Ordering and subscription information

This product, Catalogue no. 15-201-XIE, is published quarterly in electronic format on the Statistics Canada Internet site at a price of CDN \$54.00. To obtain single issues, visit our Web site at **www.statcan.ca**, and select Products and Services.

This product is also available in print through a Print-on-Demand service, at a price of CDN \$81.00. The following additional shipping charges apply for delivery outside Canada:

	Single issue
United States	CDN \$6.00
Other countries	CDN \$10.00

All prices exclude sales taxes.

The printed version can be ordered by

- Phone (Canada and United States) **1 800 267-6677**
- Fax (Canada and United States) **1 877 287-4369**
- E-mail **order@statcan.ca**

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at factor cost as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the Euro-pean Communities, International Monetary Fund, Organization for Economic Co-operation and development, United Nations and World Bank.

Overview

What's new in this publication

This publication is the second issue of *Input-Output Structure of the Canadian Economy*, Cat. 15-201-XIE in its electronic version. Noticeable features are:

- **Improved data quality**
Statistics Canada undertook a massive project to improve its provincial economic statistics in 1996. Using sub-national surveys and other improved sources, the reliability of statistics published here is substantially improved and is approximately equal across provinces.
- **Provincial input-output tables**
Beginning with reference year 1997, input-output tables are compiled and published annually in this catalogue for each province and territory of Canada. Sub-national tables sum to the national tables for Canada. The accounting framework and concepts of these tables are identical to the national tables that date back to the 1961 reference year. We also refer in the text to exports and imports between provinces as well as abroad. To have access to the interprovincial trade data please consult the following table in CANSIM II: Table -386-0002.
- **NAICS**
In the new input-output tables industries are classified by the North American Industry Classification (NAICS), rather than the 1980 Standard Industrial Classification (SIC), to be consistent with Statistics Canada's adoption of NAICS. This has led to changes in the detail and presentation of goods and services.
- **Valuation of industry GDP**
The valuation of industry gross domestic product has changed from factor cost to basic price, in accordance with conventions recommended by the United Nations report, System of National Accounts, 1993. Under the old valuation, industry gross domestic product was calculated to include the returns to labour and capital only, excluding taxes or production subsidies. The new valuation of industry GDP is basic prices which includes Other Taxes on Production and Other Subsidies on Production. Data on gross output is at modified basic price, because production data show prices actually received by producers thus reflecting the effect of subsidies on products.
- **Refinements to the 1993 SNA conventions**
A number of refinements to the adopted recommendations were implemented affecting the treatment of specific transactions or industries.

Annual Provincial Input-Output Tables

With this publication, Statistics Canada is providing input-output (IO) accounts for all provinces and territories of Canada on an annual basis starting with the year 1997. Until recently, annual publication of input-output accounts were limited to the national economy. These accounts are the most comprehensive and detailed statistics on transactions involving production activity and intermediate as well as final consumption of goods and services in the economy. The accounts are prepared at the Worksheet level of detail, consisting of 300 industries, 727 groups of goods and services (commodities), and 170 categories of final users. There are three more compact versions of the tables that are usually available to the public: the Link, the Medium and the Small aggregation tables. The most compact presentation of IO accounts, the Small IO tables, are provided in this release.

A Quick Guide to the IO Accounts

What are Input, Output and Final Demand Tables

The input-output accounts of Canada and its provinces and territories are presented in three main data tables (matrices) for each jurisdiction. These are the output table, input table, and the final demand table. In addition, provinces' and territories' tables are linked together through an interprovincial flows table that shows each jurisdiction's exports to, and imports from, other provinces and territories as well as abroad. These tables are compiled every year by Statistics Canada using newly instituted surveys and other improved sources that are designed to collect reliable statistics from each jurisdiction. The tables are part of the Canadian System of National Accounts (CSNA). The CSNA is a system of integrated statistical accounts consisting of four components: input-output tables, income and expenditure account (national and provincial), balance of payments and international position, and environment accounts. This system is "integrated" in the sense that all of the data belonging to this system are consistent with one another. IO tables cover all economic activities conducted in the market economies of each province and territory, encompassing persons, businesses, government and non-governmental (non-profit) organizations, and entities outside its jurisdiction that give rise to imports or exports (interprovincially or internationally).

To compile the IO accounts, Input-Output Division obtains source data from all relevant surveys as well as administrative sources such as tax records, professional and industry organizations, and non-government institutions every year for each province and territory. In the process of preparing statistical estimates, data from various sources are confronted, analysed by subject-matter experts, and used to compile

estimates that are consistent with all other estimates in the System and provide a valid and coherent statistical picture of the subject matter. Consistency is a key feature of the statistics produced by the Accounts. It is highly valuable to the user because data taken from the Accounts do not disagree with each other or provide contradictory information. When various data bearing on the same subject do not provide a consistent picture, the user is left in the position of either reconciling inconsistencies without the benefit of necessary information, or discarding the data for lack of realism or credibility. A good example of how consistency is achieved through data integration is a process known as “commodity balancing”. Because, logically, the supply of a good or service from all possible sources must equal its demand or disposition in a given jurisdiction, every good and service in the economy is scrutinized to make sure it obeys this rule before it is used for IO compilation. When supply does not add up to demand or disposition (demand plus inventory), as is often the case¹, each data source is questioned, errors and omissions are corrected, and sometimes the data is re-estimated in light of more reliable information to achieve complete balance between supply and disposition.

What IO tables show

The tables are set up on a year-by-year basis, rather than in time series. Tables for Canada (the national tables) date back to 1961, while regular sub-national tables began with the 1996 reference year. The tables identify transactions in three ways:

1. they show data by *commodity*, a neutral terminology for a group of goods or services or type of transactions (e.g., “wages” or “indirect taxes”); The most detailed tables, the Worksheet tables, groups all transactions into 727 commodities. Tables that are published electronically—known as the “Small” tables—compact this detail into 57 commodities.
2. they show data by *industry*: a group of producing units, such as establishments or enterprises, that are engaged in market transactions in goods or services. The term “industry” does not imply that they are industrial businesses. The terminology covers all entities that conduct activities involving market transactions. The concept includes such groups as Municipal Governments, non-profit institutions such as Sports and Recreation Clubs, and professions such as Offices of dentists. The Small tables published here show 25 very aggregate industries but, at the most detailed (Worksheet) level, the tables are made up of 300 industries. For the provinces, the territories and for Canada the inputs and the outputs tables show the data for 727 goods and services produced (for the output) or used (for the inputs) for each of the 300 industries;
3. they show data by categories of *final demand*, a convenient breakdown that identifies transactions that constitute final sales of goods and services.

The Final Demand Table

This table shows transactions in goods and services, in a province or territory, that are for *final* use. A transaction is for final use when the good or service is exported, when it is bought for final consumption (i.e., it is not used to produce other goods and services for the market), or as capital investment. While all purchases by households (persons) are considered final consumption in the System, businesses, governments, and other entities make purchases both as intermediate and as final expenditure. Their intermediate expenditures are shown in the Input (or Intermediate Use) table and their final expenditures are shown in the Final Demand table. For instance, when a retail store pays for electricity, it is shown as payment from Retail Trade industry (Input table) and as output for Electric Power industry (Output table). However, when the same store buys payment processing machinery, the payment is shown in the Final Demand table as investment by the Retail Trade industry and also either an output of the relevant Canadian industry, as an import, or as a withdrawal from inventories of the particular machinery. Imports are also shown in the Final Demand table.

In this publication, the Final Demand table is shown with a breakdown of 13 categories, but at the most detailed level, IO tables are compiled with a breakdown of 170 categories. Regardless of the level of detail, Final Demand tables always distinguish the following broad categories:

- 1) Personal Expenditure of households², 2) Capital investment by persons, governments and non-profit entities (separately for Construction investment and Machinery and Equipment investment), 3) Current expenditures of governments, 4) Additions to or withdrawals from inventories (withdrawals are shown as negative values), 5) Exports to other provinces, 6) Imports from other provinces, 7) International exports of a province or territory and, 8) International imports of a province or territory. In the most detailed table these categories are presented with the 727 commodity detail, but are only shown with the more compact 57 commodity detail in this release. Some of these expenditures are presented with a useful breakdown. For instance, Personal Expenditure presented in this release is broken down into durable goods, semi-durable goods, non-durable goods, and services. In the most detailed table, final demand is presented with 170 categories, of which personal expenditure is shown for 52 categories.

¹ Statistics are often prepared according to different concepts. They are also evaluated on a different basis or cover slightly different periods, i.e. fiscal versus calendar year.

² This includes personal spending by residents of a province, whether spent in their own or another province or territory or country while visiting. It also includes the full value of capital equipment under finance leases acquired by individuals (e.g., automobiles). Personal expenditure is higher than actual (cash) spending because of a number of national accounting imputations. These are: an imputation for services (rental value) of owner-occupied dwellings, an imputation for interest payments to financial institutions net of interest income from the same source, an imputation for the investment income of insurance carriers and for changes in their actuarial reserves when related to persons net of insurance claims.

The Input Table

The input table, also known as the Intermediate Use table, is where purchases that relate to production (current expenses) are presented for groups of producing units (industries). It was noted earlier that, in the context of input-output accounts, “industry” also refers to entities such as governments, non-profit organizations, professions, and so on. In these cases, inputs refer to their current (i.e., non-capital) expenditure on goods and services. The input table includes a few other entries that businesses would report on the expense side of their income statement. These are: Indirect Taxes on Production (e.g., property taxes), Indirect Taxes on Products (e.g., sales taxes), Subsidies on Products, Subsidies on Production (e.g., manpower training subsidies), Wages and Salaries, Supplementary Labour Income (e.g., employers’ contribution to employment insurance), Mixed Income (e.g., income of unincorporated businesses), and Other Operating Surplus. The latter item is the income or loss that is left over after accounting for the cost of all intermediate inputs and the items just discussed. This ensures that the sub total of inputs for a given industry is equal to its “outputs” (discussed below) and an accounting identity is maintained between inputs and outputs of industries. The most detailed input table for a province shows up to 727 goods and services used for each of 300 industries. The current release shows a more compact table with 25 industries and 57 goods and services.

Gross Domestic Product

The eight cost entries found in the input table (see previous paragraph) contain all the data one needs to calculate the Gross Domestic Product (GDP) of each industry in a province. GDP at basic prices—the statistic officially published by Statistics Canada—is obtained by adding the last six components. GDP at market prices is the sum of all eight cost components. Using this data, we one can calculate the GDP of a province or territory, GDP of the whole Canadian economy, showing either the provincial or the industrial composition of GDP across Canada.

The Output Table

The Output table, also known as the Make table, is where the values of production of good and services are recorded for each producing industry in a given jurisdiction (e.g., a province). Once again, the term “industry” is comprehensive, covering all entities except households (persons).

In most cases, production or output of an industry is simply their sales or shipments³. Production, of course, excludes used goods, because they were already counted as production in an earlier period. For retailers and wholesalers, production is considered to be the value they add to (or the margin they earn from) the products they sell, rather than the total receipt from their sales. For owners of real property, production is gross rent receipts, except for residential properties occupied by their owners where an imputation is made for the equivalent rental value of living in the property.

For banking and similar services, the net interest income of the institutions is considered production. Where they charge fees for their services, they are also considered output. The production of insurance carriers consists of premiums net of claims and adjustment expenses, plus incomes earned on invested reserves as well as rental income, plus changes in actuarial reserves. For construction, the value of work that has been put in place in a particular jurisdiction is considered output, whether this is done by hired contractors or by the industry (e.g. electric power) on its own account⁴. For holding companies, non-profit institutions (e.g., churches, clubs), the central bank and general government, the value of their output is computed as the sum of operating expenses, labour compensation and depreciation of fixed capital. Hospitals, schools, universities and other institutions that are funded by governments but also earn operating revenues have an additional output equal to their revenues from sales of goods and services. The output table (Small) included in this release shows 25 industries producing 57 commodities. At the most detailed level, the output table shows 300 industries and 727 goods and services for a province, territory, or the Canadian economy.

³ Production also includes what is produced in a year but not sold (added to inventories), excludes sales out of inventories (and gains or losses from changes in inventory values), and includes own-use (e.g., feed corn grown by farmers for their own livestock).

⁴ This means that construction “industry” covers the entire activity, rather than only the work of entities working in the construction industry.

Using Provincial IO Tables: The Automobile Market

There is a complex of industries connected to automobile production in Canada. They include auto dealerships and auto parts makers that together make up a major component of the Canadian economy. They are modern and highly competitive industries that account for considerable trade between Canada and the United States and offer tens of thousands of high quality jobs, mostly in Central Canada. But, despite a high profile, the industry has been difficult to explore and analyze because no regional database existed that would bring together production, consumption and trade on the many aspects of the industry and present them in a consistent form. The newly published provincial IO accounts promises to reduce this gap, providing a statistical map of auto-related activities across markets and provinces that can bring to focus any aspect of the industry at will. The database consists of the four provincial data tables that make up the IO accounts: Final Demand, Input, Output and the Interprovincial Trade Flow tables. The following discussion illustrates how these tables can be used to reveal intricate multi-provincial market structures, industry structures and the flow of products across provinces, user, and abroad.

The Final Demand table (using the 1999 Worksheet level) depicts the interprovincial market structure for three automobile products: 1) Automobiles Excluding Passenger Vans, 2) Passenger Vans, and 3) Trucks, Road Tractors and Chassis. The latter include both sport utility vehicles (SUV's) and light trucks. Looking at the most detailed version of these tables, we find that households spent about \$29 billion on these products in Canada⁵. The table's provincial breakdown shows that about 24 percent of the purchases took place in Quebec, 43 percent in Ontario, 11 percent in Alberta, 10 percent in British Columbia. Ontario shows a much greater propensity to buy autos and trucks as capital equipment rather than as consumer items in 1999, accounting for 48 percent of the \$17 billion spent nationally. In other provinces, investment shares were about the same or smaller than their consumption shares of the national total.

The producer price Final Demand table presents a different angle of the auto market by showing the elements that make up the final price paid for auto's and trucks. It shows that about 72 percent of personal expenditure on auto's and trucks, or about \$21 billion, was on the product itself and the rest consisted of the retailing, wholesaling, and the transportation costs (margins) that are included in the final or "purchaser price" that consumers actually pay. For new automobiles and trucks, the wholesale and retail margin represent that proportion of the purchase price that compensates automobile dealers (independent as well as manufacturer-owned entities), whereas the transportation margin identifies the costs of transporting the product to the location of the consumer. The table shows separately a tax margin for these products, that is the combined provincial, federal (Goods and

Services) sales taxes as well as excise taxes that are built into the retail price, and special taxes such as the gas guzzler tax. These taxes accounted for about 10 percent of spending on automobiles and trucks by the consumer. The breakdowns vary somewhat among the provinces and territories.

The producer price table is absolutely vital if we want to compare our trade in auto's with other data such as domestic spending or investment, because the table strip out the goods from the margins and taxes that come with them, so all transactions are comparable across the whole economy. Nationally, we spent about \$21 billion on auto's and trucks (products only), and another \$12 billion was bought as capital investment, so our domestic demand is about \$33 billion. But our plants produced \$76 billion of auto's and trucks and we imported about \$29 billion, giving us a market size of \$105 billion in aggregate. Our exports were \$66 billion, giving us a trade surplus of about \$38 billion. The numbers suggest how heavily export-oriented the industry is: our exports are roughly the size of how much our plants produce. And with our trade surplus amounting to about half of what we produce in Canada, one might say that about half of the activities conducted in Canada go toward meeting foreigners' demands and contribute to our trade surplus. At the same time, imports amount to about 77 percent of domestic demand, making us a significant importer on the international scene.

With provincial IO tables being available now, many interesting dimensions of the automobile market come to light because all of the data on automobiles can now be examined one province at a time. Perhaps the most prominent feature of the automobile market is that, in all provinces, demand is mostly met through international imports rather than imports from producing provinces (Ontario and Quebec). For instance, Alberta's \$3.9 billion in domestic demand was met mostly through \$2.6 billion of imports from abroad. In British Columbia, about \$3.5 billion of the \$3.6 billion domestic demand originated from abroad. Ontario was the only province with a positive balance of trade at about \$51 billion, offsetting trade deficits in all other provinces and territories. These statistics highlight the basic configuration of the auto sector in Canada that is generally known. Because auto plants specialize in one or a few models to take advantage of economies of scale, the Big Three North American auto makers and offshore auto companies only manufacture a few popular models in Canada. Canadians' demand for other models of auto's, SUV's and trucks in all provinces is met through imports, principally from the US. Our exports, therefore, are not only fuelled by the strength of consumer demand in the United States, but are highly sensitive to the popularity (and the product life cycle) of the particular models manufactured in Canada. At the same time, provincial deficits in the auto sector (net imports from abroad) depend very

⁵ Personal expenditure includes the total cost (producer price) of new automobiles and trucks that consumers acquire under financial leases. The tax margin includes only that part of the tax that is paid up as part of the acquisition of the product through finance leasing.

much on which specific models are purchased in a province and whether they are among the few manufactured in Canada or are imported from the US, Japan and Europe.

The production Structure of the auto industry

While the Final Demand table gives us a valuable perspective on how the market for a particular product operates nationally and interprovincially, IO tables are especially adept at revealing the production structure of a production unit such as plants. The Input table shows what materials, products and services plants or establishments of a province or territory use. Effectively, the input table for an industry provides an exhaustive list of their operating expenses for a reference year classified according to defined groups of goods and services used for IO tables. This information becomes a powerful tool when we combine it with the Output and Final Demand tables. These tables taken together show where a product or service comes from, by which industry it was produced and, if imported, which province it was imported from and how much may have come from outside Canada. When a product or service originates in any province within Canada, we can use the tables to see, in a second stage of production, what was used by producers to make that product or service and find answers to the same range of questions for subsequent stages.

In the case of motor vehicles, we look at the Automobile Manufacturing industry at the Worksheet level in both the output and input tables. This industry comprises manufacturing plants whose principal product is automobiles, including trucks (such as SUV's). It is a unique feature of input-output accounts that it can show, for instance, the automobile industry as the last stage in a long chain of domestic and foreign producers of products and services that ultimately become the finished auto or truck. A straightforward use of the IO tables can illuminate each link of that chain so we can see what we need to know about the production structure of the industry.

Looking at the auto industry's inputs, its largest operating expense items are engines and parts, motor vehicle stamping, other parts and accessories, as well as transmission and power train. These components together account for more than half of the industry's expenses before labour and taxes. It employed about 43,000 employees. These are telling statistics, because they indicate the economic interdependence between this industry and producers of components. For instance, in the event of shut down of a plant in Canada amounting to, say, a 10 percent fall in the value of auto's produced here, we can expect a similar decline in the value of orders from producers of stampings, engines, transmission and other parts. In turn, those Canadian plants would reduce their orders for parts and supplies used at their plants, as well as a potential pull back on employment at each stage of the production chain. Using all three tables, the production and imports of any input can be traced back indefinitely. For this illustration, we will follow the production chain ending in Motor Vehicle Stampings industry.

Looking at the final demand table for this product, we see that more than three quarters of the stampings used in auto manufacturing is imported into Canada, while most the of the remainder is manufactured by the Motor Vehicle Metal Stamping Industry that produces stampings as well as significant amounts of other parts and accessories for automobiles with about 22,000 employees. The Trade Flows table shows that auto stampings are predominantly produced and used in Ontario plants. The largest trade flow is between Ontario and Quebec, each amounting to about six percent of domestic output of stampings. The use table shows that by far the largest input used in the production of stampings, accounting for nearly half of its operating expenses, is Flat Iron and Steel used by Ontario producers. Plants in Quebec tend to use specialized stampings that depend heavily on the use of specialized metals such as Ferro-Alloys. In light of this, we can conclude that even though the Trade Flows table shows significant imports of Flat Iron and Steel to Quebec from Ontario, these products are not destined for auto stamping production so they are not related to the chain we are tracing here. We trace Flat Iron and Steel beginning with the (national) final demand table that shows that about 70 percent of the \$9.6 billion supply of this product is from domestic plants employing about 27000 people, mostly by Iron and Steel Mills located in Ontario. The industry produces about \$10 billion of a wide range of iron and steel products. Like the stamping industry, it is rather labour intensive, judging by the share of its wages and salaries in total expenses. The tables show that there are mills in Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, and Alberta. The input table for these mills reveals that the most significant factors of production, and those that would be most affected by a change in the industry's demand for them, are: 1) Steel Ingots and Billets, 2) Iron Ores and Concentrates, and 3) Iron and Steel Scraps. An interesting feature revealed in this part of the input table is that mills in Western Canada are entirely dependent on Iron and Steel Scrap and use no Iron Ores and Concentrates as raw materials, whereas those in Nova Scotia, Quebec, and Ontario make much greater use of Iron Ores, and Iron and Steel Ingots and Billets. In Ontario, for instance, purchases of Iron and Steel Scrap are less than half of their cost of Iron and Steel Ingots and Billets. Mills in the West (and Nova Scotia) are generally not users of coal, but depend heavily on electricity to power their ovens. In Ontario and Quebec, both types of mills operate.

As we continue to trace this chain of inputs and outputs by following where the industry's Steel Ingots and Billets originated from, we find that international imports and exports are roughly the same amount, but that the needs of Ontario mills are met by importing from abroad (Ontario is the largest importer) and from Quebec, while Quebec is the largest exporting province and the largest source of these products to Ontario. Clearly, any change in demand along this chain would disproportionately affect Quebec industries, as it produces more than half of all Steel Ingots and Billets.

The sources of Iron Ore and Concentrates also present an interesting picture of the industries that support auto production. More than half of the product is produced by Iron Ore mines in Quebec and the rest in Newfoundland. Almost the entire production of Newfoundland mines is exported internationally (about 80 percent) and to other provinces, while Quebec exports about 1/3 of its production to Ontario and more than 60 percent of it abroad. Altogether, about 75 percent of domestic production is exported out of Canada, making the industry and its 5,000 employees (most of them in Quebec) more dependant on export demand than on demand by the domestic auto industry. Being a primary industry, its largest operating costs are labour compensation and energy products such as electricity, fuel oil, diesel oil, etc. Finally, a great deal of Iron and Steel Scrap is used by

some mills in the production of Flat Iron and Steel. About half of the supply of Iron and Steel Scrap comes from scrapped cars and machinery and equipment and the remainder mostly from imports. In terms of the impact of an increase in the auto industry, an increase in demand for scrap iron and steel will certainly reduce its supply from all sources, as it would for most products. However, in this case the greatest impact will be on wholesale and transport margins that make up about 45 percent of what purchasers, such as mills, pay for the metal. The ultimate impact of this will be felt on incomes and employment of wholesale trade and transport industries.

Availability of data

1. CANSIM II

a) *Input-Output Tables*

The Input-Output Tables of this publication are stored in CANSIM II at the Small (S) level, Medium (M) level and Link (L) level of aggregation.

b) *Gross Domestic Product at basic price*

The time series of Gross Domestic Product (GDP) at basic price from 1961 to 1999 are also available on CANSIM II at S, M, and L levels of aggregation.

Time series: 1961-1999

Type: hierarchical (S,M,L), current dollars (C\$)

The GDP data are presented in CANSIM II hierarchical format in the order of S, M and L aggregations. The two digits NAICS code represents the S level, the three digits NAICS code denotes the M level and the four digits NAICS code indicates the L level of aggregation.

3251A0 Other basic chemical manufacturing	32518, 32519
3252 Resin, synthetic rubber, and artificial and synthetic fibres and filaments manufacturing	3252
325200 Resin, synthetic rubber, and artificial and synthetic fibres and filaments manufacturing	3252
3253 Pesticides, fertilizer and other agricultural chemical manufacturing	3253
325310 Fertilizer manufacturing	32531
325320 Pesticide and other agricultural chemical manufacturing	32532
3254 Pharmaceutical and medicine manufacturing	3254
325400 Pharmaceutical and medicine manufacturing	3254
325A Miscellaneous chemical product manufacturing	3255, 3256, 3259
325510 Paint and coating manufacturing	32551
325520 Adhesive manufacturing	32552
325610 Soap and cleaning compound manufacturing	32561
325620 Toilet preparation manufacturing	32562
325900 Other chemical product manufacturing	3259
326 Plastics and rubber products manufacturing	326
3261 Plastic product manufacturing	3261
326110 Unsupported plastic film, sheet and bag manufacturing	32611
326120 Plastic pipe, pipe fitting and unsupported profile shape manufacturing	32612
326130 Laminated plastic plate, sheet and shape manufacturing	32613
326160 Plastic bottle manufacturing	32616
3261A0 Polystyrene, urethane and other foam product manufacturing	32614, 32615
326193 Motor vehicle plastic parts manufacturing	326193
32619A Miscellaneous plastic product manufacturing	326191, 326198
3262 Rubber product manufacturing	3262
326210 Tire manufacturing	32621
326220 Rubber and plastic hose and belting manufacturing	32622
326290 Other rubber product manufacturing	32629

For Use With the System of National Accounts, for 1998 Onwards**
Hierarchical classification according to NAICS*

Identification Code and title	NAICS definition
327 Non-metallic mineral product manufacturing	327
3273 Cement and concrete product manufacturing	3273
327310 Cement manufacturing	32731
327320 Ready-mix concrete manufacturing	32732
3273A0 Concrete product manufacturing	32733, 32739
327A Miscellaneous non-metallic mineral product manufacturing	3271, 3272, 3274, 3279
327100 Clay product and refractory manufacturing	3271
327200 Glass and glass product manufacturing	3272
327400 Lime and gypsum product manufacturing	3274
327900 Other non-metallic mineral product manufacturing	3279
331 Primary metal manufacturing	331
3310 Primary metal manufacturing	331
331100 Iron and steel mills and ferro-alloy manufacturing	3311
331210 Iron and steel pipes and tubes manufacturing from purchased steel	33121
331220 Rolling and drawing of purchased steel	33122
331313 Primary production of alumina and aluminium	331313
331317 Aluminium rolling, drawing, extruding and alloying	331317
331410 Non-ferrous metal (except aluminium) smelting and refining	33141
3314A0 Non-ferrous metal (except aluminium) rolling, drawing, extruding and alloying	33142, 33149
331510 Ferrous metal foundries	33151
331520 Non-ferrous metal foundries	33152
332 Fabricated metal products manufacturing	332
3320 Fabricated metal product manufacturing	332
332100 Forging and stamping	3321
332200 Cutlery and hand tool manufacturing	3322
332311 Prefabricated metal building and component manufacturing	332311
33231A All other plate work and fabricated structural product manufacturing	332314, 332319
332320 Ornamental and architectural metal products manufacturing	33232
332410 Power boiler and heat exchanger manufacturing	33241
332420 Metal tank (heavy gauge) manufacturing	33242
332430 Metal can, box and other metal container (light gauge) manufacturing	33243
332500 Hardware manufacturing	3325
332600 Spring and wire product manufacturing	3326
332710 Machine shops	33271
332720 Turned product and screw, nut and bolt manufacturing	33272
332800 Coating, engraving, heat treating and allied activities	3328
332900 Other fabricated metal product manufacturing	3329
333 Machinery manufacturing	333
3330 Machinery manufacturing	333
333110 Agricultural implement manufacturing	33311
333120 Construction machinery manufacturing	33312
333130 Mining and oil and gas field machinery manufacturing	33313
333200 Industrial machinery manufacturing	3332
333300 Commercial and service industry machinery manufacturing	3333
333400 Ventilation, heating, air-conditioning and commercial refrigeration equipment manufacturing	3334
333500 Metalworking machinery manufacturing	3335
333600 Engine, turbine and power transmission equipment manufacturing	3336
333910 Pump and compressor manufacturing	33391
333920 Material handling equipment manufacturing	33392
333990 All other general-purpose machinery manufacturing	33399

Table II

Identification Code and title	NAICS definition
334 Computer and electronic product manufacturing	334
3341 Computer and peripheral equipment manufacturing	3341
334100 Computer and peripheral equipment manufacturing	3341
334A Electronic Product Manufacturing	3342-3346
334210 Telephone apparatus manufacturing	33421
334220 Radio and television broadcasting and wireless communications equipment manufacturing	33422
334290 Other communications equipment manufacturing	33429
334300 Audio and video equipment manufacturing	3343
334400 Semiconductor and other electronic component manufacturing	3344
334500 Navigational, measuring, medical and control instruments manufacturing	3345
334600 Manufacturing and reproducing magnetic and optical media	3346
335 Electrical equipment, appliance and component manufacturing	335
3352 Household appliance manufacturing	3352
335200 Household appliance manufacturing	3352
335A Electrical equipment and component manufacturing	3351, 3353, 3359
335100 Electric lighting equipment manufacturing	3351
335311 Power, distribution and speciality transformers manufacturing	335311
335312 Motor and generator manufacturing	335312
335315 Switchgear and switchboard, and relay and industrial control apparatus manufacturing	335315
335910 Battery manufacturing	33591
335920 Communication and energy wire and cable manufacturing	33592
3359A0 Wiring devices and all other electrical equipment and component manufacturing	33593, 33599
336 Transportation equipment manufacturing	336
3361 Motor vehicle manufacturing	3361
336110 Automobile and light-duty motor vehicle manufacturing	33611
336120 Heavy-duty truck manufacturing	33612
3362 Motor vehicle body and trailer manufacturing	3362
336200 Motor vehicle body and trailer manufacturing	3362
3363 Motor vehicle parts manufacturing	3363
336310 Motor vehicle gasoline engine and engine parts manufacturing	33631
336320 Motor vehicle electrical and electronic equipment manufacturing	33632
336330 Motor vehicle steering and suspension components (except spring) manufacturing	33633
336340 Motor vehicle brake system manufacturing	33634
336350 Motor vehicle transmission and power train parts manufacturing	33635
336360 Motor vehicle seating and interior trim manufacturing	33636
336370 Motor vehicle metal stamping	33637
336390 Other motor vehicle parts manufacturing	33639
3364 Aerospace product and parts manufacturing	3364
336400 Aerospace product and parts manufacturing	3364
3365 Railroad rolling stock manufacturing	3365
336500 Railroad rolling stock manufacturing	3365
3366 Ship and boat building	3366
336611 Ship building and repairing	336611
336612 Boat building	336612
3369 Other transportation equipment manufacturing	3369
336900 Other transportation equipment manufacturing	3369
337 Furniture and related product manufacturing	337
3370 Furniture and related product manufacturing	337
337110 Wood kitchen cabinet and counter top manufacturing	33711
337127 Institutional furniture manufacturing	337127
33712A Household furniture manufacturing	337121, 337123, 337126

* Notes:

The small (S) level industrial categories are expressed by a 2 character identification code
The medium (M) level industrial categories are expressed by a 3 character identification code
The historical link (L) level industrial categories are expressed by a 4 character identification code
The worksheet (W) level industrial categories are expressed by a 6 character identification code

** This classification is used for calculation of GDP by industry.

Table III
SNA Industries from 1998 at the worksheet level (W) and their aggregations at the (S), (M) and (L) levels

Seq. #	NAICS Code	Title	S	M	L
Industries					
1	111400	Greenhouse, nursery and floriculture production	1	1	1
2	111A00	Crop production (except greenhouse, nursery and floriculture production)	1	1	1
3	112500	Animal aquaculture	1	1	1
4	112A00	Animal production (except animal aquaculture)	1	1	1
5	113000	Forestry and logging	2	2	2
6	114000	Fishing, hunting and trapping	3	3	3
7	115100	Support activities for crop production	4	4	4
8	115200	Support activities for animal production	4	4	4
9	115300	Support activities for forestry	4	4	4
10	211100	Oil and gas extraction	5	5	5
11	212100	Coal mining	5	6	6
12	212210	Iron ore mining	5	6	7
13	212220	Gold and silver ore mining	5	6	7
14	212230	Copper, nickel, lead and zinc ore mining	5	6	7
15	212290	Other metal ore mining	5	6	7
16	212310	Stone mining and quarrying	5	6	8
17	212320	Sand, gravel, clay, and ceramic and refractory minerals mining and quarrying	5	6	8
18	212392	Diamond extraction	5	6	8
19	212393	Salt mining	5	6	8
20	212394	Asbestos mining	5	6	8
21	212396	Potash mining	5	6	8
22	21239A	Miscellaneous non-metallic mineral mining and quarrying	5	6	8
23	213100	Support activities for mining and oil and gas extraction	5	7	9
24	221100	Electric power generation, transmission and distribution	6	8	10
25	221200	Natural gas distribution	6	9	11
26	221300	Water, sewage and other systems	6	9	11
27	2300A0	Residential building construction	7	10	12
28	2300B0	Non-residential building construction	7	10	13
29	2300C0	Transportation engineering construction	7	10	14
30	2300D0	Oil and gas engineering construction	7	10	15
31	2300E0	Electric power engineering construction	7	10	16
32	2300F0	Communication engineering construction	7	10	17
33	2300G0	Other engineering construction	7	10	18
34	2300H0	Repair construction	7	10	19
35	2300I0	Other activities of the construction industry	7	10	20
36	311100	Animal food manufacturing	8	11	21
37	311210	Flour milling and malt manufacturing	8	11	27
38	311220	Starch and vegetable fat and oil manufacturing	8	11	27
39	311230	Breakfast cereal manufacturing	8	11	27
40	311310	Sugar manufacturing	8	11	22
41	3113A0	Confectionery product manufacturing	8	11	22
42	311410	Frozen food manufacturing	8	11	23
43	311420	Fruit and vegetable canning, pickling and drying	8	11	23
44	311500	Dairy product manufacturing	8	11	24
45	311611	Animal (except poultry) slaughtering	8	11	25
46	311614	Rendering and meat processing from carcasses	8	11	25
47	311615	Poultry processing	8	11	25
48	311700	Seafood product preparation and packaging	8	11	26
49	311810	Bread and bakery product manufacturing	8	11	27
50	311821	Cookie and cracker manufacturing	8	11	27
51	311822	Flour mixes and dough manufacturing from purchased flour	8	11	27

Table III
SNA Industries from 1998 at the worksheet level (W) and their aggregations at the (S), (M) and (L) levels

Seq. #	NAICS Code	Title	S	M	L
Industries					
52	31182A	Dry pasta and tortilla manufacturing	8	11	27
53	311910	Snack food manufacturing	8	11	27
54	311920	Coffee and tea manufacturing	8	11	27
55	3119A0	Other miscellaneous food manufacturing	8	11	27
56	312110	Soft drink and ice manufacturing	8	12	28
57	312120	Breweries	8	12	29
58	312130	Wineries	8	12	30
59	312140	Distilleries	8	12	31
60	312200	Tobacco manufacturing	8	12	32
61	313100	Fibre, yarn and thread mills	8	13	33
62	313200	Fabric mills	8	13	33
63	313300	Textile and fabric finishing and fabric coating	8	13	33
64	314110	Carpet and rug mills	8	13	33
65	314120	Curtain and linen mills	8	13	33
66	314910	Textile bag and canvas mills	8	13	33
67	314990	All other textile product mills	8	13	33
68	315110	Hosiery and sock mills	8	14	34
69	315190	Other clothing knitting mills	8	14	34
70	315210	Cut and sew clothing contracting	8	14	34
71	315220	Men's and boys' cut and sew clothing manufacturing	8	14	34
72	315230	Women's and girls' cut and sew clothing manufacturing	8	14	34
73	315290	Other cut and sew clothing manufacturing	8	14	34
74	315900	Clothing accessories and other clothing manufacturing	8	14	34
75	316100	Leather and hide tanning and finishing	8	15	35
76	316200	Footwear manufacturing	8	15	35
77	316900	Other leather and allied product manufacturing	8	15	35
78	321100	Sawmills and wood preservation	8	16	36
79	321215	Structural wood product manufacturing	8	16	36
80	32121A	Veneer and plywood mills	8	16	36
81	32121B	Particle board, fibreboard, and wafer board mills	8	16	36
82	321911	Wood window and door manufacturing	8	16	36
83	321919	Other millwork	8	16	36
84	321920	Wood container and pallet manufacturing	8	16	36
85	321990	All other wood product manufacturing	8	16	36
86	322110	Pulp mills	8	17	37
87	322121	Paper (except newsprint) mills	8	17	37
88	322122	Newsprint mills	8	17	37
89	322130	Paperboard mills	8	17	37
90	322210	Paperboard container manufacturing	8	17	38
91	322220	Paper bag and coated and treated paper manufacturing	8	17	38
92	322230	Stationery product manufacturing	8	17	38
93	322290	Other converted paper product manufacturing	8	17	38
94	323110	Printing	8	18	39
95	323120	Support activities for printing	8	18	39
96	324110	Petroleum refineries	8	19	40
97	324120	Asphalt paving, roofing and saturated materials manufacturing	8	19	40
98	324190	Other petroleum and coal products manufacturing	8	19	40
99	325110	Petrochemical manufacturing	8	20	41
100	325120	Industrial gas manufacturing	8	20	41
101	325130	Synthetic dye and pigment manufacturing	8	20	41
102	3251A0	Other basic chemical manufacturing	8	20	41

Industries					
103	325200	Resin, synthetic rubber, and artificial and synthetic fibres and filament	8	20	42
104	325310	Fertilizer manufacturing	8	20	43
105	325320	Pesticide and other agricultural chemical manufacturing	8	20	43
106	325400	Pharmaceutical and medicine manufacturing	8	20	44
107	325510	Paint and coating manufacturing	8	20	45
108	325520	Adhesive manufacturing	8	20	45
109	325610	Soap and cleaning compound manufacturing	8	20	45
110	325620	Toilet preparation manufacturing	8	20	45
111	325900	Other chemical product manufacturing	8	20	45
112	326110	Unsupported plastic film, sheet and bag manufacturing	8	21	46
113	326120	Plastic pipe, pipe fitting and unsupported profile shape manufacturing	8	21	46
114	326130	Laminated plastic plate, sheet and shape manufacturing	8	21	46
115	326160	Plastic bottle manufacturing	8	21	46
116	3261A0	Polystyrene, urethane and other foam product manufacturing	8	21	46
117	326193	Motor vehicle plastic parts manufacturing	8	21	46
118	32619A	Miscellaneous plastic product manufacturing	8	21	46
119	326210	Tire manufacturing	8	21	47
120	326220	Rubber and plastic hose and belting manufacturing	8	21	47
121	326290	Other rubber product manufacturing	8	21	47
122	327100	Clay product and refractory manufacturing	8	22	49
123	327200	Glass and glass product manufacturing	8	22	49
124	327310	Cement manufacturing	8	22	48
125	327320	Ready-mix concrete manufacturing	8	22	48
126	3273A0	Concrete product manufacturing	8	22	48
127	327400	Lime and gypsum product manufacturing	8	22	49
128	327900	Other non-metallic mineral product manufacturing	8	22	49
129	331100	Iron and steel mills and ferro-alloy manufacturing	8	23	50
130	331210	Iron and steel pipes and tubes manufacturing from purchased steel	8	23	50
131	331220	Rolling and drawing of purchased steel	8	23	50
132	331313	Primary production of alumina and aluminium	8	23	50
133	331317	Aluminium rolling, drawing, extruding and alloying	8	23	50
134	331410	Non-ferrous metal (except aluminium) smelting and refining	8	23	50
135	3314A0	Non-ferrous metal (except aluminium) rolling, drawing, extruding	8	23	50
136	331510	Ferrous metal foundries	8	23	50
137	331520	Non-ferrous metal foundries	8	23	50
138	332100	Forging and stamping	8	24	51
139	332200	Cutlery and hand tool manufacturing	8	24	51
140	332311	Prefabricated metal building and component manufacturing	8	24	51
141	33231A	All other plate work and fabricated structural product manufacturing	8	24	51
142	332320	Ornamental and architectural metal products manufacturing	8	24	51
143	332410	Power boiler and heat exchanger manufacturing	8	24	51
144	332420	Metal tank (heavy gauge) manufacturing	8	24	51
145	332430	Metal can, box and other metal container (light gauge) manufacturing	8	24	51
146	332500	Hardware manufacturing	8	24	51
147	332600	Spring and wire product manufacturing	8	24	51
148	332710	Machine shops	8	24	51
149	332720	Turned product and screw, nut and bolt manufacturing	8	24	51
150	332800	Coating, engraving, heat treating and allied activities	8	24	51
151	332900	Other fabricated metal product manufacturing	8	24	51
152	333110	Agricultural implement manufacturing	8	25	52
153	333120	Construction machinery manufacturing	8	25	52

Seq. #	NAICS Code	Title	S	M	L
Industries					
154	333130	Mining and oil and gas field machinery manufacturing	8	25	52
155	333200	Industrial machinery manufacturing	8	25	52
156	333300	Commercial and service industry machinery manufacturing	8	25	52
157	333400	Ventilation, heating, air-conditioning and commercial refrigeration equipment	8	25	52
158	333500	Metalworking machinery manufacturing	8	25	52
159	333600	Engine, turbine and power transmission equipment manufacturing	8	25	52
160	333910	Pump and compressor manufacturing	8	25	52
161	333920	Material handling equipment manufacturing	8	25	52
162	333990	All other general-purpose machinery manufacturing	8	25	52
163	334100	Computer and peripheral equipment manufacturing	8	26	53
164	334210	Telephone apparatus manufacturing	8	26	54
165	334220	Radio and television broadcasting and wireless communications equipment	8	26	54
166	334290	Other communications equipment manufacturing	8	26	54
167	334300	Audio and video equipment manufacturing	8	26	54
168	334400	Semiconductor and other electronic component manufacturing	8	26	54
169	334500	Navigational, measuring, medical and control instruments manufacturing	8	26	54
170	334600	Manufacturing and reproducing magnetic and optical media	8	26	54
171	335100	Electric lighting equipment manufacturing	8	27	56
172	335200	Household appliance manufacturing	8	27	55
173	335311	Power, distribution and specialty transformers manufacturing	8	27	56
174	335312	Motor and generator manufacturing	8	27	56
175	335315	Switchgear and switchboard, and relay and industrial control apparatus	8	27	56
176	335910	Battery manufacturing	8	27	56
177	335920	Communication and energy wire and cable manufacturing	8	27	56
178	3359A0	Wiring devices and all other electrical equipment and component manufacturing	8	27	56
179	336110	Automobile and light-duty motor vehicle manufacturing	8	28	57
180	336120	Heavy-duty truck manufacturing	8	28	57
181	336200	Motor vehicle body and trailer manufacturing	8	28	58
182	336310	Motor vehicle gasoline engine and engine parts manufacturing	8	28	59
183	336320	Motor vehicle electrical and electronic equipment manufacturing	8	28	59
184	336330	Motor vehicle steering and suspension components (except springs) manufacturing	8	28	59
185	336340	Motor vehicle brake system manufacturing	8	28	59
186	336350	Motor vehicle transmission and power train parts manufacturing	8	28	59
187	336360	Motor vehicle seating and interior trim manufacturing	8	28	59
188	336370	Motor vehicle metal stamping	8	28	59
189	336390	Other motor vehicle parts manufacturing	8	28	59
190	336400	Aerospace product and parts manufacturing	8	28	60
191	336500	Railroad rolling stock manufacturing	8	28	61
192	336611	Ship building and repairing	8	28	62
193	336612	Boat building	8	28	62
194	336900	Other transportation equipment manufacturing	8	28	63
195	337110	Wood kitchen cabinet and counter top manufacturing	8	29	64
196	337127	Institutional furniture manufacturing	8	29	64
197	33712A	Household furniture manufacturing	8	29	64
198	337200	Office furniture (including fixtures) manufacturing	8	29	64
199	337900	Other furniture-related product manufacturing	8	29	64
200	339100	Medical equipment and supplies manufacturing	8	30	65
201	339910	Jewellery and silverware manufacturing	8	30	65
202	339920	Sporting and athletic goods manufacturing	8	30	65
203	339930	Doll, toy and game manufacturing	8	30	65
204	339940	Office supplies (except paper) manufacturing	8	30	65

Data quality, concepts and methodology

Presentation of data

A. Contents of the input-output tables

In the Canadian System of National Accounts, the Input-Output Accounts have two sets of interrelated accounts: (a) the Industry Accounts; and (b) the Commodity Accounts. The Industry Accounts contain the commodity composition of industry output and its complete costs of production including profits (surplus). The Commodity Accounts, on the other hand, show the supply and disposition of goods and services. The framework of the Canadian Input-Output Tables is closely related to the one described in the United Nations report, System of National Accounts, 1993. The inputs and outputs of industries, classified by commodity, are presented in separate tables. The Canadian Input-Output Tables are rectangular rather than square since the number of goods and services exceeds the number of industries. Square tables have been an international standard for most countries from the beginning of Input-Output concepts. Square means having the same dimensions, either product-by-product tables or industry by industry. The product by product table shows which products are used in the production of which other products; the industry by industry table which is by far the most widely used shows which industry uses the output of which other industry. From our own rectangular framework we can build square tables: industry by industry and industry by categories of final demand.

For each year, three basic tables are prepared: (1) Make (Output) Matrix; (2) Use (Input) Matrix; and (3) Final Demand Matrix. The Input-Output Accounts are prepared and balanced at the most detailed level known as the "Worksheet" (W) level, with 300 industries for the year 1998 and 1999. The number of goods and services and primary inputs add to 727 in 1998 and 1999. In the final demand, there are 170 categories for the years 1998 and 1999. The Worksheet (W) level data are then aggregated into Link (L), Medium (M), and Small (S) levels for consistency during the entire period as shown in the following table.

At the W, L and M levels of detail, some of the entries in various national matrices are confidential under the provisions of the Statistics Act. Consequently, data are provided to users after suppressing the confidential cells where applicable. The provincial tables are available at the "S" level of aggregation only and cell suppression is performed at that level.

The tables in the present publication are at the S level of aggregation, covering 51 goods and services and 6 primary inputs, (a total of 57), 25 industries and 13 final demand categories¹. The concordances among the various levels of aggregation for industries, goods and services and primary inputs are provided in the Appendix A.

¹ The final demand categories reflect mainly spending by consumers, fixed capital formation, inventories and imports and exports.

Designation of Aggregation	Number of Industries	Number of Final Demand Categories	Number of Goods & Services and Primary Inputs
S (Small)	25	13	57
M (Medium)	64	37	109
L (Link)	113	120	476
W (Worksheet)	300	170	727

B. Understanding the content of the national input-output tables

This section presented here highlights the descriptive as well as the analytical usefulness of input-output data, using a series of examples. Observed relationships between industries producing several goods and services and various users of these goods and services allow establishing meaningful economic relationships. A number of possible applications of the data are also offered. The examples are meant to familiarize the reader with the richness of the basic data as well as their potential for various analytical uses. For simplicity we present the data content using the National Input-Output Tables. The same demonstration applies to the provincial tables as well.

The illustration uses one manufacturing industry, and one commodity, petroleum & coal products, at the S level of aggregation. Utilizing data for 1999 (tables 7, 8 and 9), the industry can be identified as column 8 of the Make and Use Matrices and the commodity as row 26 in the Make, Use and Final Demand Matrices.

- i. Producers
- ii. Users
- iii. Composition of outputs and inputs
- iv. Gross domestic product (GDP) by industry
- v. Gross domestic product (GDP) for the total economy
- vi. Domestic availability of goods and services
- vii. Import share
- viii. Export share
- ix. Indirect taxes and subsidies

(i) Producers

The simple question, “who produces what?” is easily answered by referring to the Make Matrix where each row shows the distribution of output of each commodity by industry and where each column lists the distribution of output of each industry by commodity. For example, one may find that in 1999 the manufacturing industry (column 8 of the Make Matrix) produced \$21,642 million of petroleum and coal products (row 26) whereas all domestic industries combined (row 26 in the last column of the Make Matrix) produced \$24,765 million of that commodity. Thus, the manufacturing industry accounted for 87.4 percent of the total domestic production of this commodity in 1999 $(21,642 / 24,765) \times 100 = 87.4$ percent.

(ii) Users

The Input-Output Tables display the demand for various goods and services which may be used as intermediate inputs (goods and services that are purchased by an industry from

other industries to produce its outputs) or for final consumption by persons, governments, etc. So, the question, “who buys what?” is answered by referring to the Use (Input) and Final Demand Matrices. Elements in the row of the Use Matrix show the use of a particular commodity by various industries whereas elements of the same row appearing in the Final Demand Matrix indicate its use by various categories of final demand. For example, in 1999, altogether, industries used petroleum and coal products worth \$15,585 million – the sum of row 26 across the columns of the Use Matrix. Individual entries across row 26 represent individual uses by the industry shown as a column.

(iii) Composition of outputs and inputs

The detailed presentation of data on outputs and inputs presented in this publication permits analysis of the composition of outputs and inputs of each industry over time. Once again, using the Make Matrix, one is able to observe, say for 1999, that the total output of the manufacturing industry (column 8) amounted to \$512,184 million. Of this, petroleum and coal products accounted for \$21,642 million which represents 4.2 percent of the total output of that industry.

In a similar manner, inputs that are needed to produce outputs of industries can be identified in the Use Matrix. For example, column 8 of the Use Matrix lists various inputs needed to produce the output of the manufacturing industry. The magnitude of changes in the value of inputs over time can be identified and analyzed.

(iv) Gross domestic product (GDP) by industry

Generally speaking, the gross output of an industry consists of the value of the goods and services produced by that industry: the value of steel produced by the steel industry; the value of cars and trucks produced by the motor vehicles manufacturing industry; etc. A brief reflection tells us that, for example, the production of steel requires coal and iron ore and other inputs. These goods and services are not the products of steel mills. Rather, they are produced by other industries and used by the steel mills as their inputs. Thus, a measure of the unduplicated production of an industry should exclude all intermediate inputs purchased from other industries. This measure is called value added or Gross Domestic Product.

The Use Matrix displays all the costs incurred in production by an industry: the goods and services used as intermediate inputs; indirect taxes and subsidies; and returns to the factors of production (rows 54 to 57 of the Use Matrix), namely: wages and salaries, supplementary labour income, mixed income and other operating surplus.

(v) Gross domestic product (GDP) for the total economy

There are two measures of the Gross Domestic Product which provide valuation of the production of goods and services at different levels. They are: (a) Gross Domestic Product at Basic Price²; and (b) Gross Domestic Product at Market Prices.

Basic Price valuation represents the earnings of the factors of production as measured by the costs of labour (wages and salaries, supplementary labour income); capital inputs (mixed income and other operating surplus); plus indirect taxes on factors of production less subsidies on production.

Indirect taxes (row 52) are a cost to the industry and are reflected in the market price of goods and services produced by the industry. Subsidies (row 53), where applicable, have the effect of lowering cost to the firms receiving them, and thus reduce the market prices of goods and services produced by the industry. They are shown as negative (-) entries in the Use (Input) Matrix. Both indirect taxes and subsidies on products and on production affect the market price valuation of goods and services.

It should be noted that indirect taxes are paid not only by the business sector but also by other sectors of the economy which are covered in the Final Demand Matrix of this publication. Subsidies, by definition, apply only to the business sector of the economy.

The GDP at Market Prices as calculated from a revenue approach is called income-based GDP and from an expenditure approach is called expenditure based GDP. The Input-Output Accounts also incorporate components of expenditure-based GDP and is obtained by summing up personal expenditure, capital formation, government current expenditure, change in the value of inventories and net exports (exports less imports) appearing in the Final Demand Matrix. In the Final Demand Matrix, these categories are shown at a finer level of detail.

(vi) Domestic availability of goods and services

It may be of interest to know the domestic availability of a particular commodity (or all goods and services) for one or many years. The domestic availability of a commodity is defined as total production less exports plus imports (assuming no inventory change). These values can be read directly from the Input-Output Tables. In 1999, the domestic production of petroleum and coal products was \$24,765 million (last column of the Make (Output) Matrix) while total exports were \$5,080 million (column 12 of the Final Demand Matrix) and imports were \$3,606 million (column 13 of the Final Demand Matrix). Thus, the domestic availability of this product can be derived as: \$24,765 million domestic production - \$5,080 million exports + \$3,606 million imports = \$23,291 million.

(vii) Import share

The data used in the preceding section also allow the calculation of the import share of a commodity, that is, what portion of the domestic availability of a commodity comes from foreign countries. From these data, the import share for the same commodity can be calculated as follows:

$$(\text{Total imports} / \text{Total domestic availability}) \times 100$$

that is for 1999:

$$(3,606 / 23,291) \times 100 = 15.5 \text{ percent.}$$

(viii) Export share

For countries with considerable foreign trade like Canada, there is a keen interest in measures of export intensity. A simple indicator of such an intensity is the proportion of total domestic production that is exported. Using the same commodity as in the previous illustrations, 20.5 percent of the domestic production of petroleum and coal products was exported in 1999 as follows:

$$(5,080 / 24,765) \times 100 = 20.5 \text{ percent.}$$

(ix) Indirect taxes and subsidies

In compiling Input Output Accounts at producers' prices and purchasers' prices, the costs or margins that arise between the value received by the producer (i.e. the value that covers all costs of production) and the value paid by the purchaser must be identified. One of these margins is the value of commodity taxes paid by the purchaser, be it an industry or a category of final demand. All commodity indirect taxes and all other indirect taxes are classified to the industry or final demand category paying them. The total of such taxes agrees with values published in the National Economic and Financial Accounts (Catalogue 13-001-XPB) but the Input Output Accounts provide additional information such as the industries and final demand categories which pay these taxes. Similarly,

² *The valuation at basic price is the internationally preferred method to value the cost of factors of production used in the production process. Market price valuation reflects actual costs to the users. It is a concept that is used to measure consumption. The difference between the two concepts is the value of taxes on products, net of subsidies. GDP at basic price can be calculated from the I/O Tables. In the detailed tables we distinguish eight elements in the primary inputs which can be used to calculate both the GDP at market price and the GDP basic price. The detailed list of these primary inputs is as follows:*

- Indirect taxes on products*
- Subsidies on products*
- Subsidies on production*
- Indirect taxes on production*
- Wages and salaries*
- Supplementary labour income*
- Mixed income*
- Other operating surplus*

To calculate GDP at market price all the components above must be added while the GDP basic price is obtained by summing the last six components of the same list. In this publication, the small "S" tables aggregates the indirect taxes together and the subsidies together.

in the Input-Output Tables, subsidies are allocated to the industries receiving them. Also, from 1986 onwards, subsidies are broken down into two categories: commodity subsidies and non-commodity subsidies. These details and their routing in the Input-Output Accounts make additional analyses possible, e.g., to determine the effects of taxes and subsidies, to build certain policy simulation models, etc.³

³ See for example Durand, René and Rioux, Ronald: "Estimating Final Demand Expenditure at Factor Cost and Net Price Indices", *Economic Systems Research*; Vol. 6, No. 3, 1994, pages 265-275.

¹ Ratings

A - most reliable

B - reliable

C - acceptable

² Intermediate inputs only

* The quality ratings are determined with reference to the latest benchmark year.

Current price estimates

The ranking for the current price estimates have, in general, been determined as follows: A rank of A is assigned to estimates (aggregates or commodity detail), that are based completely on censuses, surveys or administrative records with minimum adjustments for coverage, valuation and classification.

The majority of manufacturing industries, for example, have a rank of A for current price outputs, inputs and Gross Domestic Product. Undercoverage is minimal and very good commodity output detail exists. In general, intermediate inputs are well specified. Those for the use of fuel and electricity, containers, and raw materials are also well detailed, and purchased services are estimated from diverse sources. Wages and salaries are derived from the Census of Manufactures. The surplus for the manufacturing industry is calculated as the difference between outputs and operating inputs; therefore, its quality is related to these items. Aggregate outputs for non-residential construction and its commodity flows to final demand as well as the aggregate value for machinery and equipment have a rank of A, since this information comes directly from the Capital Expenditure survey. Imports, exports and re-exports are well defined by commodity and given a rank of A. Most government industry control totals and commodity detail for inputs and Gross Domestic Product are ranked as A since detail is readily available from administrative records.

A rank of B refers to estimates that are developed using the same sources as listed in (a). The difference is that only the aggregate value of some important inputs and outputs is available and the commodity detail required for the Input-Output framework needs to be estimated.

This implies that estimation must be done for commodity detail of transactions reported under broad categories such as "all other". The sources occasionally have very general commodity or functional descriptions which must be coded to Input-Output commodity detail. For example, utilities have to be specified in terms of electricity and type of fuels, etc.

A rank of C refers to estimates for which no direct information is available even for control totals or to estimates which are based on occasional surveys extrapolated to the current period or interpolated between two data points.

For example, no survey exists for the industry Services Related To Mineral Extract. In addition, the inputs and outputs of some industries in transportation and services must also be estimated.

In general, weaknesses in source data arise mainly from the following: a) incomplete details on particular commodities; b) undercoverage; c) inappropriate concepts and definitions. These are briefly discussed below.

a) *Incomplete details*

The most obvious weakness arises from the use of source data where adequate commodity details are not available. These are, therefore, estimated. In the commodity balancing process the estimates are reviewed and adjustment made when necessary.

b) *Undercoverage*

This weakness is normally corrected by inflating reported data by a factor that allows the data to represent the universe concerned. For example, in the case of hospitals, the number of beds in all hospitals is used to inflate reported annual data which relate to the reported number of beds in hospitals included in the survey.

c) *Concepts and Definitions not Suitable for the SNA*

For administrative records, the data are quite varied in coverage, details, definitions and concepts and often these factors do not coincide with those required for the Input-Output Accounts. They must be thoroughly examined and adjusted for consistency and coverage using carefully designed estimating procedures.
