### Note to users:

With the July 2002 release, the monthly GDP by industry program has introduced the first stage of conversion to a Chain Fisher formula, by adopting annual chained Input-Output benchmarks in its calculation of real GDP for the period 1997 to 1999. However the data, from January 2000 onwards, are 1999 Laspeyres-based estimates. The monthly GDP results will now be expressed in chained 1997 dollars. This conversion will bring the monthly GDP by industry estimates more in line with the quarterly expenditure-based GDP data, chained quarterly. Survey redesigns and methodological changes due to NAICS conversion and other developments have resulted in larger than normal annual benchmarking revisions to certain industries.

The definition of the **Information and communication technologies (ICT)** sector was modified to conform more closely to the international standard as developed by the Organisation for Economic Co-operation and Development (OECD). Specifically, libraries and the retailing of ICT commodities were removed from the aggregation, but due to data limitations we were unable to include the repair of ICT equipment in our aggregation. The estimates were reworked back to January 1997.

## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at factor cost as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the Euro-pean Communities, International Monetary Fund, Organization for Economic Co-operation and development, United Nations and World Bank.

# Highlights

## July 2002

The Canadian economy expanded a healthy 0.4% in July, following a 0.1% increase in gross domestic product (GDP) in June. Industrial production rose 1.5% in July, due to solid gains in the manufacturing sector. Meanwhile, US industrial production grew 0.4% in July. While both economies registered sharp increases in utilities' output, the growth seen in the manufacturing sector north of the border, did not occur in the South.

Manufacturers led the growth in Canada as strong demand and new US emission regulations on truck engines boosted Canadian production of both cars and heavy trucks. Utilities output also surged, due to the heat wave which affected eastern Canada and the north-eastern United States during the early part of July.

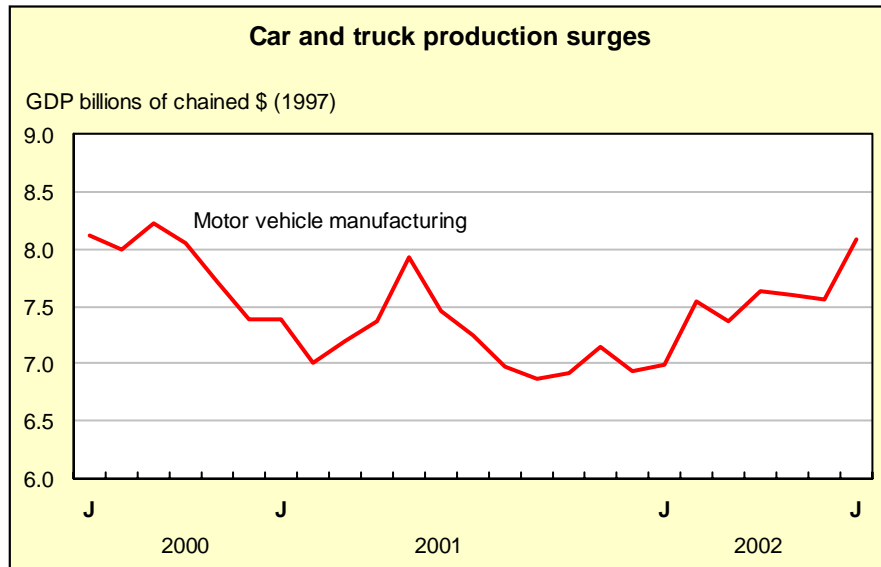

Although home re-sales slowed in July, robust demand for new housing continued to boost construction and its feeder industries in manufacturing. The value of building permits hit an all-time high in July, surpassing the record set in the late 1980s. An increase in residential loans helped the finance industry expand for the seventh consecutive month.

### US demand for cars and trucks boosted manufacturing

Manufacturing rebounded after a weak June, led by the transportation sector. Canadians' appetite for new cars took a pause in July and was replaced by our car-hungry Southern neighbours. Higher production levels resulted from the introduction of new car models as well as additional production capacity. New emission regulations in United States, which are scheduled to come into force on October 1st, and the resolution of a strike, boosted production of heavy trucks.

This new production capacity as well as shorter summer shutdowns produced an unseasonably high flow of new cars to the wholesale market in July. Canadian exports of cars hit their highest level since January 2000, as US auto sales surged in July, stimulated by low interest rates and continued big price incentives. Sales at Canadian car dealerships, on the other hand, declined and were the largest contributor to the contraction in retail trade.

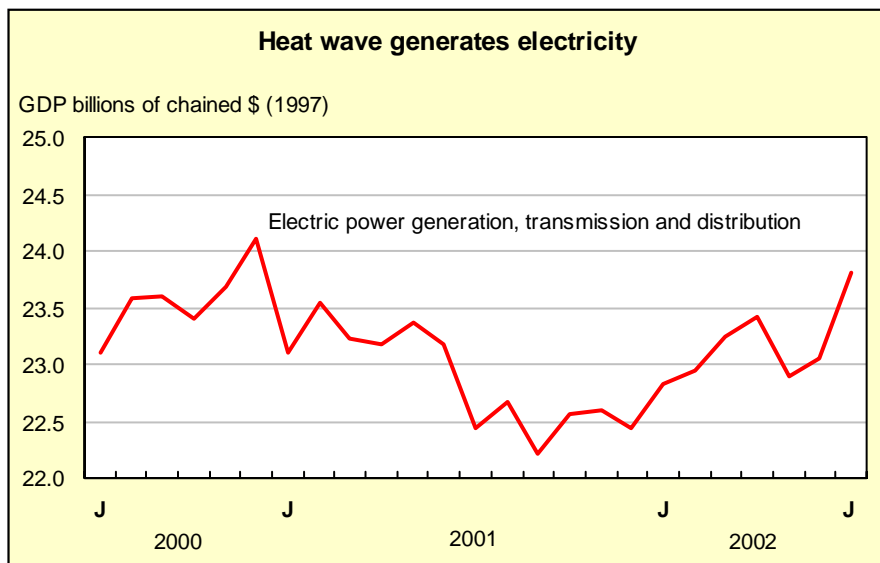

Increased activity in sawmills, particularly in British Columbia where many mills did not take their usual summer shutdowns in July, accounted for most of the strength in wood product manufacturing. Exports of lumber regained some strength after the sharp drop registered in June, but remained 10.2% below last July's levels.

The pulp and paper industry also rebounded in July encouraged by higher pulp prices. Exports for pulp and paper were at their highest levels in about a year as manufacturers ramped up production. The second quarter capacity utilization rate in paper manufacturing reached 90.1%, the highest level in just over a year.

The continuing weakness in the ICT manufacturing industry dragged down the total ICT sector. The GDP of ICT manufacturing reached its lowest level since November 2001. Although the drop was widespread, the telephone apparatus industry contributed the most to the decline, as sluggish demand caused several permanent and temporary shutdowns. Wholesaling of computers regained some strength in July, but remained short of May levels.

**Utilities propelled by the heat wave**

The heat wave in eastern Canada and north-eastern United States pushed up electricity demand. Electricity generation and transmission reached its highest level since December 2000. Consumer electricity prices in Canada increased 3.2% as Ontario broke energy consumption records early in July and forced the import of electricity from the US and other provinces.

**Consumers pull back their spending**

Canadian consumers did not spend as freely on non-house related goods and services in July as they did in June, leaving the output in the retail trade industry slightly lower. Although most types of retail stores registered a decline in July, auto dealers contributed the most to the contraction. Significant increases in spending at service stations and grocery stores were not enough to offset the drop at car dealerships. Lower activity levels were reported in the travel-related industries, including air transportation, hotels, gambling and spectator sports industries.

**Drought in western Canada affecting crops**

The output of the agriculture, forestry and fishing industry dropped significantly in July. Crop production fell to its lowest level in years, due to the most severe drought experienced in the western provinces in 40 years. Exports of wheat, rapeseed and other cereals fell sharply in July, resulting from a shortage of these grains. Reduced inventories in July pushed up prices of wheat and rapeseed to levels not seen in three years.

## The pharmaceutical industry: An examination and diagnosis

By Fabienne Leclerc

Canada's pharmaceutical products and drugs industry is one of the nation's most dynamic. Between 1997 and 2001, its net economic output, as measured by gross domestic product, increased by nearly 50%. Furthermore, this industry is one of the most research and development intensive sectors in Canada. In 2001, it accounted for 8% of all industry R&D.

The pharmaceutical and medicine manufacturing industry includes companies whose main activity is to manufacture drugs, medicines and related products for human or veterinarian use.

According to the Canadian Drug Manufacturers Association, the total Canadian pharmaceutical market in 2001 reached \$11.2 billion. Since 1990, spending on R&D has increased seven-fold, and CDMA-member companies have targeted more than \$1 billion for R&D over the next five years.

A better understanding of the characteristics and behaviour of this highly R&D-dependent industry, as well as the aids and obstacles to its growth, will shed light on the causes of its success. This article focuses primarily on how pharmaceutical production is distributed, how this industry differs from other manufacturing industries and what factors favour its long-term growth.

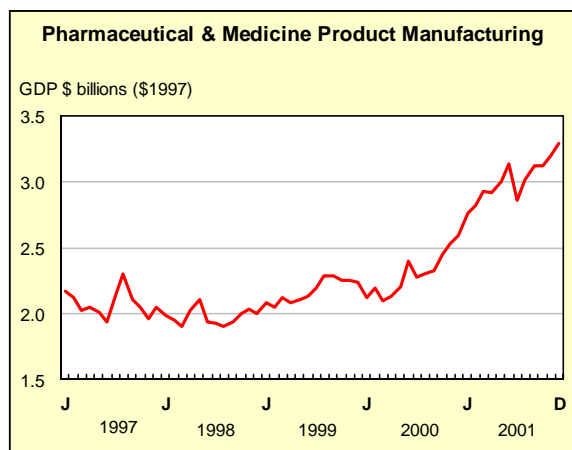

### A flourishing industry

The pharmaceutical industry is extremely concentrated: nine companies alone accounted for 68% of total shipments in 2001, according to Statistics Canada's Monthly Survey of Manufacturing. These firms are multinational corporations, whose head offices in most cases are located in the United States or Europe.

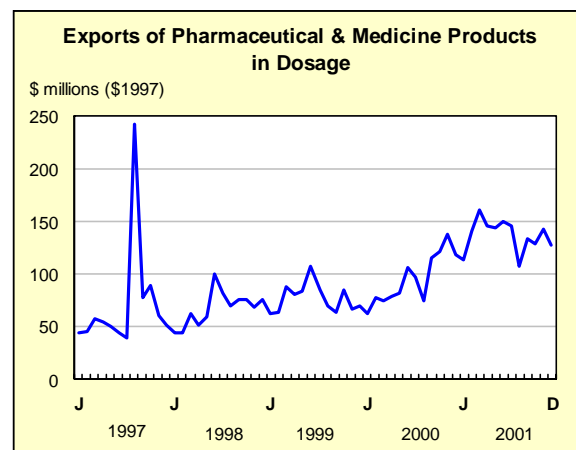

The remaining portion of the industry's output is distributed amongst a myriad of dynamic small businesses that generally occupy a specialized niche not occupied by the large multinationals, such as diagnostic kits or artificial substitutes. They often work in collaboration with universities.

The gross domestic product of the pharmaceutical industry rose at more than twice the pace of the total economy between 1997 and 2001. Net output increased 45% from \$2 billion to \$3 billion, while total economic output rose 16% from \$817 billion to \$947 billion.

Exports of pre-measured pharmaceutical and medicinal products, primarily destined for the United States, followed the same trend as production, more than doubling during this five-year period.

## An industry concentrated in Ontario and Quebec

In 2001, the pharmaceutical industry accounted for about 1.2% of all jobs in manufacturing. About 24,000 people worked in this industry in 2001, compared with 19,900 in 1997. During this five-year period, employment in the pharmaceutical sector rose 22%, compared with 9% for the economy as a whole.

These jobs were located primarily in two provinces: Ontario and Quebec. In 2001, companies in Ontario employed about 12,000 people, or 50% of the total. Companies in Quebec employed around 8,700, or 37% of the total. Quebec's share has decreased slightly since 1997 when it accounted for 41% of employment in the pharmaceutical industry nationwide.

Although they do not have comparable levels of production, Nova Scotia, Saskatchewan and British Columbia saw a significant increase in employment in this field.

In 2000<sup>1</sup>, Ontario, which accounted for half the jobs in the pharmaceutical industry, recorded 44% of all Canadian R&D expenditures. Quebec, with 37% of employment, accounted for 42%. Ontario's ratio of R&D to employment in this industry is lower because the large "generic drugs" producers are in Ontario.

## Best sellers show strong growth

Of the drugs produced by the nine largest drug companies in Canada, some big sellers are those used against cholesterol, diabetes, rheumatism and osteoporosis. Other best-selling products include limited-spectrum drugs, which target a specific behaviour of a particular disease, such as immunostimulants or products used in chemotherapy.

According to the Patented Medicine Prices Review Board (PMPRB), in 2000 these best-sellers accounted for the strongest growth in sales of patented drugs<sup>2</sup>.

In return for freer access to patents in 1987, Canadian drug research companies made a commitment to increase their spending in research to 10% of sales by 1996. This commitment appears to have had an impact on production since companies with a previous strong R&D orientation contributed significantly to the recent increase in production.

## Pharmaceutical R&D: long, costly and risky

The pharmaceutical industry is one of the most innovative industries in Canada.

Although the industry produced 1.9% of manufacturing GDP in 2001, it accounted for 8% of the total manufacturing spending in R&D, according to the Survey on Research and Development in Canadian Industry. Moreover, in twenty years, their pace of growth was triple than that of total manufacturing.

The innovators in this industry do so mostly to develop new products. The most frequent answer given by the pharmaceutical industry to the question, "Why do you innovate?" asked in the 1999 Survey of Innovation<sup>3</sup>, was "to extend product range". For manufacturing industries in general, the most frequently cited reason was "to improve product quality".

Yet pharmaceutical research is a relatively long process. For almost 3% of innovators in the overall manufacturing sector, more than 61 months elapsed between the idea and the finished product. This was the case with more than 20% of innovators in the pharmaceutical industry.

This is corroborated by the research by the Boston Consulting Group (BCG)<sup>4</sup>, which found that the process of developing a drug in the United States takes 15 years of research and costs an average of US\$880 million. The increase in production in 1997 may thus be explained in part by the increased R&D efforts since 1987.

Drug research also appears to be going through a period of great uncertainty. According to the Survey of Innovation, a large proportion of innovation projects are uncompleted or unsuccessful. Some 70% of innovators in the pharmaceutical industry reported having at least one uncompleted or aborted project between 1997 and 1999.

This put the industry in third place for the most uncertain research, after the communications equipment industry (76%) and the semiconductors and other electronic components industry (74%). This is also corroborated by BCG, which estimated that three-fourths of R&D expenditures undertaken each year go to drugs that will never reach the market.

<sup>3</sup> Survey of Innovation 1999, Statistics Canada

<sup>4</sup> Boston Consulting Group, A revolution in R&D: The Impact of Genomics, BCG Focus, June 2001:3

The discovery of new drugs ends with several clinical trials that are also expensive, long and uncertain. However, it is no surprise that the industry considers the heavy regulations and the high cost of development as the major barriers to innovate. For innovators in general, the most frequently named obstacle to innovate was the lack of staff to assign at development projects, following by the cost of development.

**R&D: emphasis on teamwork and training**

As a direct consequence of R&D expenditures, 81% of companies in the pharmaceutical industry conducted training, compared with 69% in manufacturing as a whole.

Because of the emphasis on R&D as well as the length of the project and the uncertainty surrounding the results, there was a tendency to form multidisciplinary teams within the research environment. The Survey of Innovation showed that 70% of drug companies rated the importance of creating teams of employees with different skills as moderately high to high, compared with 54% for manufacturing industries in general.

The time and the financial effort devoted to developing a product led the pharmaceutical industry to collaborate closely with other firms, government research institutes, universities and hospitals to keep costs to a minimum. Nearly twice as many innovative companies in the pharmaceutical industry have collaborated with other firms than in the manufacturing sector as a whole.

The main reasons given by the pharmaceutical industry for collaborating are to share costs and spread risk. For manufacturing industries in general, the main concern appears to be access to knowledge and new markets. Concentrating research in a separate unit also seems to be a widespread practice. About 81% of innovative establishments in the pharmaceutical industry reported having a separate research department, compared with 45% for innovators in the manufacturing sector as a whole.

**Innovators' reasons for co-operating\***

Manufacturing sector as a whole	Pharmaceutical industry
Access critical expertise ..... 55%	Share costs ..... 62%
Access R&D ..... 52%	Access R&D ..... 62%
Access new markets ..... 45%	Spread risk ..... 56%
Share costs ..... 42%	Access critical expertise ..... 56%

\*Among the 33% and 61% respectively of innovators in these two categories who reported co-operating.

Splitting the research process is another favoured strategy. The clinical trials phase, for example, can be contracted out to a research centre or hospital. While most research is carried out by the companies themselves, between 1997 and 2001 there was a substantial increase in contracts awarded to government research institutes, individuals or private clinics<sup>5</sup>.

**Powerful trends signal dynamic growth prospects**

Several powerful trends are working in favour of dynamic growth in production for Canada's pharmaceutical and medicine manufacturing industry.

<sup>5</sup> PMPRB, op. cit.

The population is ageing. According to the 2001 Census, the proportion of the population over the age of 55 rose from 18% in 1980 to 22% in 2001. With the extension of life expectancy, ailments related to lifestyles and old age will become increasingly common in North American society, stimulating the demand for new drugs and, thus, for basic and applied research. The proportion of expenditures on pharmaceuticals compared to total personnel expenditures increased significantly during our reference period<sup>6</sup>.

According to the PMPRB, sales of patented drugs in relation to sales of non-patented drugs rose from just under 50% in 1990 to 72% in 2000. On the other hand, the price of patented drugs increased less rapidly than that of non-patented drugs<sup>7</sup>. In addition, the commitment made by drug companies in 1987 to conduct research and development is only beginning to bear fruit, owing to the sizable time lag between the initial spending and the marketed product.

In addition, among the companies that saw their production rise sharply between 1997 and 2001, a large proportion have a very high R&D-to-sales ratio compared with the average for this industry; a pattern that bodes well for the future.

Conversely, some companies with little current production have spent massively in R&D, indicating real optimism regarding future production<sup>8</sup>. Furthermore, some leading companies in this field are devoting a fairly sizable portion of their total R&D spending to biotechnology, which should enhance their future prospects.

Another long-term advantage is the close ties between companies and academic institutions in this field, creating a critical mass of specialized manpower, especially in Toronto and Montreal. And according to the Survey of Innovation, the pharmaceutical industry has not suffered from labour shortages.

Considering the high level of job specialization in this industry, this finding also sounds a note of optimism for the future.
