

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: December 2014

Highlights

- Actual housing starts increase in November
- Average absorbed price of single-detached homes moves up
- Multi-family ownership inventory remains low

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Total housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 15,181 units in November compared to 14,637 in October. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA increased to 1,501 units in November, up from 1,125 in the same month of 2013. Gains were recorded in both single-detached and multi-family housing starts. On a year-to-date basis, total housing starts were down five per cent compared to the same period of 2013.

Strength in the single-detached segment of the housing market continued in November. Foundations were poured on 641 single-detached homes in November, a 13 per cent increase from the 567 started in the same month one year prior. Within city limits, single-detached starts reached 442 in November, up from 377 in the corresponding month of 2013. On a year-to-date basis, single-detached starts in the Edmonton CMA increased 13 per cent year-over-year. Employment growth, wage gains, and relatively low inventory in the competing resale market have contributed to higher demand for single-detached homes.

Completions of single-detached homes increased three per cent year-over-year in November to 599 units. The number of absorptions also moved higher, rising from 535 in November 2013 to 571 this November. With completions outpacing absorptions, the number of unabsorbed single-detached homes in inventory rose to 532 in November, up from the 504 units in inventory in October 2014 but still down from 640 in November 2013.

Figure 2

Source: CMHC

The average absorbed price for a single-detached home in the Edmonton CMA increased 27.6 per cent to \$643,672 in November from \$504,611 in the corresponding month of 2013. There was a higher proportion of luxury homes absorbed in November, which contributed to the rise in the average absorbed price. Homes priced above one million dollars accounted for eight per cent

of total absorptions, up from four per cent in same month of 2013. After 11 months of 2014, the average absorbed price was \$567,005, up 7.2 per cent from the same period of 2013.

Multi-family starts in the Edmonton CMA, which include semi-detached, row, and apartment units, rose to 860 units in November from 558 in the same month of 2013. Increases were recorded in each segment of

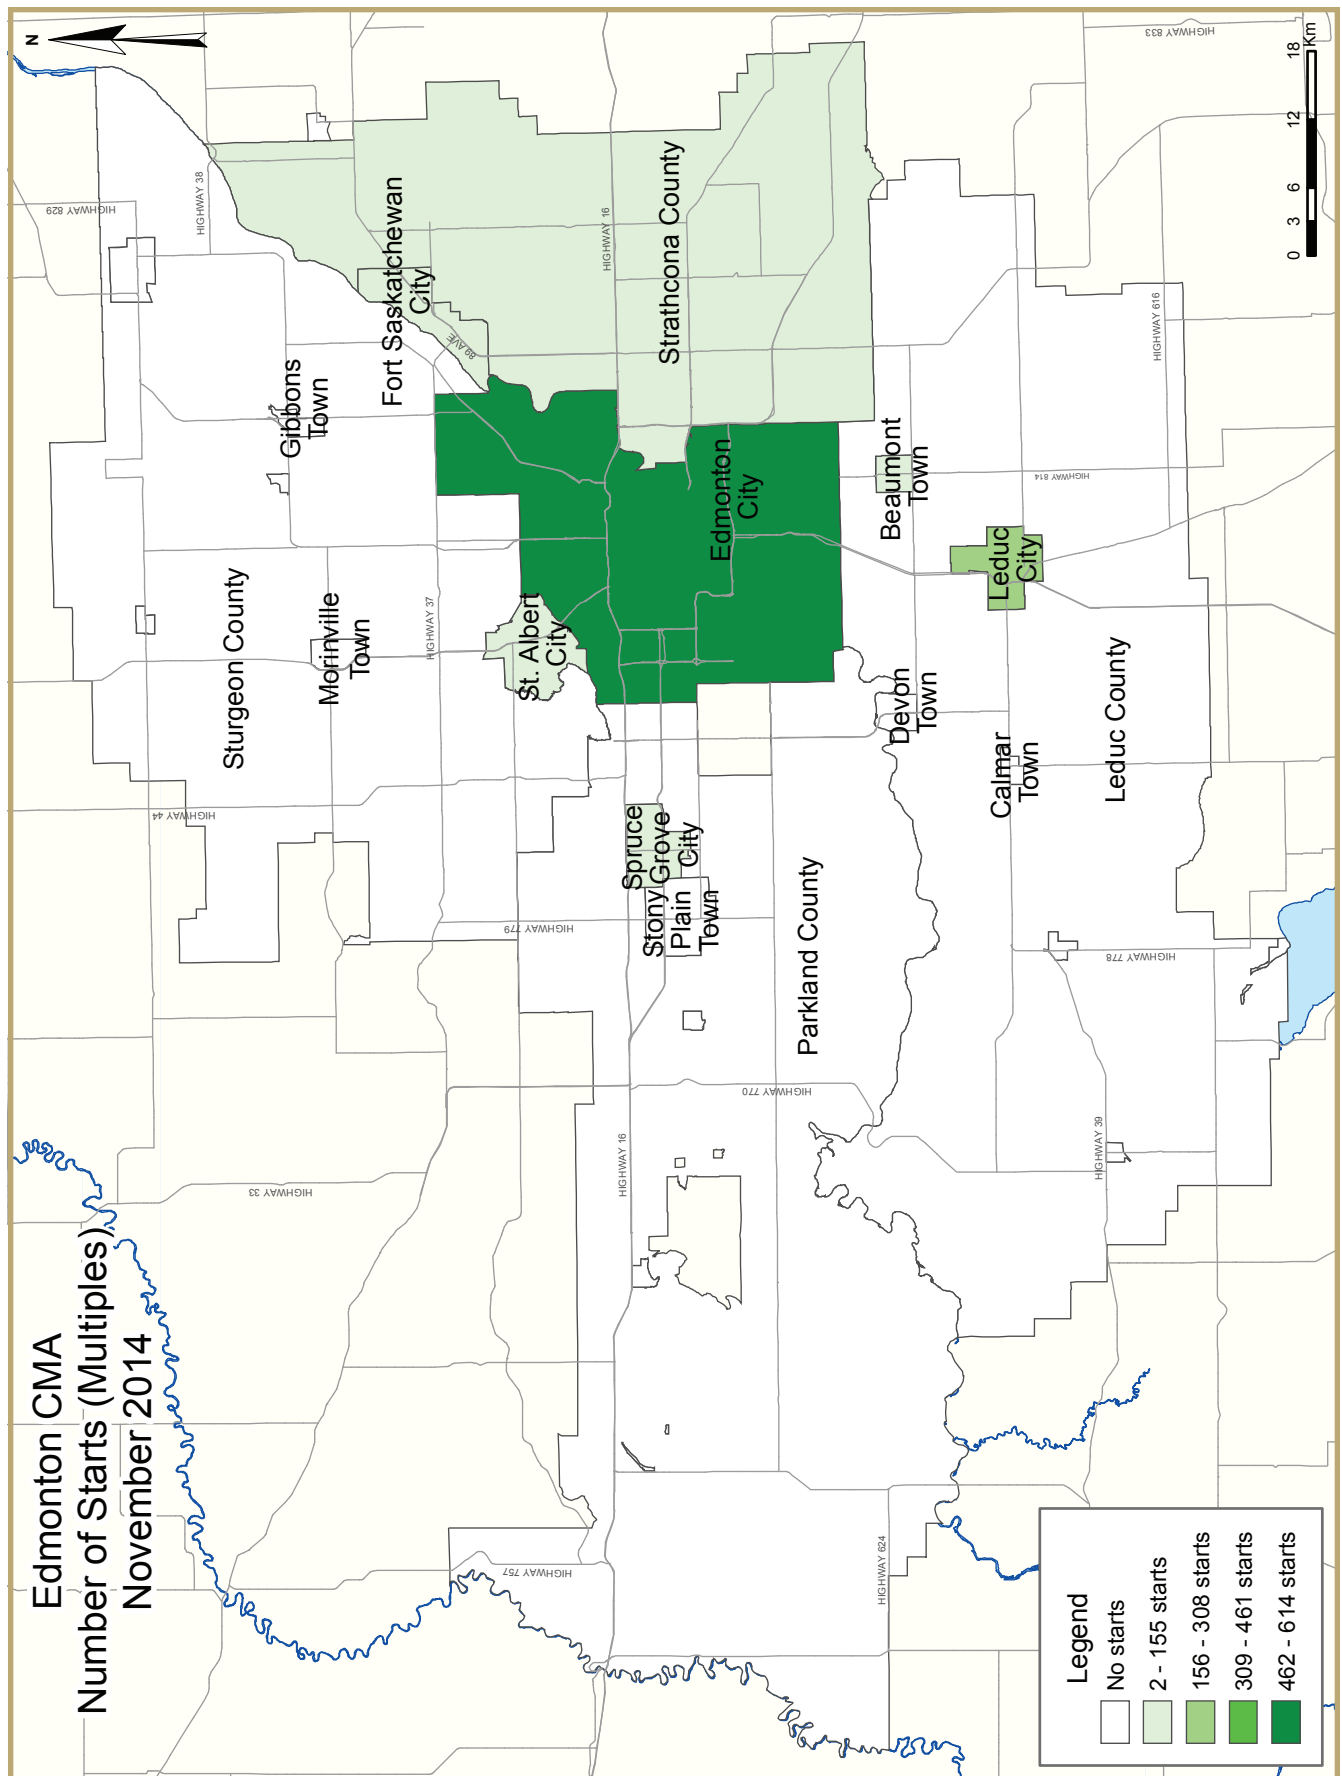

Figure 3

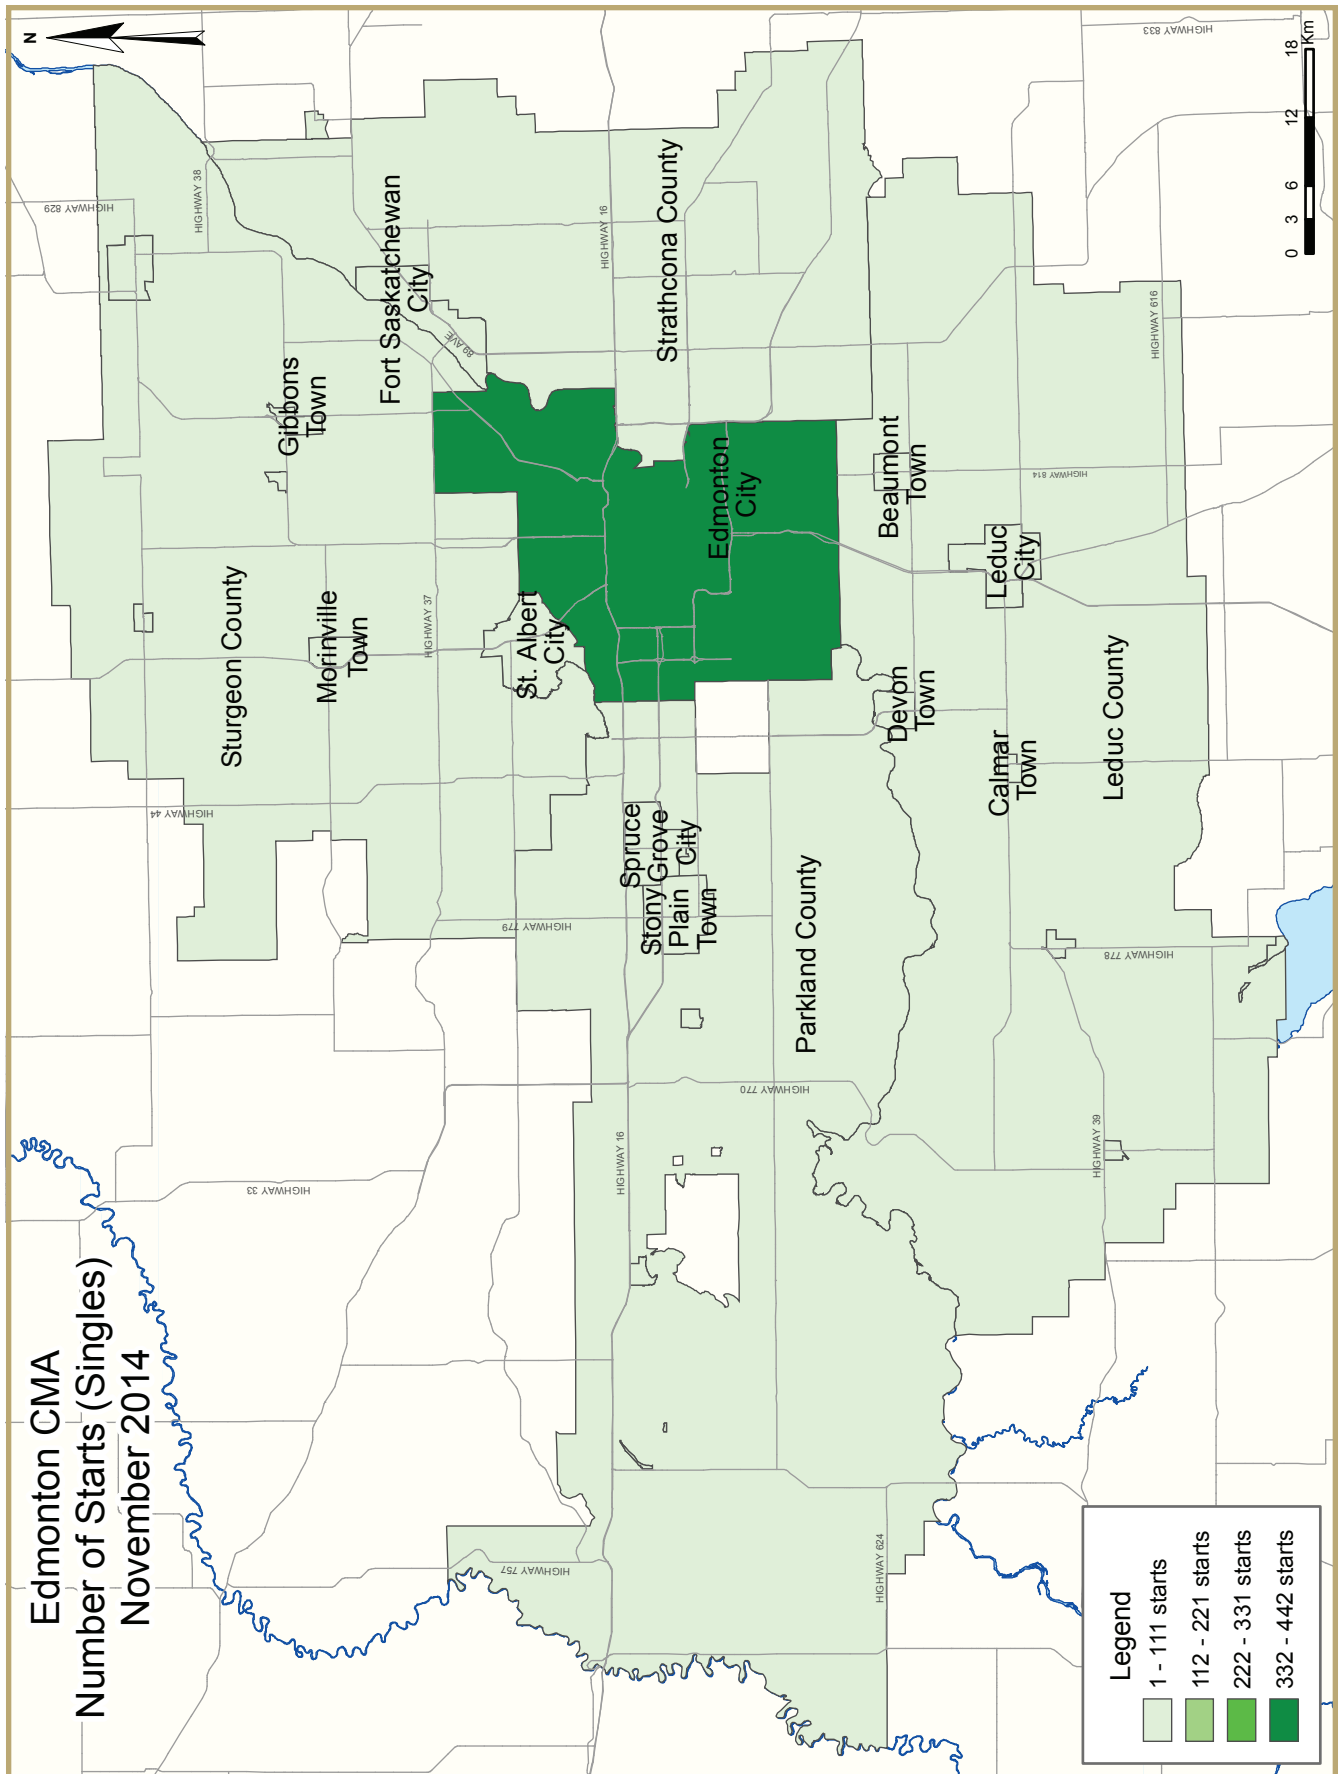

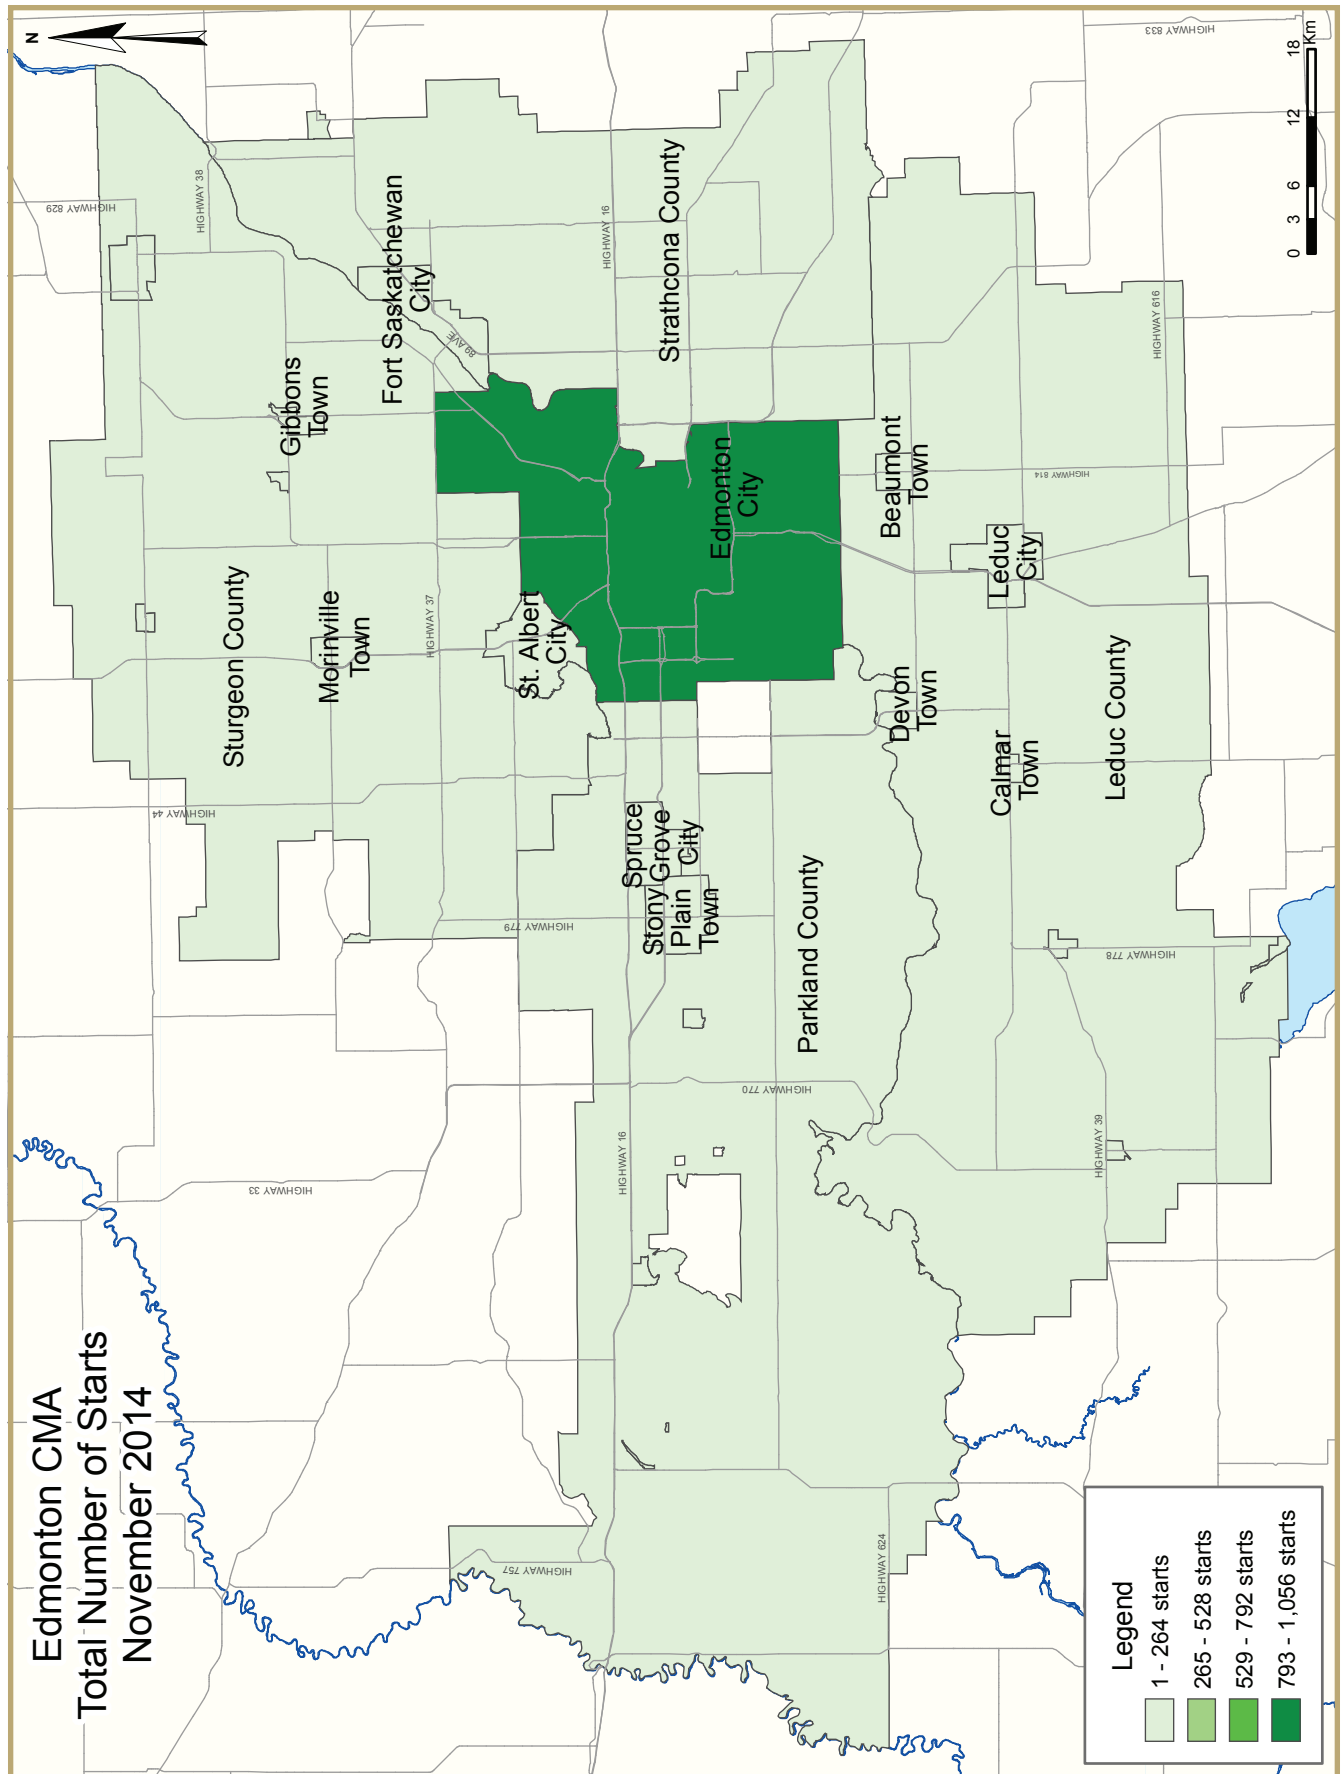

Source: CMHC

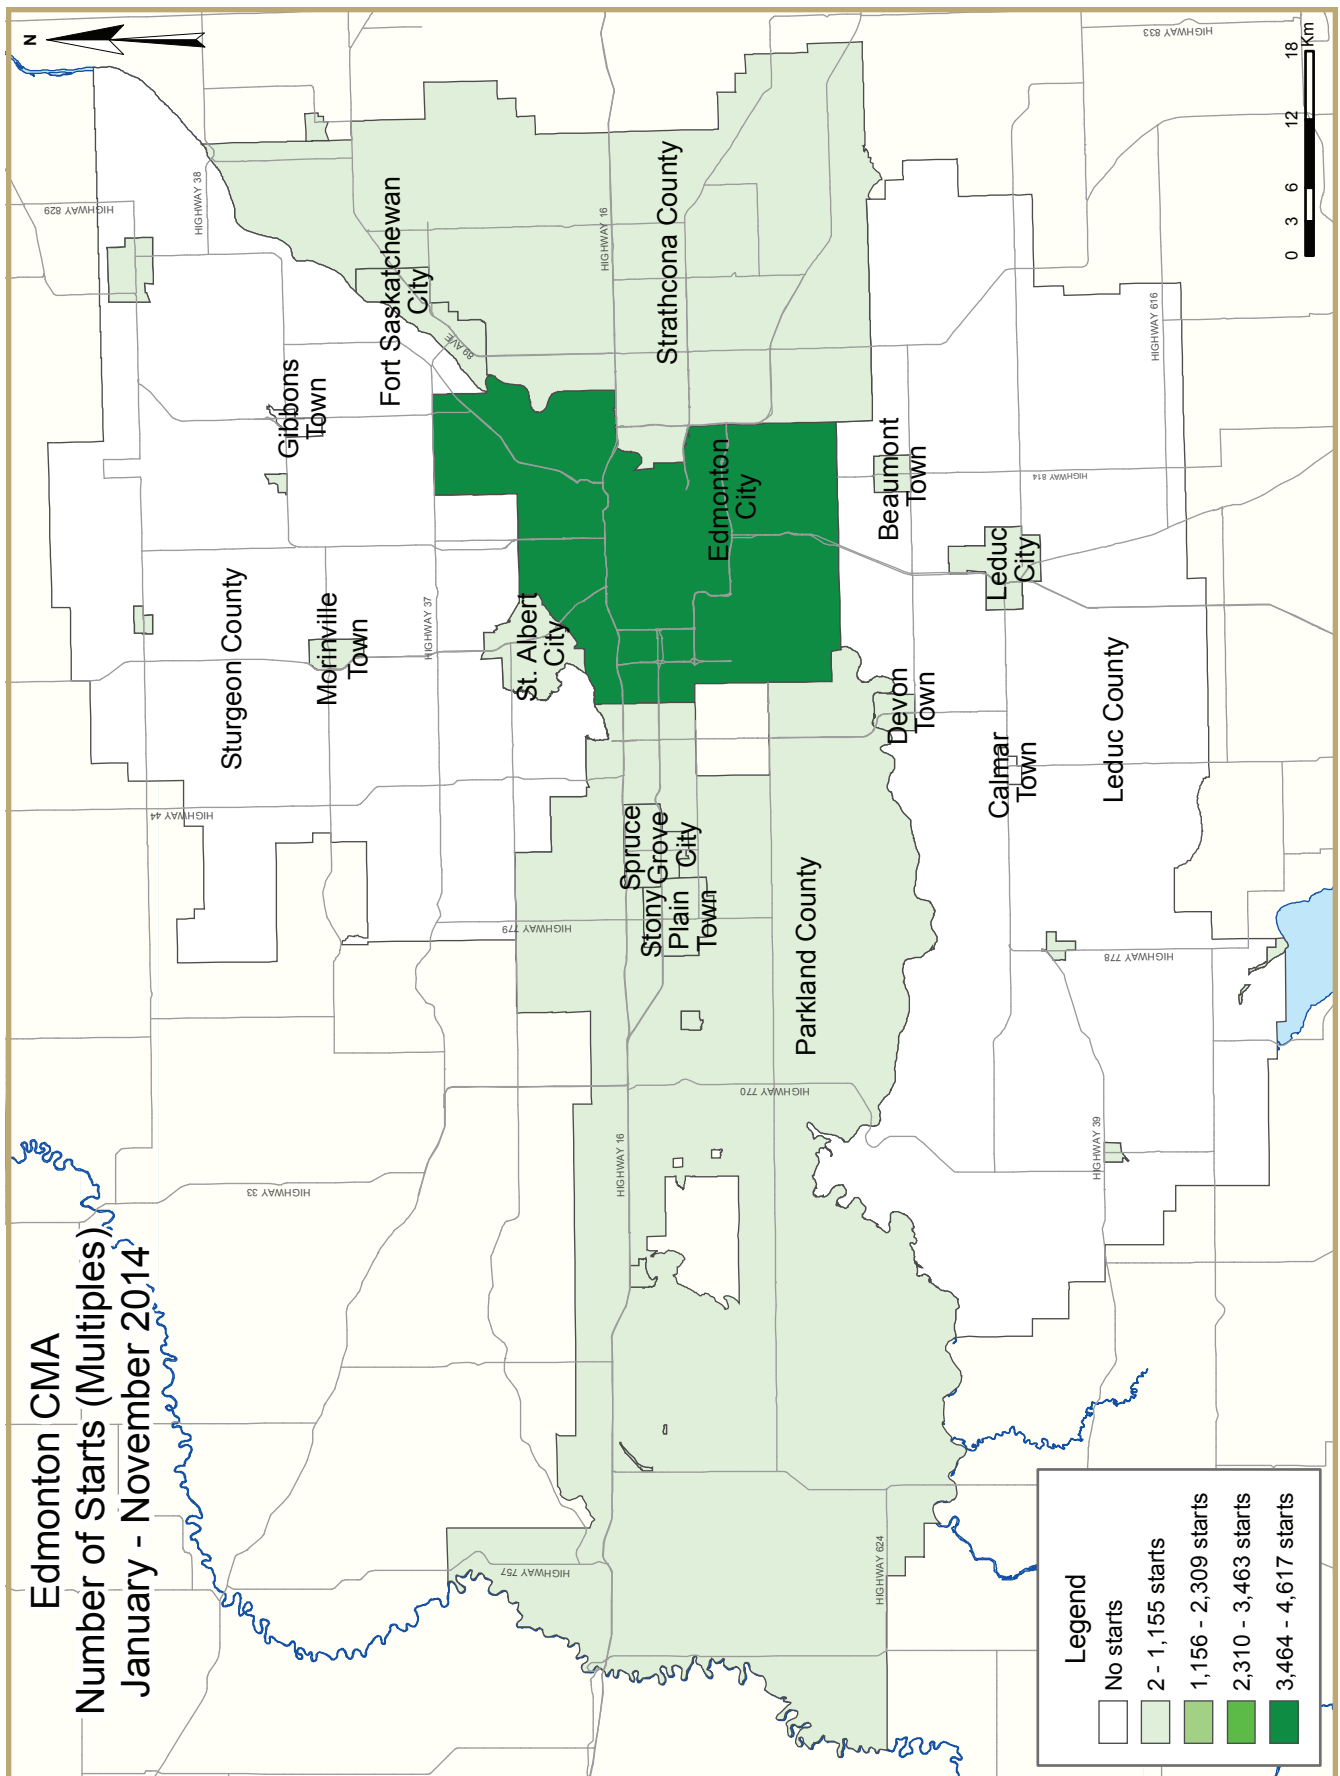

the market with apartments posting the largest gain. Within the City of Edmonton, multi-family starts were 66 per cent higher over the same comparison. Despite the gain in November, on a year-to-date basis multi-family housing starts in the Edmonton CMA were down 18 per cent. After reaching a near-record level in 2013, multi-family starts have moved lower in 2014 as builders reduce starts to ensure that inventory levels remain manageable.

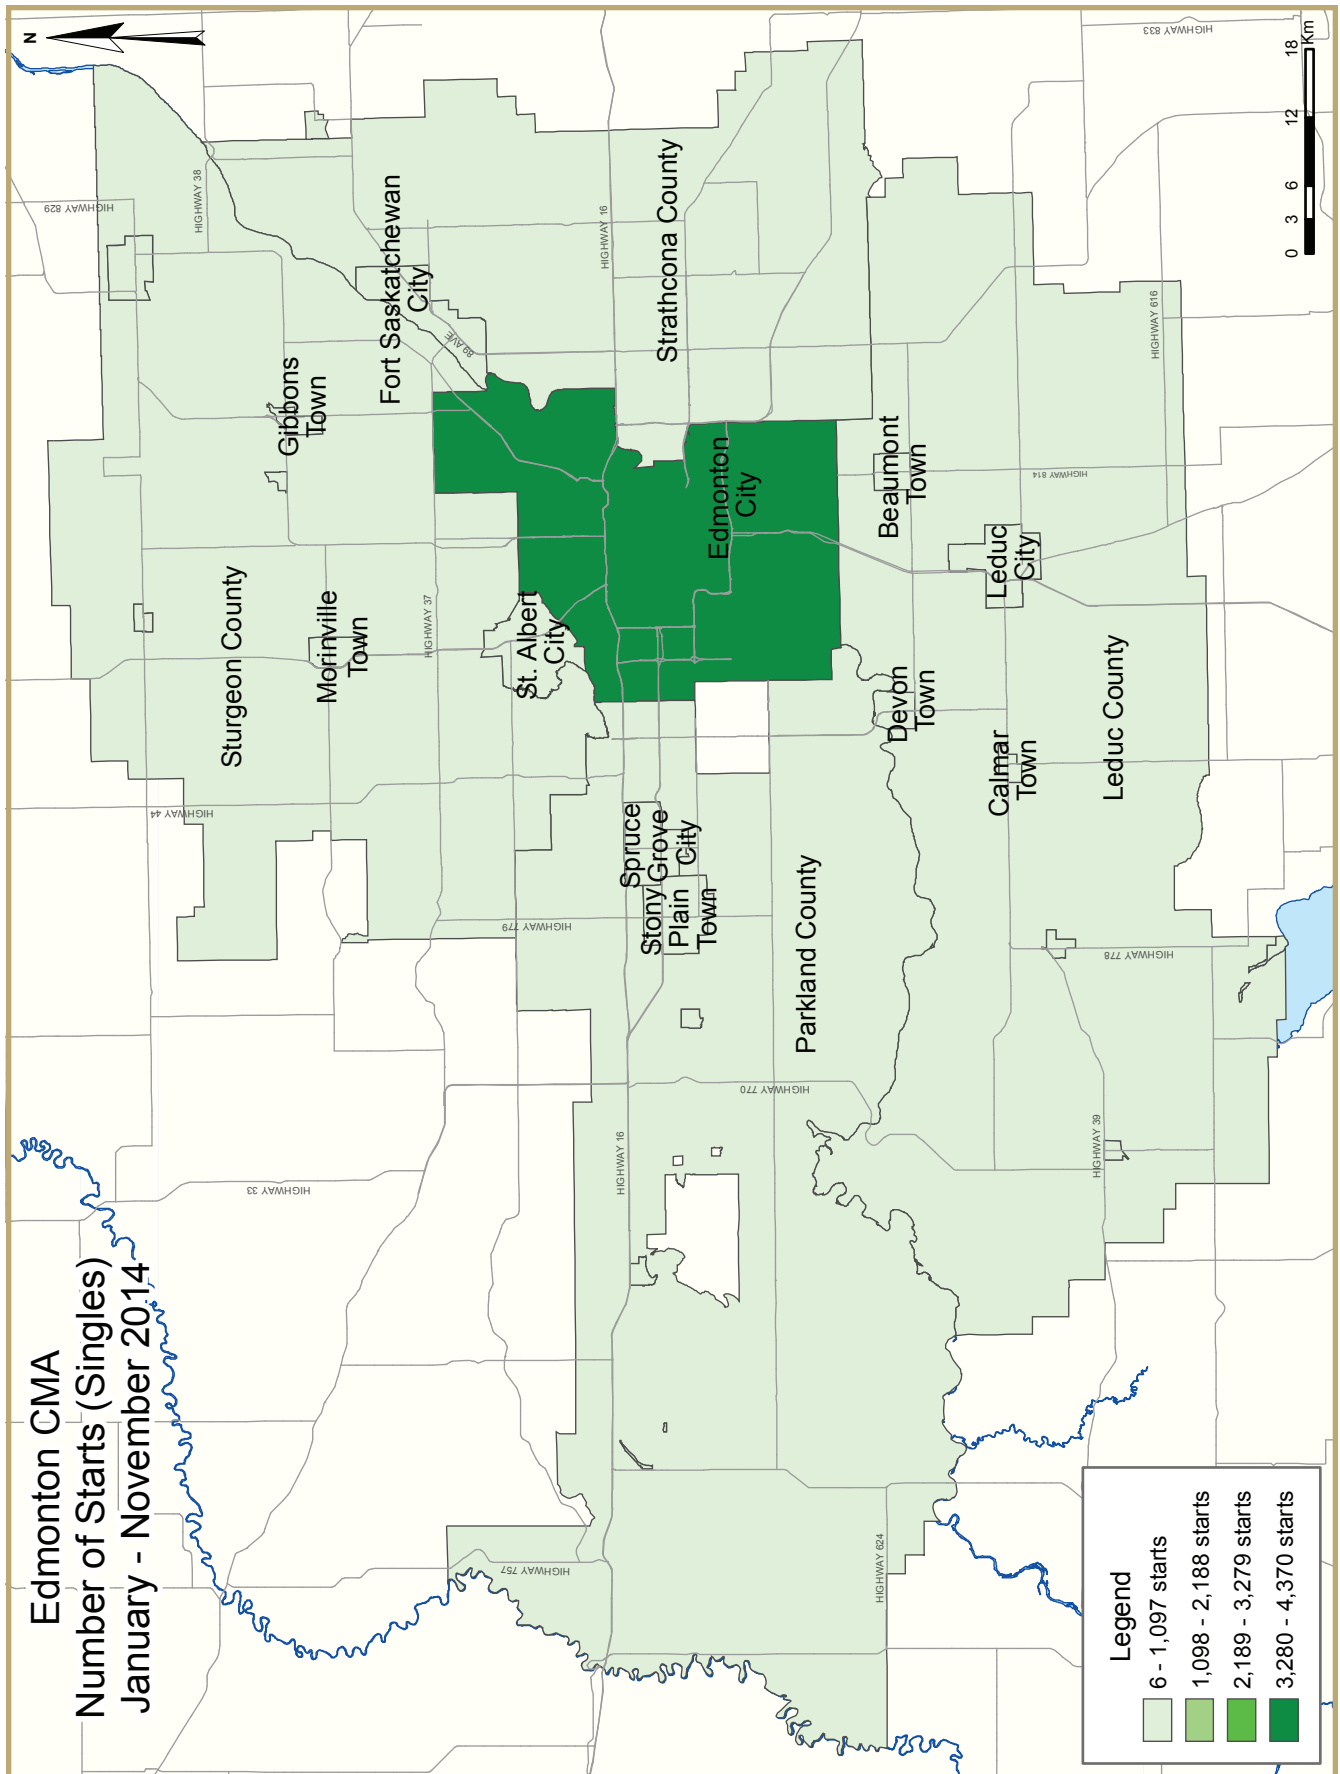

There were 10,025 multi-family units under construction in November, up three per cent from 12 months prior. At the same time completions reached 952 units, one per cent higher than in November 2013. Despite the uptick in completions, the number of multi-family units of ownership tenure in inventory was down 26 per cent year-over-year to 451 units. Ownership inventory was lower in each of the three market segments, with row units posting the largest decline. Although inventory remained relatively low in November, the elevated number of units under construction is expected to put upward pressure on inventory in 2015 as units move into completion.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
