### Revisions

With this release of monthly GDP by industry revisions have been made back to January 2005.

### Conversion to NAICS 2002

In the near future, the monthly GDP by industry program will convert to the 2002 North American Industrial Classification System (NAICS) from NAICS 1997. This conversion will bring minor changes to the current classification, affecting only a few industries. Together with the conversion to NAICS 2002, it is planned to make some changes to the industry detail published. The goal is to reduce the number of industries whose contribution to total economic activity is less relevant, and to increase the detail provided for those that have become more important, such as some of the service industries. With these changes, the monthly GDP program will better reflect the current structure of the Canadian economy. More detailed information on these planned changes will appear soon.

### Note to users

The monthly gross domestic product (GDP) by industry data are expressed in chained dollars with 1997 as reference year. This means that the estimates for each industry and aggregate are obtained from a chained volume index multiplied by the industry's value added in 1997. For the period 1997 to 2002, the monthly estimates are benchmarked to annually chained Fisher volume indexes of real GDP obtained from the constant price input-output tables. For the period starting with January 2003, the estimates are derived by chaining a Laspeyres volume index at 2002 prices to the prior period. This makes the monthly GDP by industry estimates more comparable with the expenditure-based GDP data, chained quarterly. For more information, see the [Chain Fisher Volume Index](#) page on our Web site.

## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

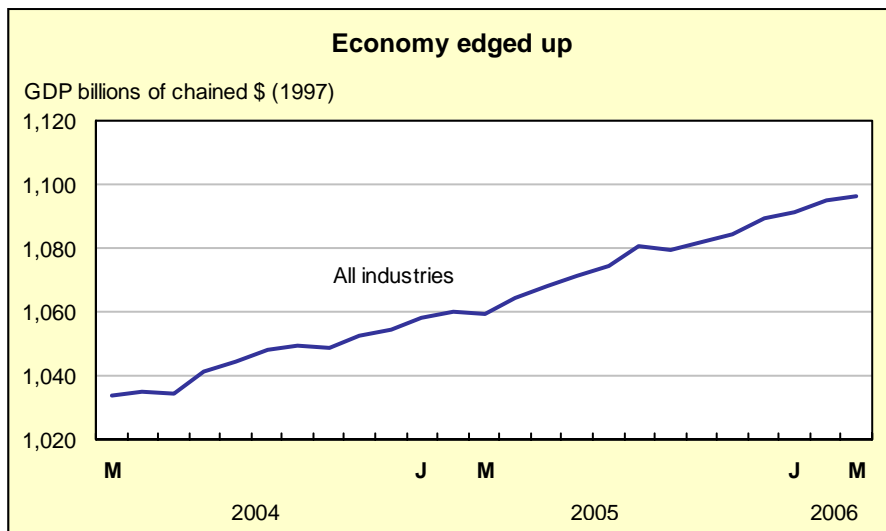

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

# Highlights

## March 2006

The Canadian economy edged up 0.1% in March, after rising 0.3% in February and 0.2% in January. In March, growth in service-producing industries (+0.3%) more than offset a decline in the production of goods (-0.2%).

Growth was chiefly constrained by industries related to motor vehicles. Hence, despite a sharp rise in retail sales, the output of manufacturers and wholesalers of new motor vehicles declined sharply, mostly because of lower foreign demand. In other sectors, a substantial rise in oil and gas exploration, a small gain in oil and gas extraction, together with an increase in accommodation and food services activities, were all partly offset by reductions in residential construction, utilities, and by work stoppages in Ontario colleges.

### New motor vehicle dealers increase their sales while wholesalers record a decline

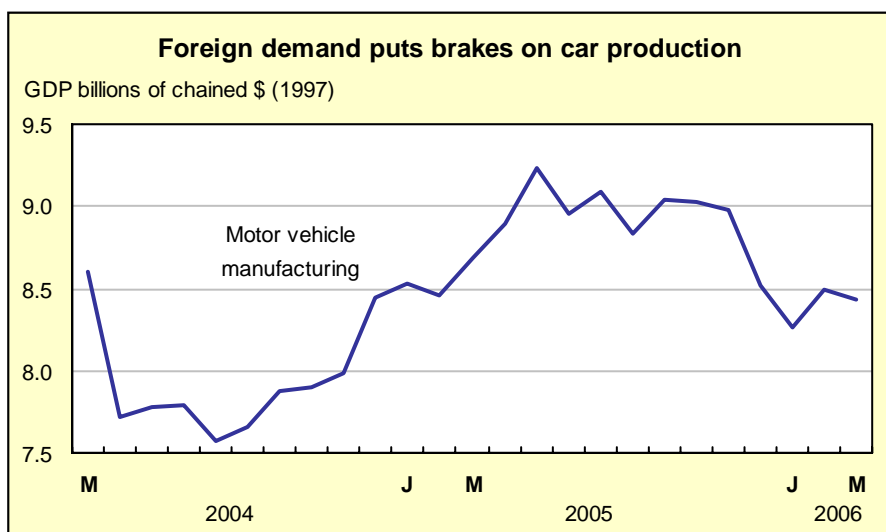

Despite a remarkable showing for retail sales, wholesalers of new motor vehicles were affected by weak U.S. demand in March.

While most retailers recorded increased activities, new car dealers contributed the most to the 1.2% rise in retail output. Excluding new motor vehicle dealers, retail trade advanced 0.4%, mainly on the strength of home centres, hardware stores, and used and recreational motor vehicle and parts dealers.

Wholesale trade activities stayed unchanged in March. A reduction in U.S. demand for motor vehicles resulted in a steep drop in the activities of new motor vehicle wholesalers and in exports. This setback was offset by the strong showing of wholesalers of machinery and electronic equipment (including computers), and of household and personal products.

### Lower U.S. demand impacts motor vehicle manufacturing

Manufacturing output retreated 0.4% in March. Eleven of the 21 major groups, accounting for 54% of total manufacturing output, declined. Despite a marked increase for light trucks, a drop in U.S. demand led to a decrease in exports of all makes of cars made in Canada. As a result, motor vehicle manufacturing fell sharply, and durable goods production declined 0.5%.

Gains were however recorded in the production of machinery and of fabricated metal products. Overall production of non-durable goods declined 0.3%. Decreased production of beverages and tobacco products, and lower printing activities were only partly offset by gains in chemical products and clothing.

## Residential construction down sharply

Construction activities declined 0.6% in March after growing steadily for 20 months. Residential construction declined 2.2%, wiping out its previous month gain. Non-residential construction rose 0.6%. All types of non-residential buildings (industrial, commercial and institutional) advanced. The value of non-residential construction permits increased substantially owing to new institutional projects. Engineering, repair and other construction activities also grew 0.2%, led by construction in Western Canada.

## Stock market activity supports growth in the financial sector

For a third consecutive month, buoyant stock markets contributed to the growth of the financial sector. Stockbrokers' activity had a strong showing (+1.2%), helping the financial sector to grow 0.3%. By contrast, after two months of robust increases, real estate brokers recorded a 1.6% decline, reflecting the home resale market.

## Growth in the energy sector

Building on its previous month's strength, the energy sector advanced again in March (+1.1%). This gain has been largely attributable to a marked increase in oil and gas exploration (+13%), and to a rise in oil and gas extraction (+0.2%) after two consecutive monthly declines. Despite the end of maintenance work on the East Coast, there was a decline in crude petroleum extraction which was more than offset by natural gas extraction. Electricity generation and transmission decreased 0.7%.

Aside from activities related to energy resources, mining fell sharply (-4.6%). For a fourth consecutive month, potash production declined substantially pending the renewal of supply contracts.

## A small decrease in industrial production

Industrial production (the output of factories, mines and utilities) edged down 0.1% in March. The 1.2% increase in mining activity (including oil and gas extraction) was more than offset by the reduction in manufacturing and utilities output. In the United States, industrial production rose 0.6%, with mining, utilities and manufacturing all registering gains.

## Other industries

A work stoppage in Ontario colleges led to a 0.6% drop in education services. An increase in the number of travellers staying for one night or more, both from the United States and from overseas, contributed to rise the output of many tourism-related industries, including air transportation (+1.4%) and accommodation and food services (+1.0%).

## First quarter 2006

Much of the growth of the Canadian economy in the first quarter of 2006 stemmed from wholesale and retail trade, the financial sector and construction activities. Industrial production (utilities, the mining sector and manufacturing) however retreated. The advance in service-producing industries (+1.1%) largely overtook that of goods-producing industries (+0.2%).

Retail trade grew 2.0%, boosted by an upswing in most types of stores, with the exception of supermarkets, service stations and computer stores. Wholesale trade continued to grow at a robust pace (+2.9%). Wholesalers of new motor vehicles and of machinery and electronic equipment contributed substantially to the increase, while wholesalers of apparel and petroleum products registered declines.

Buoyant stock markets contributed to a 1.1% rise in the financial sector in the first quarter. Stockbroking activities increased 3.5% during this period. Other financial activities also showed strength.

Construction advanced 2.3% in the first quarter, continuing the ever faster pace that started in the second quarter of 2004. Strength came from all types of construction projects, residential, non-residential, and engineering and repairs. Real estate agents and brokers saw their activities increased 2.4% during the quarter.

The 0.3% drop in industrial production in the first quarter resulted from a 1.2% decline in the mining, oil and gas extraction sector, and from a 1.6% decrease in utilities, while manufacturing output grew marginally (+0.1%). Some of the key factors explaining this overall situation include the effect of milder weather on the demand for electricity and natural gas, unscheduled maintenance on oil extraction sites, the appreciation of the Canadian dollar, as well as ongoing export contracts negotiations for various mineral products.
