### Note of appreciation

*Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.*

## Symbols

The following standard symbols are used in Statistics Canada publications:

.	not available for any reference period
..	not available for a specific reference period
...	not applicable
0	true zero or a value rounded to zero
0 <sup>s</sup>	value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
P	preliminary

### Revisions

This release of monthly GDP by industry incorporates the revised 2001 and new 2002 input-output annual benchmarks, revised data sources and improved methodologies resulting in revisions to the monthly series back to January 2000.

### Conversion to NAICS 2002

In the near future, the monthly GDP by industry program will convert to the 2002 North American Industrial Classification System (NAICS) from NAICS 1997. This conversion will bring minor changes to the current classification, affecting only a few industries. Together with the conversion to NAICS 2002, it is planned to make some changes to the industry detail published. The goal is to reduce the number of industries whose contribution to total economic activity is less relevant, and to increase the detail provided for those that have become more important, such as some of the service industries. With these changes, the monthly GDP program will better reflect the current structure of the Canadian economy. More detailed information on these planned changes will appear soon.

### Note to users

The monthly gross domestic product (GDP) by industry data are expressed in chained dollars with 1997 as reference year. This means that the estimates for each industry and aggregate are obtained from a chained volume index multiplied by the industry's value added in 1997. For the period 1997 to 2002, the monthly estimates are benchmarked to annually chained Fisher volume indexes of real GDP obtained from the constant price input-output tables. For the period starting with January 2003, the estimates are derived by chaining a Laspeyres volume index at 2002 prices to the prior period. This makes the monthly GDP by industry estimates more comparable with the expenditure-based GDP data, chained quarterly. For more information, see the [Chain Fisher Volume Index](#) page on our Web site.

## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

# Highlights

## July 2005

The Canadian economy advanced 0.2% in July following a 0.3% increase in June. Growth in July was concentrated in mining, oil and gas extraction and exploration, retail trade, and transportation industries. The oil and gas industry was spurred by a further increase in already high oil prices. However, economic activity was hampered by declines in manufacturing, wholesale trade and utilities.

Industrial production (the output of mines, utilities and factories) increased 0.3% in July. Declines in manufacturing (-0.3%) and utilities (-2.5%) were more than offset by a 3.6% surge in the mining, oil and gas extraction sector, where high crude oil prices coupled with the end of a labour dispute helped push the growth. Electricity generation contracted 3.1% following a 4.1% increase in June, boosted by a heat wave in Central Canada. In the United States, the index of industrial production increased 0.1% on the strength of manufacturing and utilities, while output of mining receded.

### Mining as well as oil and gas exploration and extraction bounce back

Output of the mining, oil and gas extraction sector increased on the strength of oil and gas extraction and exploration, and the resolution of a labour dispute in the iron ore mines. Oil and gas exploration bounced back 20% from a 14% drop in June caused by unfavourable weather conditions. Light crude oil prices rose a further 3.2% in July, after increasing 12% in June.

Oil and gas extraction advanced 1.0% despite a drop in the tar sands area attributable to maintenance work. On the East Coast, despite persistent problems with the gas compression systems over the last six months, the output of conventional oil gained much of the ground lost in June. Overall, there were increases in the production of both conventional oil and natural gas.

Mining excluding oil and gas extraction gained 3.7% on the strength of iron ore production. The end of a labour dispute in June helped propel iron ore extraction to a level not seen since the last quarter of 2000. Output of non-metallic minerals (which include diamonds and potash) decreased 2.1%.

**Auto makers’ incentives help sustain retail and wholesale trade**

With the special incentive programs by auto makers extended through the summer, new motor vehicle dealers enjoyed a second consecutive month of brisk sales. The retail trade sector gained 1.2% largely on that strength, as retailing activities excluding motor vehicles edged up 0.4% with the largest gain recorded by supermarkets.

Wholesale trade activity declined 1.4% in July, dragged down by reduced sales of computers and other electronic equipment, lumber and millwork, personal and household products and oil products. The largest gain was recorded by wholesalers of motor vehicles.

**Construction activity declines for a second consecutive month**

Construction activity eased back 0.1% in July. Residential construction declined 0.6%. Housing starts remained strong, however, with much of the growth in multi-units residential buildings in urban areas, mainly in Quebec and British Columbia, while losing some ground in Ontario.

Non-residential building construction advanced 0.3% with increasing activity on institutional and commercial buildings, but industrial building edging down.

## **Manufacturing declines for a second consecutive month**

Manufacturing output declined 0.3% in July, with 14 of the 21 major groups, accounting for 60% of this sector's output, recording decreases. The largest declines were recorded by manufacturers of fabricated metal products (-2.4%) and of plastic and rubber products (-2.6%). The largest gains were posted by manufacturers of transportation equipment (+0.7%), chemical products (+1.4%) and beverage and tobacco products (+3.8%).

## **Transportation grows despite strike activities**

Transportation and warehousing gained 0.4%. Water transportation dropped markedly (-7.8%) as a result of strike activities on the West Coast, but was overshadowed by growth in rail and truck transportation industries. Air transportation decreased 0.3% as the number of international travellers for one or more nights by plane to Canada, as well as the number of Canadians travelling abroad for more than one night, both declined by 2.0% from June.
