HOUSING MARKET INFORMATION

HOUSING NOW Ontario Region

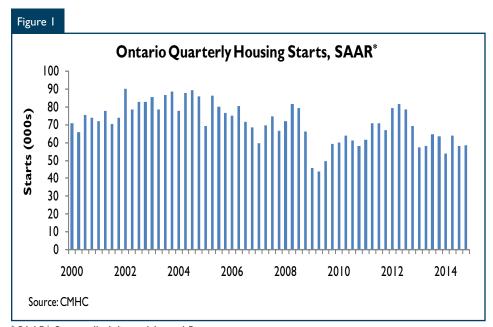

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2015

New Home Market

Ontario seasonally adjusted annualized home starts (SAAR¹) remained stable during the fourth quarter - inching higher to 58,584 SAAR units, up slightly from 58,130 SAAR units in the third quarter. Fourth quarter activity mirrored annual starts totals which eased to 59,134 units in 2014 from over 61,000 units in the prior year.

While single-detached home starts moderated during the fourth quarter, the more volatile multi-unit home construction sector, which includes activity in the semi-detached, row and apartment segment increased. By market, residential construction declined most in 2014 in northern and eastern Ontario with Sudbury and Peterborough leading the way. These

¹ The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

are centres whose resale markets are much cooler and better supplied, offering more choice to prospective buyers. On the other hand, starts grew most in Barrie and Kitchener-Waterloo. Meanwhile, builders continued to manage apartment inventories in the Toronto area by delaying new project starts further in 2014.

Single-detached home starts eased in the fourth quarter but remained remarkably stable in 2014 reaching 23,691 units, up slightly from the previous year. Despite rising singledetached home prices, low unsold inventories of both new and resale single-detached homes and continued low mortgage rates provided underlying support for single starts during the year. Longer term however, the construction trend has weakened as the single-detached home sector faces headwinds which includes: rising home prices, rising densification in urban centres, fewer sites for new home development and declining family sizes.

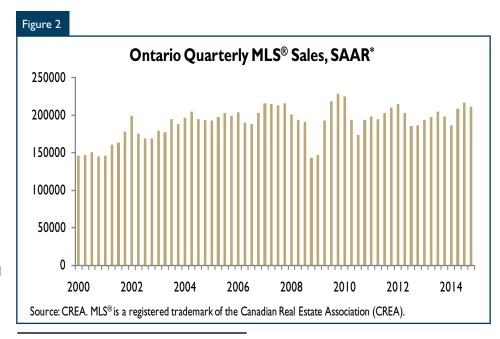

Ontario multi-unit home starts. which includes semi detached, row and apartment units, grew by six per cent to 35,000 SAAR units during the fourth quarter, up from 33,000 SAAR in the previous quarter. Nevertheless, multi-unit home construction declined in 2014 for a second consecutive year. Much of the multi-unit construction decline was fuelled by lower apartment starts. While apartment ownership inventories remain below previous peaks, they have been trending higher in recent years. Builders have refrained from starting new apartment projects and opted to channel new demand for condominium units towards existing inventories. New apartment starts were also tempered by high

apartment units under construction, owing to fewer completions in 2014. Builders are juggling a number of projects as labour and capital resources were stretched - preventing them from commencing new projects. However, the story varied by product tenure and type. While condominium apartment starts drifted lower, rental apartment starts continued to grow. Investment activity was boosted by lower rental apartment vacancy rates across most centres in Ontario and growing rental demand from echo boomers unable to purchase a home. Unlike apartments, town home construction also grew in 2014 as buyers looking for ground oriented housing found row housing more affordable.

Ontario new home prices, as per Statistics Canada NHPI index, grew in the fourth quarter compared to the previous quarter. All of the increase in new home prices was the result of increasing prices for the underlying structure. The land component of the NHPI remained steady. Builders were able to pass on higher costs and remain competitive as resale market prices grew at a faster rate compared to new home prices.

Resale Home Market

Following two consecutive quarters of growth, Ontario existing home sales slowed by 2.5 per cent to 211,796 SAAR units in the fourth quarter. Nevertheless, sales posted increases in 2014 and reached the highest levels since 2007. Pent-up demand which built during the winter season, lower mortgage rates in tandem with an improving labour market encouraged more buyers into the market as the year progressed. Many potential buyers were also responding to a growing level of new listings as vendors provided choice by putting their homes up for sale. A scan across the province shows that existing home sales grew the fastest

^{*} SAAR1: Seasonally Adjusted Annual Rate.

in Thunder Bay, St. Catharines-Niagara and London while posting declines in Greater Sudbury, Kingston and Windsor in 2014. Ontario's largest market – Toronto continued to post growth despite being the most expensive market in Ontario.

Listings remained elevated but did ease during the fourth quarter. The Ontario resale market remained in a balanced state during the fourth quarter — exactly where it has been since early 2010. A market classified as balanced means prospective buyers have enough available homes for sale to choose from. However, there were exceptions to this rule. Hamilton, Oshawa and Barrie are centers whose

markets are tight thanks to incoming demand from households bypassing the more expensive GTA market. The Thunder Bay market continued to remain warm during the fourth quarter despite improving supply conditions. Meanwhile, eastern and northern Ontario markets, which include Ottawa, Kingston and Sudbury, remained relatively cooler.

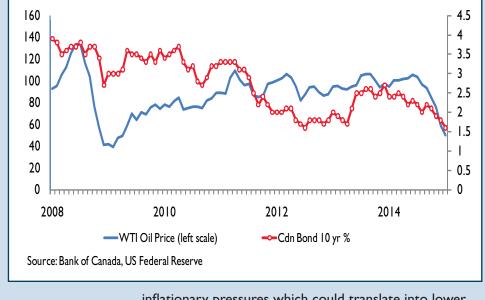

Despite a cooling of sales, Ontario average resale prices grew faster in the fourth quarter. In fact, average prices grew faster in relation to price indices that track similar type homes such as the Canadian Real Estate Board Home Price Index. This suggests that sales of single family

homes continued to skew average prices higher. According to the CREA Home Price Index (HPI), major market prices for low density housing, particularly in Toronto, continued to outpace price gains for higher density housing. During the fourth quarter, average home prices grew the fastest in southern Ontario centres such as Toronto, Hamilton and St Catharines-Niagara. Meanwhile prices cooled in eastern Ontario markets such as Ottawa and Kingston as job and resale markets remained softer. For the year, Ontario home prices grew by over seven per cent versus a 4.7 per cent increase in 2013.

Lower Energy Prices Spell Good News For Ontario Housing

Figure 3

Oil prices peaked in the summer of 2014 and have been trending lower since. Gas prices have also followed suit. Low energy prices support the economy which in turn is good news for the housing market. For example, an improving economy supports the job market which strengthens Ontario demand for resale homes within a quarter and new home construction demand typically within six to nine months. Low energy prices transmit their effect on the economy in a number of ways. Firstly, when gas prices drop, consumers have more money to spend on other goods and services which creates jobs.

Secondly, low energy prices take pressure off Canada's currency – making Ontario exports more competitive on global markets. Thirdly, lower energy costs enable production costs to drift lower for manufacturers - which helps companies compete. Last but not least, the drop in energy prices, if pronounced, can reduce

inflationary pressures which could translate into lower interest rates. Long term bond rates have been trending lower since the spring. As for short term rates, the Bank of Canada followed suit by cutting its overnight rate on January 21 which should provide further support to Ontario's housing market in the months ahead.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
