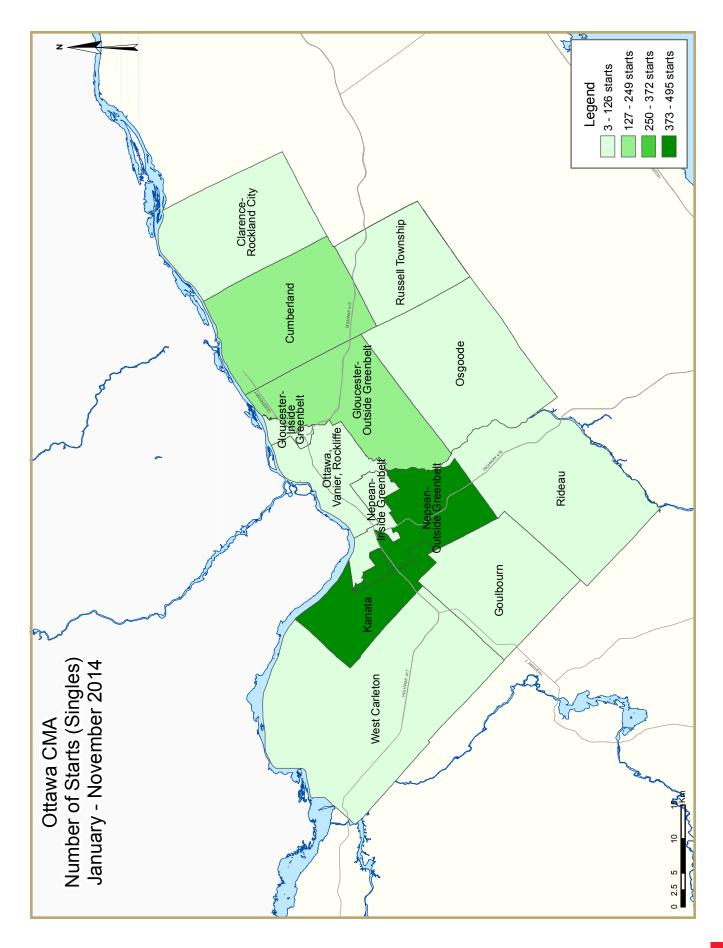

job market dynamics remained unchanged from October with the rise in employment resulting from an increase in part-time employment. Full-time employment continued to retreat. On the whole, year-to-date to the end of November employment rose slightly as compared to the same period last year.

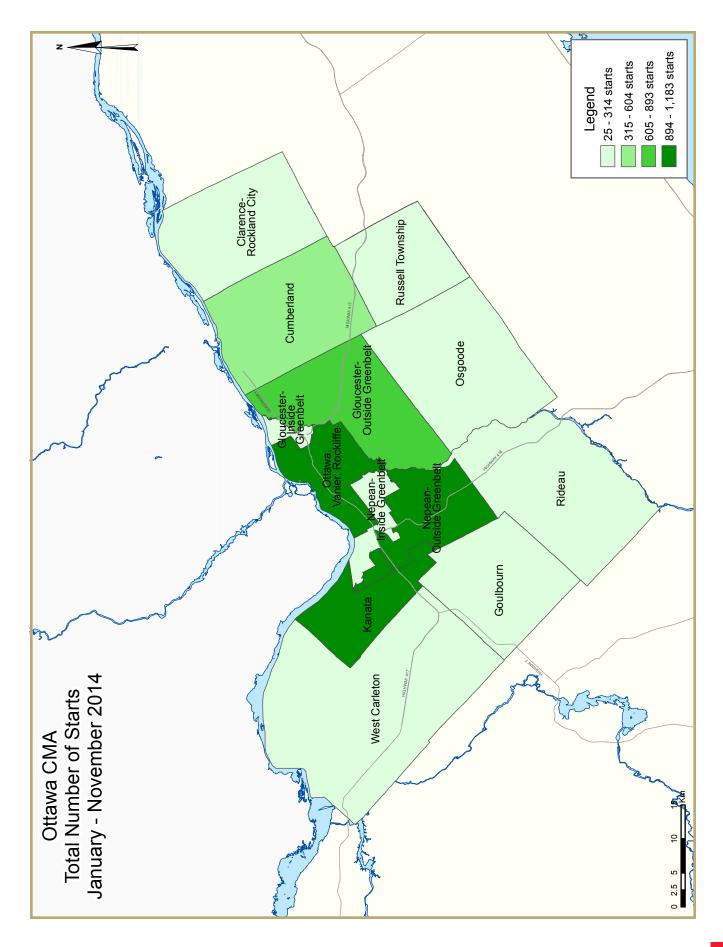

## HOUSING NOW REPORT TABLES

#### Available in ALL reports:

- I Housing Starts (SAAR and Trend)
- I.I Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type Year-to-Date
- 3 Completions by Submarket and by Dwelling Type Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type Year-to-Date
- 4 Absorbed Single-Detached Units by Price Range
- 5 MLS<sup>®</sup> Residential Activity
- 6 Economic Indicators

#### **Available in SELECTED Reports:**

- I.3 History of Housing Activity (once a year)
- 2.2 Starts by Submarket, by Dwelling Type and by Intended Market Current Month or Quarter
- 2.3 Starts by Submarket, by Dwelling Type and by Intended Market Year-to-Date
- 2.4 Starts by Submarket and by Intended Market Current Month or Quarter
- 2.5 Starts by Submarket and by Intended Market Year-to-Date
- 3.2 Completions by Submarket, by Dwelling Type and by Intended Market Current Month or Quarter
- 3.3 Completions by Submarket, by Dwelling Type and by Intended Market Year-to-Date
- 3.4 Completions by Submarket and by Intended Market Current Month or Quarter
- 3.5 Completions by Submarket and by Intended Market Year-to-Date
- 4.1 Average Price (\$) of Absorbed Single-Detached Units

# METHODOLOGY

#### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

#### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

# STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "**dwelling unit**", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

### **DWELLING TYPES:**

A "**Single-Detached**" dwelling (also referred to as "**Single**") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "**Semi-Detached (Double)**" dwelling (also referred to as "**Semi**") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "**Row (Townhouse)**" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental**: Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

# CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
