Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed *standards of service* which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136. The service standards are also published on *www.statcan.ca* under About Statistics Canada > Providing services to Canadians.

Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Acknowledgments

This publication was prepared under the direction of Michel Girard, Director, Industry Accounts Division; André Loranger, Assistant Director, Industry Accounts Division; Jacques Delisle, Assistant Director, Industry Accounts Division; with the close participation of Marylin Constantineau, Marie-Josée Hodgert, Ronald Rioux, Merhzad Salem and Sandy Tennant. The following staff members have contributed in one way or another: Arbeau, Dave;Armstrong, Jim; Bédard, Michel; Bellè, Franco; Bhatia, Rohit; Boivin, Sandra; Bourdeau, Jacinthe; Brown, Debbie; Bukenya, Edward; Burvill, Ivan; Cameron, Jim; Campbell, Robert; Caya, Stéphane; Cheng, Mike; Clavet, Geneviève; Crocker, Brent; Dan, Qing; Dempsey, Tom; Do, Margaretta; Dominguez, Christine; Dondo, Kudzayi; Dorion, Pierre; Dubé, Guillaume; Evans, Deborah; Feng, Yan; Gai, Huifa; Généreux, Pierre; Ghanem, Ziad; Hartman, Doug; Jacques, André; Jayasinghe, Milan; Johnson, Anick; Kaba, Mamady; Lacasse, Diane; Langen, Brent; Latimer, Pat; Le, Tai Van; Leblanc, Dave; Leclerc, Fabienne; Mariasingham, Joseph; Monfils, Paul; Murat, Rick; Nguyen, Tuan; Nock, Eddie; Page, Marjorie; Palinic, Robert; Philippe, Sharon; Pira, Farida; Racette, Marc; Rispoli, Luke; Sceviour, Roger; Scollan, Marian; Smith, Philip; So, Pui; Stewart, Craig; Tang, Yue; ten Den, Catherine; Tong, Guo; Trau, Andreas; Walford, Gord.

The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at factor cost as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the Euro-pean Communities, International Monetary Fund, Organization for Economic Co-operation and development, United Nations and World Bank.

What's new in this publication

This publication is the fifth issue of Input-Output Structure of the Canadian Economy, Cat. 15-201-X in its electronic version. Noticeable features are:

- **Improved data quality:** Statistics Canada undertook a massive project to improve its provincial economic statistics in 1996. Using sub-national surveys and other improved sources, the reliability of statistics published here is substantially improved and is approximately equal across provinces.

- **Provincial input-output tables:** Beginning with reference year 1997, input-output tables are compiled and published annually in this catalogue for each province and territory of Canada. Sub-national tables sum to the national tables for Canada. The accounting framework and concepts of these tables are identical to the national tables that date back to the 1961 reference year. We also refer in the text to exports and imports between provinces as well as abroad. To have access to the interprovincial trade data please consult CANSIM Table 386-0002.

- **Classifications:** In the present input-output tables, industries are classified by the North American Industry Classification (NAICS 1997) for year 2001 final and (NAICS 2002) for year 2002 preliminary. Note that for the year 2002 the number of industries has gone from 300 to 303. The changes are mainly in the telecommunication industries. Two more classifications have been added for detailed level of dissemination: The industry classification level of dissemination has 286 industries and the commodity has 713 commodities. These classifications are in concordance to their respective "complete" detailed classification level. These new classifications for dissemination make the presentation of the detailed I/O tables exempt of empty rows or columns of data.

  Classifications by industries, by commodity and by categories of final demand have been simplified to such an extent that all classifications are now presented in hierarchical order. For example, the classifications of final demand give from the detail to the aggregate, the concordances and by the same token the aggregation parameters that permits to pass from the "W" level of final demand categories to the other levels "L", "M" and "S". All classifications of final demand include the interprovincial trade.

- **Valuation of industry GDP:** The valuation of industry gross domestic product has changed from factor cost to basic price, in accordance with conventions recommended by the United Nations report and System of National Accounts, 1993. Under the old valuation, industry gross domestic product was calculated to include the returns to labour and capital only, excluding taxes or production subsidies. The new valuation of industry GDP is basic prices which includes other taxes on production and other subsidies on production. Data on gross output is at modified basic price, because production data show prices actually received by producers thus reflecting the effect of subsidies on products. For this reason, we have made available, at all levels of aggregation of the Input-Output Tables, the breakdown of subsidies into its components: subsidies on products and subsidies on production. This will be more convenient to identify all the components of GDP at basic price and at market price.

- **Refinements to the 1993 SNA conventions:** A number of refinements to the adopted recommendations were implemented affecting the treatment of specific transactions or industries.

Overview

Annual provincial Input-Output tables

With this publication, Statistics Canada is providing input-output (IO) accounts for all provinces and territories of Canada on an annual basis starting with the year 1997. Until recently, annual publication of input-output accounts were limited to the national economy. These accounts are the most comprehensive and detailed statistics on transactions involving production activity and intermediate as well as final consumption of goods and services in the economy. The accounts are prepared at the Worksheet level of detail, consisting of 303 industries, 727 groups of goods and services (commodities), and 172 categories of final users. There are three more compact versions of the tables that are usually available to the public: the Link, the Medium and the Small aggregation tables. The most compact presentation of IO accounts, the Small IO tables, are provided in this publication.

A quick guide to the IO accounts

What are Input, Output and Final demand tables

The input-output accounts of Canada and its provinces and territories are presented in three main data tables (matrices) for each jurisdiction. These are the output table, input table, and the final demand table. In addition, provinces' and territories' tables are linked together through an interprovincial flows table that shows each jurisdiction's exports to, and imports from, other provinces and territories as well as abroad. These tables are compiled every year by Statistics Canada using newly instituted surveys and other improved sources that are designed to collect reliable statistics from each jurisdiction. The tables are part of the Canadian System of National Accounts (CSNA). The CSNA is a system of integrated statistical accounts consisting of four components: input-output tables, income and expenditure account (national and provincial), balance of payments and international position, and environment accounts. This system is "integrated" in the sense that all of the data belonging to this system are consistent with one another. IO tables cover all economic activities conducted in the market economies of each province and territory, encompassing persons, businesses, government and non-governmental (non-profit) organizations, and entities outside its jurisdiction that give rise to imports or exports (interprovincially or internationally).

To compile the IO accounts, Input-Output Division obtains source data from all relevant surveys as well as administrative sources such as tax records, professional and industry organizations, and non-government institutions every year for each province and territory. In the process of preparing statistical estimates, data from various sources are confronted, analysed by subject-matter experts and used to compile estimates that are consistent with all other estimates in the System and provide a valid and coherent statistical picture of the subject matter. Consistency is a key feature of the statistics produced by the Accounts. It is highly valuable to the user because data taken from the accounts do not disagree with each other or provide contradictory information. When various data bearing on the same subject do not provide a consistent picture, the user is left in the position of either reconciling inconsistencies without the benefit of necessary information, or discarding the data for lack of realism or credibility. A good example of how consistency is achieved through data integration is a process known as "commodity balancing". Because, logically, the supply of a good or service from all possible sources must equal its demand or disposition in a given jurisdiction, every good and service in the economy is scrutinized to make sure it obeys this rule before it is used for IO compilation. When supply does not add up to demand or disposition (demand plus inventory), as is often the case[1], each data source is questioned, errors and omissions are corrected,

1. *Statistics are often prepared according to different concepts. They are also evaluated on a different basis or cover slightly different periods, i.e. fiscal versus calendar year.*

and sometimes the data is re-estimated in light of more reliable information to achieve complete balance between supply and disposition.

What IO tables show

The tables are set up on a year-by-year basis, rather than in time series. Tables for Canada (the national tables) date back to 1961, while regular sub-national tables began with the 1996 reference year. The tables identify transactions in three ways:

1. they show data by commodity, a neutral terminology for a group of goods or services or type of transactions (e.g., “wages” or “indirect taxes”); The most detailed tables, the Worksheet tables, groups all transactions into 727 commodities. Tables that are published electronically—known as the “Small” tables—compact this detail into 59 commodities.

2. they show data by industry: a group of producing units, such as establishments or enterprises, that are engaged in market transactions in goods or services. The term “industry” does not imply that they are industrial businesses. The terminology covers all entities that conduct activities involving market transactions. The concept includes such groups as Municipal Governments, non-profit institutions such as Sports and Recreation Clubs, and professions such as Offices of Dentists. The Small tables published here show 25 very aggregated industries but, at the most detailed (Worksheet) level, the tables are made up of 303 industries. For the provinces,the territories and for Canada the inputs and the outputs tables show the data for 727 goods and services produced (for the output) or used (for the inputs) for each of the 303 industries;

3. they show data by categories of final demand, a convenient breakdown that identifies transactions that constitute final sales of goods and services.

The Final demand table

This table shows transactions in goods and services, in a province or territory, that are for *final* use. A transaction is for final use when the good or service is exported, when it is bought for final consumption (i.e., it is not used to produce other goods and services for the market), or as capital investment. While all purchases by households (persons) are considered final consumption in the System, businesses, governments, and other entities make purchases both as intermediate and as final expenditure. Their intermediate expenditures are shown in the Input (or Intermediate Use) table and their final expenditures are shown in the Final Demand table. For instance, when a retail store pays for electricity, it is shown as payment from Retail Trade industry (Input table) and as output for Electric Power industry (Output table). However, when the same store buys payment processing machinery, the payment is shown in the Final Demand table as investment by the Retail Trade industry and also either an output of the relevant Canadian industry, as an import, or as a withdrawal from inventories of the particular machinery. Imports are also shown in the Final Demand table.

In this publication, the Final Demand table is shown with a breakdown of 18 categories, but at the most detailed level, IO tables are compiled with a breakdown of 172 categories. Regardless of the level of detail, Final Demand tables always distinguish the following broad categories:

1. Personal Expenditure of households[2],

2. Capital investment by persons, governments and non-profit entities (separately for Construction investment and Machinery and Equipment investment),

3. Current expenditures of governments,

2. *This includes personal spending by residents of a province, whether spent in their own or another province or territory or country while visiting. It also includes the full value of capital equipment under finance leases acquired by individuals (e.g., automobiles). Personal expenditure is higher than actual (cash) spending because of a number of national accounting imputations. These are: an imputation for services (rental value) of owner-occupied dwellings, an imputation for interest payments to financial institutions net of interest income from the same source, an imputation for the investment income of insurance carriers and for changes in their actuarial reserves when related to persons net insurance claims.*

4. Additions to or withdrawals from inventories (withdrawals are shown as negative values),

5. Exports to other provinces,

6. Imports from other provinces,

7. International and interprovincial exports of a provinces or territory and,

8. International and interprovincial imports of a province or territory.

In the most detailed table these categories are presented with the 727 commodity detail, but are only shown with the more compact 59 commodity detail in this release. Some of these expenditures are presented with a useful breakdown. For instance, Personal Expenditure presented in this release is broken down into durable goods, semi-durable goods, non-durable goods, and services. In the most detailed table, final demand is presented with 172 categories, of which personal expenditure is shown for 52 categories.

The Input table

The input table, also known as the Intermediate Use table, is where purchases that relate to production (current expenses) are presented for groups of producing units (industries). It was noted earlier that, in the context of input-output accounts, “industry” also refers to entities such as governments, non-profit organizations, professions, and so on. In these cases, inputs refer to their current (i.e., non-capital) expenditure on goods and services. The input table includes a few other entries that businesses would report on the expense side of their income statement. These are: Indirect Taxes on Production (e.g., property taxes), Indirect Taxes on Products (e.g., sales taxes), Subsidies on Products (-), Subsidies on Production (-) (e.g., manpower training subsidies), Wages and Salaries, Supplementary Labour Income (e.g., employers’ contribution to employment insurance), Mixed Income (e.g., income of unincorporated businesses), and Other Operating Surplus. The latter item is the income or loss that is left over after accounting for the cost of all intermediate inputs and the items just discussed. This ensures that the subtotal of inputs for a given industry is equal to its “outputs” (discussed below) and an accounting identity is maintained between inputs and outputs of industries. The most detailed input table for a province shows up to 727 goods and services used for each of 303 industries. The current release shows a more compact table with 25 industries and 59 goods and services.

Gross Domestic Product

The eight cost entries found in the input table (see previous paragraph) contain all the data one needs to calculate the Gross Domestic Product (GDP) of each industry in Canada or in a province. GDP at basic prices-the statistic officially published by Statistics Canada-is obtained by adding the last six components. GDP at market prices is the sum of all eight cost components. Using this data, we one can calculate the GDP of a province or territory, GDP of the whole Canadian economy, showing either the provincial or the industrial composition of GDP across Canada.

The Output table

The Output table, also known as the Make table, is where the values of production of good and services are recorded for each producing industry in a given jurisdiction (e.g., a province). Once again, the term "industry" is comprehensive, covering all entities except households (persons). In most cases, production or output of an industry is simply their sales or shipments[3]. Production, of course, excludes used goods, because they were already counted as production in an earlier period. For retailers and wholesalers, production is considered to be the value they add to (or the margin they earn from) the products they sell, rather than the total receipt from their

3. *Production also includes what is produced in a year but not sold (added to inventories), excludes sales out of inventories (and gains or losses from changes in inventory values), and includes own use (e.g., feed corn grown by farmers for their own livestock).*

sales. For owners of real property, production is gross rent receipts, except for residential properties occupied by their owners where an imputation is made for the equivalent rental value of living in the property.

For banking and similar services, the net interest income of the institutions is considered production. Where they charge fees for their services, they are also considered output. The production of insurance carriers consists of premiums net of claims and adjustment expenses, plus incomes earned on invested reserves as well as rental income, plus changes in actuarial reserves. For construction, the value of work that has been put in place in a particular jurisdiction is considered output, whether this is done by hired contractors or by the industry (e.g. electric power) on its own account[4]. For holding companies, non-profit institutions (e.g., churches, clubs), the central bank and general government, the value of their output is computed as the sum of operating expenses, labour compensation and depreciation of fixed capital. Hospitals, schools, universities and other institutions that are funded by governments but also earn operating revenues have an additional output equal to their revenues from sales of goods and services. The output table (Small) included in this release shows 25 industries producing 59 commodities. At the most detailed level, the output table shows 303 industries and 727 goods and services for a province, territory, or the Canadian economy.

Availability of data

1. CANSIM

a) Input-Output Tables

The Input-Output Tables of this publication are stored in CANSIM at the Small (S) level, Medium (M) level and Link (L) level of aggregation.

Final demand	CANSIM table 381-0012

b) Gross Domestic Product at basic price

The time series of Gross Domestic Product (GDP) at basic price from 1961 to 2002 are also available on CANSIM at S, M, and L levels of aggregation.

4. *This means that construction "industry" covers the entire activity, rather than only the work of entities working in the construction industry.*

Time series: 1961-2002

Type: hierarchical (S,M,L), current dollars (C$)

The GDP data are presented in CANSIM hierarchical format in the order of S, M and L aggregations. The two digits NAICS code represents the S level, the three digits NAICS code denotes the M level and the four digits NAICS code indicates the L level of aggregation.

CANSIM Table 379-0023	Business Sector Industries, non-business Sector Industries and total C $
CANSIM Table 379-0024	Special Aggregations C $

2. Industry accounts division

For the period 1961-2002, the following data in current dollars are available from the Industry accounts Division on request:

(a) The Input-Output tables;

(b) The Gross Domestic Product (basic price or market price);

(c) Gross Outputs;

(d) Trade, transport and tax margins by commodity and services

The Canadian Open Input-Output Model

The Canadian Open input-output model[5] determines the total effect on the economy from additional final expenditures and the ultimate consumption of industry outputs.

As an example, what if we increase the consumer demand for commodity “Meat, fish and dairy products” by $100 million dollars? What is the economic impact of this spending? Using the national IO model we will calculate what will be the effect in the Canadian economy of such an increase in consumer demand.

An increase of $100 million in commodity “Meat, fish and dairy products” will generate a total (direct and indirect) effect on domestic production summarized for specific variables ($000):

GDP at market prices:	$ 74,716
Intermediate inputs: :	$ 129,331
Gross output:	$ 204,047
Indirect taxes on products:	$ 1,436
Total employment (jobs):	1,455
Greenhouse gas emissions (carbon dioxide equivalents - kilotonnes):	100
Total energy requirements (terajoules):	677

This $100 million impact is an exogenous shock on final users of commodity spending in the Canadian economy. In the Canadian IO tables (Table 9-1) at the small aggregation we identify in the final demand under non-durable goods a large spending $14560.4 (millions of dollars) in commodity “Meat, fish and dairy products”. This increase represents less than one percent on the consumer demand for this commodity but it’s an easy number for analysis. The model being linear, it can be scaled to any level. The GDP at market price covers all components of primary inputs[6]. As highlighted in the table we observe from the results that GDP at market price and intermediate inputs

5. *In the previous issue we introduced the concept of an IO multiplier as a quantitative measure created by a particular IO based economic model (The input-output structure of the Canadian economy 2000-2001).In this issue, we explore the results generated by a report of a simulation on the Canadian Open input-output model.*
6. *GDP at market price components:GDP at market price components: · Indirect taxes on products · Subsidies on products · Subsidies on production · Indirect taxes on production · Wages and salaries · Supplementary labour income · Mixed income · Other operating surplus*

sums up to gross output which is consistent with basic identities derived from the IO framework. “Meat, fish and dairy products” commodity is an aggregate of “W” level commodities (see appendix, classifications, Text table 3) which comprise some 25 detailed commodities. As a comparison, if the same $100 million was spent on a single commodity such as “cement” we would observe that it’s direct requirement in energy (electricity and natural gas) far exceed the same requirements of the aggregate commodity “Meat, fish and dairy products”. It’s GDP at market price total at $72,175 is of the same order of magnitude as “Meat, fish and dairy products”. However it’s total gross output is much less at $128,463.

In addition to the highlighted variables above, the IO model report provides supply requirements from other sources such as imports and government production of goods and services.

The report generated by the National IO model starts with a title page followed by an index (see appendices) of thirty different tables covering summary results and three levels of detailed tables at the “S”, “M” and “W” levels respectively. The detailed results in tables “S”, “M” and “W” are all consistent since the model runs at the detailed “W” level and “S” and “M” levels are aggregated from the “W” level calculationsI.

Let us first examine the summary tables as presented in the report. Text table 1 resumes the shock which shows in commodity “Meat, fish and dairy products” a value of $100,000 ($‘000’). This shock is expressed in purchaser’s price which means that margins, where applicable, will be taken into account, the shock being calculated in producer’s prices.

Text table 1
Summary of shock

	Simulation options selected by the user: commodity shock, domestic expenditure, in purchaser prices, at the small aggregation.	
	Shock	Endogenous international imports
	thousands of dollars	
Commodities, small aggregation		
Other agricultural products	0	1
Forestry products	0	1
Fish, seafood and trapping products	0	1
Metal ores and concentrates	0	1
Mineral fuels	0	1
Non-metallic minerals	0	1
Services incidental to mining	0	1
Meat, fish and dairy products	100,000	1
Fruit, vegetables and other food products, feeds	0	1
Soft drinks and alcoholic beverages	0	1
Tobacco and tobacco products	0	1
Leather, rubber and plastic products	0	1
Textile products	0	1
Hosiery, clothing and accessories	0	1
Lumber and wood products	0	1
Furniture and fixtures	0	1
Wood pulp, paper and paper products	0	1
Printing and publishing	0	1
Primary metal products	0	1
Other metal products	0	1
Machinery and equipment	0	1
Motor vehicles, other transport equipment and parts	0	1
Electrical, electronic and communications products	0	1
Non-metallic mineral products	0	1
Petroleum and coal products	0	1
Chemicals, pharmaceuticals and chemical products	0	1
Other manufactured products	0	1
Residential construction	0	1
Non-residential construction	0	1
Repair construction	0	1
Transportation and storage	0	1
Communications services	0	1
Other utilities	0	1
Wholesaling margins	0	1
Retailing margins	0	1
Gross imputed rent	0	1
Other finance, insurance and real estate services	0	1
Business and computer services	0	1
Private education services	0	1
Health and social services	0	1
Accommodation services and meals	0	1
Other services	0	1
Transportation margins	0	1
Operating, office, cafeteria and laboratory supplies	0	1
Travel and entertainment, advertising and promotion	0	1
Non-profit institutions serving households	0	1
Government sector services	0	1
Non-competing imports	0	1
Unallocated imports and exports	0	1
Sales of other government services	0	1
Total	**100,000**	

Text table 2 gives a summary of the total impact on GDP. The total impact (direct and indirect[7]) on GDP at market price shows the equality between "Expenditure-based GDP" and "Income-based GDP". This equality is typical of the IO framework. Detailed component of GDP are listed. Final domestic expenditures on commodities are $100 million. GDP at market price (expenditure based) is calculated as "Final domestic expenditures on commodities" less leakages; the most important one being "Direct and indirect international imports (net of duties)" for an amount of $15,546. GDP at market price (income based) is the sum of all factors of production listed below. A sub-total for GDP at basic prices is also provided.

Text table 2
Impact on GDP

	Impact on GDP
	thousands of dollars
Expenditure-based GDP	
GDP at market prices	**74,716**
Final domestic expenditures on commodities	100,000
Exports of commodities	0
Commodity indirect taxes on final demand	-91
International imports on final demand (net of duties)	-7,149
Direct and indirect international imports (net of duties)	-15,546
Import duties	-83
Inventories and other commodity leakages	-2,413
Income-based GDP	
GDP at market prices	**74,716**
Indirect taxes on products	1,345
Subsidies on products	-2,478
GDP at basic prices	**75,850**
Subsidies on production	-150
Indirect taxes on production	3,239
Wages and salaries	36,812
Supplementary labour income	4,467
Mixed income	3,570
Other operating surplus	27,913

The direct and indirect effects on GDP represent the net "unduplicated" production on the economy. If we add to the primary inputs the list of total (direct and indirect) intermediate inputs we obtain total inputs (Text table3). Total inputs are equal by construction to total outputs in the IO framework.

7. *On a final demand shock, the **direct** effects represent variations in activities immediately stimulated such as an impact on a specific industry. In the case of the present example, the shock is performed on an aggregated commodity which stimulates the first suppliers to final demand which are dominantly manufacturing and trade. The **indirect** effects are calculated for those suppliers that precede the first suppliers. The cumulated sum of all subsequent effects of suppliers to previous suppliers constitute the total indirect effects. The sum of the direct effects and the indirect effects constitute the **total** effects. These three concepts are used to calculate different types of multipliers.*

Text table 3
Impact on primary and intermediate inputs

	Impact on primary and intermediate inputs
	thousands of dollars
Intermediate inputs	**129,331**
Domestically produced intermediate inputs	111,703
Imported intermediate inputs, net of duties	15,546
Duties on imported intermediate inputs	49
Intermediate inputs from inventories and other leakages	2,034
Primary inputs	**74,716**
Indirect taxes on products	1,345
Subsidies on products	-2,478
Subsidies on production	-150
Indirect taxes on production	3,239
Wages and salaries	36,812
Supplementary labour income	4,467
Mixed income	3,570
Other operating surplus	27,913
Total inputs	**204,047**

Text table 4 highlights the direct and indirect effects from the shock as ratios and multipliers. These calculations are performed for: **Direct Impacts** - Industry output delivered to final demand, the value-added associated with this output as well as other supply to final demand directly. **Indirect Impacts** - Industry output delivered to other industries, the value-added associated with this output as well as other supply to industries. **Total Impact** = Direct + Indirect Impacts Impacts are expressed in this report in terms of: - Production (Gross Output) - Value-added (GDP) - Labour Income - Employment, The multiplier is the ratio of total impact to exogenous shock. Take for example the GDP multiplier. It is calculated as the ratio of total GDP / initial shock (74,716 / 100,000) = 0.75. On the other hand, a ratio of total-to-direct employment = 2.14 can be interpreted as an increment of 1.14 job (indirect) to every direct job.

Text table 4
Ratios and multipliers

	Ratios and multipliers
	thousands of dollars
GDP	
Direct GDP	32,282
Total GDP	74,716
GDP multiplier	0.75
Ratio of total-to-direct GDP	2.31
Labour income	
Direct labour income	21,231
Total labour income	44,849
Labour income multiplier	0.45
Ratio of total-to-direct labour income	2.11
Employment	
Direct employment	680
Total employment	1,455
Employment multiplier (per million dollars)	14.55
Ratio of total-to-direct employment	2.14
Output	
Direct output	92,345
Total output	204,047
Output multiplier	2.04
Ratio of total-to-direct output	2.21

Text table 5 gives a detailed breakdown of taxes levied on products by type of taxes. For example the total (direct and indirect) PST (Provincial Sales Tax) levied is $422,000 for intermediate inputs and $29,000 is at the final demand. The tax that applies at the final demand is direct only.

Text table 5
Taxes on products by type of tax

	Intermediate inputs	Final demand	Total
	thousands of dollars		
Total federal	**440**	**57**	**497**
Federal trading profits on lottery and race tracks	0	0	0
Federal gas tax	341	0	341
Federal excise tax	0	0	0
Federal duty tax	3	0	3
Federal air tax	16	0	16
G.S.T	80	57	137
Total provincial	**902**	**34**	**936**
Provincial gallon tax	2	0	2
Provincial trading profits	9	0	9
Provincial gas tax	462	0	462
Provincial amusement tax	2	0	2
P.S.T	422	29	452
H.S.T	5	5	10
Total municipal	**3**	**0**	**3**
Municipal amusement tax	0	0	0
M.S.T.	3	0	3
Total	**1,345**	**91**	**1,436**

The data in the above summary text tables (text tables 1 to 5) is contained somewhere in the detailed tables at all three levels of aggregation(S, M and W). Linkages between the summary tables and the detailed tables can be observed by examining the GDP components, the output and the employment.

Text table 6 shows the direct and indirect effect at the small industry level on the GDP, the output and the employment.

Text table 6
Economic impact on the Canadian economy - Commodity shock, domestic expenditure, in purchaser prices, at the Small aggregation. (Meat, fish and dairy products)

Industries (Small aggregation)	NAICS	GDP at basic prices		Output		Direct effects		Total effects	
		Direct effects	Total effects	Direct effects	Total effects	Employee jobs	All jobs	Employee jobs	All jobs

Non-profitinstitutions serving households	NP	0	9	0	15	0	0	0	0
Government Sector	GS	63	705	90	1.226	1	1	11	11
Total	...	**31.926**	**75.85**	**92.345**	**204.047**	**641**	**680**	**1.163**	**1.455**

This $100 million consumer demand is in purchasers prices. Trade margins as well as transportation and other margins are reported in separate activities. We observe in the direct GDP that retail and wholesale trade occupy the first and third position. Manufacturing is in second position. The detailed GDP (W level) would provide us the same information with a breakdown of the industry detail. Total GDP (total effects) shows that total manufacturing ranks first and wholesale slips to the fourth position. This is because another player (indirect effects) appears as “Crop and animal production” with a total GDP effect of $11,443 ($000). The importance of the indirect effects follows naturally since the model is demand propagated upstream to the industries that supply to the food processing industries. We observe as well a notable indirect effect in service industries (NAICS 4B-54). Output is gross; it contains all material used plus value-added (output columns: direct and total). In output, “manufacturing” and “crop and animal production” occupy the first positions in total production followed by trade industries and service industries (NAICS 1A and 3A-56).

The employment columns (direct effects) shows the direct effects of “employee jobs” and “all jobs”. Employee jobs relate to people on a payroll earning a salary. All jobs is the sum of employee jobs and self-employed people. We observe that retail trade (NAICS 4A) which is a labour intensive activity has most of its impact in the direct column (all jobs) with a value of 402 jobs. The indirect effects add only 22 more jobs for a total effect of 424 (total effects: all jobs). Manufacturing has a sizable increment. It’s direct jobs is 174 and total (direct and indirect) is 269 (direct and total effects: all jobs). This represents an increase of 55%. The indirect effect for all industries (see total in the last row) is quite important with a ratio of 2.14 (1455/680). This is reflected in the multipliers table 1.4 above. Another important industry worth noticing is “Crop and animal production”. It’s direct job is negligible since this industry starts

it's economic contribution (supplier to the food processing industries) in the second round of effects and up. On the other hand its total contribution of 315 reveals that it is split between 113 employee jobs and 202 self employed people (farmers).

This introduction should help the reader interpret correctly the meaning of each variable of the model report. The reader should use it as a guide to perform macro economic analysis. The reader can highlight by industry the components of GDP or other components by commodity of total supply and demand as a consequence of this shock. The report contains in addition environment results which show direct and total emissions of CO2 related to the shock in tables 2.8, 2.9, 3.8 and 3.9. The same tables provide the energy requirements in terajoules by type of energy.

In order to have access to the full report of this input-output simulation, the reader can communicate with Industry Accounts Division. In addition to the model report we provide a template that is used to prepare simulations specifications in order to run the model. For any questions related to the underlying concepts and methodology or in the interpretation of the report we invite the reader to contact the Industry Accounts Division of Statistics Canada toll free at 1-800-877-4623 or by e-mail at *iad-info-dci@statcan.ca*.

The model simulation presented above is from the National IO Model of Statistics Canada. We also operate an interprovincial model which contains the same features and the same detail as the national model. The interprovincial model makes an important contribution to industry analysis by province and territories. The international and interprovincial trade flow tables which are part of the Canadian IO framework make feasible the analysis of international trade by province and territory as well as trade between provinces and territory.

The advantages of these models are:

- they are easy to use;
- they provide a detailed report by important economic variables (GDP, output, employment, taxes, etc.);
- they are updated on an annual basis (latest year is 2002);
- they are widely used by the business sector, the academics and the government.

Data quality, concepts and methodology

Presentation of data

A. Contents of the input-output tables

In the Canadian System of National Accounts, the Input-Output Accounts have two sets of interrelated accounts:

(a) the Industry Accounts;

(b) the Commodity Accounts.

The Industry Accounts contain the commodity composition of industry output and its complete costs of production including profits (surplus). The Commodity Accounts, on the other hand, show the supply and disposition of goods and services. The framework of the Canadian Input-Output Tables is closely related to the one described in the United Nations report, System of National Accounts, 1993. The inputs and outputs of industries, classified by commodity, are presented in separate tables. The Canadian Input-Output Tables are rectangular rather than square since the number of goods and services exceeds the number of industries. Square tables have been an international standard for most countries from the beginning of Input-Output concepts. Square means having the same dimensions, either product-by-product tables or industry by industry. The product by product table shows which products are used in the production of which other products; the industry by industry table which is by far the most widely used shows which industry uses the output of which other industry. From our own rectangular framework we can build square tables: industry by industry and industry by categories of final demand.

For each year, three basic tables are prepared:

1. Make (Output) Matrix;

2. Use (Input) Matrix; and

3. Final Demand Matrix.

The Input-Output Accounts are prepared and balanced at the most detailed level known as the “Worksheet” (W) level, with 303 industries for the year 2001 and 2002. The number of goods and services and primary inputs add to 727 in 2001 and 2002. In the final demand, there are 172 categories for the years 2001 and 2002. The Worksheet (W) level data are then aggregated into Link (L), Medium (M), and Small (S) levels for consistency during the entire period as shown in the following table.

Text table 1
Dimension table

Designation of aggregation	Number of industries	Number of final demand categories	Number of goods and services and primary inputs
S (Small)	25	18	59
M (Medium)	62	37	111
L (Link)	117	122	469
W (Worksheet)	303	172	727

At the W, L and M levels of detail, some of the entries in various national matrices are confidential under the provisions of the Statistics Act. Consequently, data are provided to users after suppressing the confidential cells where applicable. The provincial tables are available at the "S" level of aggregation only and cell suppression is performed at that level.

The tables in the present publication are at the S level of aggregation, covering 51 goods and services and 8 primary inputs, (a total of 59), 25 industries and 18 final demand categories[1]. The concordances among the various levels of aggregation for industries, goods and services and primary inputs are provided in the Appendix A.

B. Understanding the content of the national input-output tables

The section presented here highlights the descriptive and the analytical usefulness of input-output data, using a series of examples. Observed relationships between industries producing several goods and services and various users of these goods and services allow establishing meaningful economic relationships. A number of possible applications of the data are also offered. The examples are meant to familiarize the reader with the richness of the basic data as well as their potential for various analytical uses. For simplicity we present the data content using the **National Input-Output Tables** . The same demonstration applies to the provincial tables as well.

The illustration uses one industry "manufacturing", and one commodity, "petroleum & coal products", at the S level of aggregation. Utilizing data for 2002 (tables 7, 8 and 9), the industry can be identified as column 8 of the Make and Use Matrices and the commodity as row 26 in the Make, Use and Final Demand Matrices.

i. Producers

ii. Users

iii. Composition of outputs and inputs

iv. Gross domestic product (GDP) by industry

v. Gross domestic product (GDP) for the total economy

vi. Domestic availability of goods and services

vii. Import shares

viii. Export shares

ix. Indirect taxes and subsidies

1. *The final demand categories reflect mainly spending by consumers, fixed capital formation, inventories and imports and exports.*

(i) Producers

The simple question, "who produces what?" is easily answered by referring to the Make Matrix where each row shows the distribution of output of each commodity by industry and where each column lists the distribution of output of each industry by commodity. For example, one may find that in 2002 the manufacturing industry (column 8 of the Make Matrix) produced $34,748 million of petroleum and coal products (row 26) whereas all domestic industries combined (row 26 in the last column of the Make Matrix) produced $38,547 million of that commodity. Thus, the manufacturing industry accounted for 90.1 percent of the total domestic production of this commodity in 2002 (34,748 / 38,547) x 100 = 90.1 percent.

(ii) Users

The Input-Output Tables display the demand for various goods and services which may be used as intermediate inputs (goods and services that are purchased by an industry from other industries to produce its outputs) or for final consumption by persons, governments, etc. So, the question, "who buys what?" is answered by referring to the Use (Input) and Final Demand Matrices. Elements in the row of the Use Matrix show the use of a particular commodity by various industries whereas elements of the same row appearing in the Final Demand Matrix indicate its use by various categories of final demand. For example, in 2002, altogether, industries used petroleum and coal products worth $23,734 million – the sum of row 26 across the columns of the Use Matrix. Individual entries across row 26 represent individual uses by the industry shown as a column.

(iii) Composition of outputs and inputs

The detailed presentation of data on outputs and inputs presented in this publication permits analysis of the composition of outputs and inputs of each industry over time. Once again, using the Make Matrix, one is able to observe, say for 2002, that the total output of the manufacturing industry (column 8) amounted to $590,087 million. Of this, petroleum and coal products accounted for $34,748 million which represents 5.9 percent of the total output of that industry. In a similar manner, inputs that are needed to produce outputs of industries can be identified in the Use Matrix. For example, column 8 of the Use Matrix lists various inputs needed to produce the output of the manufacturing industry. The magnitude of changes in the value of inputs over time can be identified and analyzed.

(iv) Gross domestic product (GDP) by industry

Generally speaking, the gross output of an industry consists of the value of the goods and services produced by that industry: the value of steel produced by the steel industry; the value of cars and trucks produced by the motor vehicles manufacturing industry; etc. A brief reflection tells us that, for example, the production of steel requires coal and iron ore and other inputs. These goods and services are not the products of steel mills. Rather, they are produced by other industries and used by the steel mills as their inputs. Thus, a measure of the unduplicated production of an industry should exclude all intermediate inputs purchased from other industries. This measure is called value added or Gross Domestic Product.

The Use Matrix displays all the costs incurred in production by an industry: the goods and services used as intermediate inputs; indirect taxes and subsidies; and returns to the factors of production (rows 56 to 59 of the Use Matrix), namely: wages and salaries, supplementary labour income, mixed income and other operating surplus.

(v) Gross domestic product (GDP) for the total economy

There are two measures of the Gross Domestic Product which provide valuation of the production of goods and services at different levels. They are:

(a) Gross Domestic Product at Basic Price

(b) Gross Domestic Product at Market Prices.

The valuation at basic price is the internationally preferred method to value the cost of factors of production used in the production process. Market price valuation reflects actual costs to the users. It is a concept that is used to measure consumption. The difference between the two concepts is the value of taxes on products, net of subsidies. GDP at basic price can be calculated from the (IO) Tables. In the detailed tables we distinguish eight elements in the primary inputs which can be used to calculate bothe the GDP at market price and the GDP basic price. The detailed list of these primary inputs is as follows: indirect taxes on products; subsidies on products; subsidies on production; indirect taxes on production; wages and salaries; supplementary labour income; mixed income and other operating surplus.

It is important to note that the valuation at basic price is the internationally preferred method to value the cost of factors of production used in the production process. Market price valuation reflects actual costs to the users. It is a concept that is used to measure consumption. The difference between the two concepts is the value of taxes on products, net of subsidies. GDP at basic price can be calculated from the IO Tables. In all IO tables we distinguish eight elements in the primary inputs which can be used to calculate both the GDP at market price and the GDP basic price. The detailed list of these primary inputs is as follows:

- Indirect taxes on products;
- Subsidies on products (-);
- Subsidies on production (-);
- Indirect Taxes on production;
- Wages and salaries;
- Supplementary labour income;
- Mixed income;
- Other operating surplus.

To calculate GDP at market price all the components above must be added while the GDP basic price is obtained by summing the last six components of the same list.

When evaluated at basic prices, an industry's GDP is the sum of its factor incomes (wages and salaries, supplementary labour income, mixed income and other operating surplus) plus taxes less subsidies on production (labour and capital).

Basic Price valuation represents the earnings of the factors of production as measured by the costs of labour (wages and salaries, supplementary labour income); capital inputs (mixed income and other operating surplus); plus indirect taxes on factors of production less subsidies on production. Indirect taxes on products (row 52) are a cost to the industry and are reflected in the market price of goods and services produced by the industry. Subsidies on products (row 53), where applicable, have the effect of lowering cost to the firms receiving them, and thus reduce the market prices of goods and services produced by the industry. They are shown as negative (-) entries in the Use (Input) Matrix. Both indirect taxes and subsidies on products and on production affect the market price valuation of goods and services.

It should be noted that indirect taxes are paid not only by the business sector but also by other sectors of the economy which are covered in the Final Demand Matrix of this publication. Subsidies, by definition, apply only to the business sector of the economy.

The GDP at Market Prices as calculated from a revenue approach is called income-based GDP and from an expenditure approach is called expenditure based GDP. The Input-Output Accounts also incorporate components of expenditure-based GDP and is obtained by summing up personal expenditure, capital formation, government current expenditure, change in the value of inventories and net exports (exports less imports) appearing in the Final Demand Matrix. In the Final Demand Matrix, these categories are shown at a finer level of detail.

(vi) Domestic availability of goods and services

It may be of interest to know the domestic availability of a particular commodity (or all goods and services) for one or many years. The domestic availability of a commodity is defined as total production less exports plus imports (assuming no inventory change). These values can be read directly from the Input-Output Tables. In 2002, the domestic production of petroleum and coal products was $38,547 million (last column of the Make (Output) Matrix) while total exports were $8,811 million (column 14 of the Final Demand Matrix) and imports were $4,625 million (column 16 of the Final Demand Matrix). Thus, the domestic availability of this product can be derived as: $38,547 million domestic production - $8,811 million exports + $4,625 million imports = $34,361 million.

(vii) Import share

The data used in the preceding section also allow the calculation of the import share of a commodity, that is, what portion of the domestic availability of a commodity comes from foreign countries. From these data, the import share for the same commodity can be calculated as follows:

(Total imports / Total domestic availability) x 100

that is for 2002:

(4,625 / 34,361) x 100 = 13.5 percent.

(viii) Export share

For countries with considerable foreign trade like Canada, there is a keen interest in measures of export intensity. A simple indicator of such an intensity is the proportion of total domestic production that is exported. Using the same commodity as in the previous illustrations, 22.9 percent of the domestic production of petroleum and coal products was exported in 2002 as follows:

(8,811 / 38,547) x 100 = 22.9 percent.

(ix) Indirect taxes and subsidies

In compiling Input Output Accounts at producers' prices and purchasers' prices, the costs or margins that arise between the value received by the producer (i.e. the value that covers all costs of production) and the value paid by the purchaser must be identified. One of these margins is the value of commodity taxes paid by the purchaser, be it an industry or a category of final demand. All commodity indirect taxes and all other indirect taxes are classified to the industry or final demand category paying them. The total of such taxes agrees with values published in the National Economic and Financial Accounts (Catalogue 13-001-XPB) but the Input Output Accounts provide additional information such as the industries and final demand categories which pay these taxes. Similarly, in the Input-Output Tables, subsidies are allocated to the industries receiving them. Also, from 1986 onwards, subsidies are broken down into two categories: commodity subsidies and non-commodity subsidies. These details and their routing in the Input-Output Accounts make additional analyses possible, e.g., to determine the effects of taxes and subsidies, to build certain policy simulation models, etc.[2]

Data Accuracy Measures

Data from Input-Output Accounts presented in this publication are assessed for relative statistical reliability and assigned a rating that indicates the level of confidence with which they may be used. 1The ratings refer to data for the latest benchmark year for which estimates are published. The ratings are 'A' for the most reliable data, 'B' for reliable data, and 'C' for data that is less reliable but still acceptable. The ratings are determined for outputs,

2. *See for example Durand, René and Rioux, Ronald: "Estimating Final Demand Expenditure at Factor Cost and Net Prices Indices", Economic Systems Research: Vol. 6, No. 3, 1994, pages 265-275.*

intermediate inputs and GDP components of each Link or 'L' level input-output industry. The ratings apply to entire vectors, rather than individual data points. For instance, a rating of 'A' or most reliable applies to all outputs of the Crop and animal production industry, whereas the industry's intermediate input vector as a whole is assigned a 'B' rating. The industry's GDP components are also assigned a 'B" rating.

Data reliability ratings are a product of data integration and analysis inherent in the compilation of input-output tables. They rely both on the quantitative attributes of the survey and administrative data sources that are used, such as sample size, response rate and coefficient of variation, and on the expert judgement of analysts who undertake data integration of various source data. In general, the highest quality rating is assigned to a data set that originates from a survey or administrative source with the largest sample size and smallest undercoverage that requires no indirect estimation of missing detail. A reliable or 'B' rating is assigned to a data set estimated from source data with some but not all of the above attributes. Finally, data sets with a 'C' rating involve significant application of indirect estimation techniques and rely on source data with small samples, undercoverage, or both.

Manufacturing	S	3A	31-33
Food manufacturing	M	311	311
Animal food manufacturing	L	3111	3111
Animal food manufacturing	W	311100	3111
Sugar and confectionery product manufacturing	L	3113	3113
Sugar manufacturing	W	311310	31131
Confectionery product manufacturing	W	3113A0	31132-31134
Fruit and vegetable preserving and specialty food manufacturing	L	3114	3114
Frozen food manufacturing	W	311410	31141
Fruit and vegetable canning, pickling and drying	W	311420	31142
Dairy product manufacturing	L	3115	3115
Dairy product manufacturing	W	311500	3115
meat product manufacturing	L	3116	3116
Animal (except poultry) slaughtering	W	311611	311611
Rendering and meat processing from carcasses	W	311614	311614
Poultry processing	W	311615	311615
Seafood product preparation and packaging	L	3117	3117
Seafood product preparation and packaging	W	311700	3117
Miscellaneous food manufacturing	L	311A	3112, 3118, 3119
Flour milling and malt manufacturing	W	311210	31121
Starch and vegetable fat and oil manufacturing	W	311220	31122
Breakfast cereal manufacturing	W	311230	31123
Bread and bakery product manufacturing	W	311810	31181
Cookie and cracker manufacturing	W	311821	311821
Flour mixes and dough manufacturing from purchased flour	W	311822	311822
Dry pasta and tortilla manufacturing	W	31182A	311823, 31183
Snack food manufacturing	W	311910	31191
Coffee and tea manufacturing	W	311920	31192
Other miscellaneous food manufacturing	W	3119A0	31193, 31194, 31199
Beverage and tobacco product manufacturing	M	312	312
Soft drink and ice manufacturing	L	312A	31211
Soft drink and ice manufacturing	W	312110	31211
Breweries	L	312B	31212
Breweries	W	312120	31212
Wineries	L	312C	31213
Wineries	W	312130	31213
Distilleries	L	312D	31214
Distilleries	W	312140	31214
Tobacco manufacturing	L	3122	3122
Tobacco manufacturing	W	312200	3122
Textile and textile product mills	M	31A	313, 314
Textile and textile product mills	L	31A0	313, 314
Fibre, yarn and thread mills	W	313100	3131
Fabric mills	W	313200	3132
Textile and fabric finishing and fabric coating	W	313300	3133
Carpet and rug mills	W	314110	31411
Curtain and linen mills	W	314120	31412
Textile bag and canvas mills	W	314910	31491
All other textile product mills	W	314990	31499
Clothing manufacturing	M	315	315
Clothing manufacturing	L	3150	315
Hosiery and sock mills	W	315110	31511
Other clothing knitting mills	W	315190	31519
Cut and sew clothing contracting	W	315210	31521
Men's and boys' cut and sew clothing manufacturing	W	315220	31522

See footnotes at the end of the table.

Identification code and title	Level	Code	Naics definition
Women's and girls' cut and sew clothing manufacturing	W	315230	31523
Other cut and sew clothing manufacturing	W	315290	31529
Clothing accessories and other clothing manufacturing	W	315900	3159
Leather and allied product manufacturing	M	316	316
Leather and allied product manufacturing	L	3160	316
Leather and hide tanning and finishing	W	316100	3161
Footwear manufacturing	W	316200	3162
Other leather and allied product manufacturing	W	316900	3169
Wood product manufacturing	M	321	321
Wood product manufacturing	L	3210	321
Sawmills and wood preservation	W	321100	3211
Structural wood product manufacturing	W	321215	321215
Veneer and plywood mills	W	32121A	321211, 321212
Particle board, fibreboard, and waferboard mills	W	32121B	321216, 321217
Wood window and door manufacturing	W	321911	321911
Other millwork	W	321919	321919
Wood container and pallet manufacturing	W	321920	32192
All other wood product manufacturing	W	321990	32199
Paper manufacturing	M	322	322
Pulp, paper and paperboard mills	L	3221	3221
Pulp mills	W	322110	32211
Paper (except newsprint) mills	W	322121	322121
Newsprint mills	W	322122	322122
Paperboard mills	W	322130	32213
Converted paper product manufacturing	L	3222	3222
Paperboard container manufacturing	W	322210	32221
Paper bag and coated and treated paper manufacturing	W	322220	32222
Stationery product manufacturing	W	322230	32223
Other converted paper product manufacturing	W	322290	32229
Printing and related support activities	M	323	323
Printing and related support activities	L	3231	3231
Printing	W	323110	32311
Support activities for printing	W	323120	32312
Petroleum and coal products manufacturing	M	324	324
Petroleum and coal products manufacturing	L	3241	3241
Petroleum refineries	W	324110	32411
Asphalt paving, roofing and saturated materials manufacturing	W	324120	32412
Other petroleum and coal products manufacturing	W	324190	32419
Petroleum refineries and other petroleum and coal products manufacturing	Wd	3241X0	32411, 32419
Chemical manufacturing	M	325	325
Basic chemical manufacturing	L	3251	3251
Petrochemical manufacturing	W	325110	32511
Industrial gas manufacturing	W	325120	32512
Synthetic dye and pigment manufacturing	W	325130	32513
Other basic chemical manufacturing	W	3251A0	32518, 32519
Resin, synthetic rubber, and artificial and synthetic fibres and filaments manufacturing	L	3252	3252
Resin, synthetic rubber, and artificial and synthetic fibres and filaments manufacturing	W	325200	3252
Pesticides, fertilizer and other agricultural chemical manufacturing	L	3253	3253
Fertilizer manufacturing	W	325310	32531
Pesticide and other agricultural chemical manufacturing	W	325320	32532
Pesticides, fertilizer and other agricultural chemical manufacturing	Wd	325300	3253
Pharmaceutical and medicine manufacturing	L	3254	3254
Pharmaceutical and medicine manufacturing	W	325400	3254
Miscellaneous chemical product manufacturing	L	325A	3255, 3256, 3259
Paint and coating manufacturing	W	325510	32551
Adhesive manufacturing	W	325520	32552
Soap and cleaning compound manufacturing	W	325610	32561
Toilet preparation manufacturing	W	325620	32562
Other chemical product manufacturing	W	325900	3259
Plastics and rubber products manufacturing	M	326	326
Plastic product manufacturing	L	3261	3261
Unsupported plastic film, sheet and bag manufacturing	W	326110	32611
Plastic pipe, pipe fitting and unsupported profile shape manufacturing	W	326120	32612
Laminated plastic plate, sheet and shape manufacturing	W	326130	32613

See footnotes at the end of the table.

Identification code and title	Level	Code	Naics definition
Plastic bottle manufacturing	W	326160	32616
Polystyrene, urethane and other foam product manufacturing	W	3261A0	32614, 32615
Motor vehicle plastic parts manufacturing	W	326193	326193
Miscellaneous plastic product manufacturing	W	32619A	326191, 326198
Rubber product manufacturing	L	3262	3262
Tire manufacturing	W	326210	32621
Rubber and plastic hose and belting manufacturing	W	326220	32622
Other rubber product manufacturing	W	326290	32629
Non-metallic mineral product manufacturing	M	327	327
Cement and concrete product manufacturing	L	3273	3273
Cement manufacturing	W	327310	32731
Ready-mix concrete manufacturing	W	327320	32732
Concrete product manufacturing	W	3273A0	32733, 32739
Miscellaneous non-metallic mineral product manufacturing	L	327A	3271, 3272, 3274, 3279
Clay product and refractory manufacturing	W	327100	3271
Glass and glass product manufacturing	W	327200	3272
Lime and gypsum product manufacturing	W	327400	3274
Other non-metallic mineral product manufacturing	W	327900	3279
Primary metal manufacturing	M	331	331
Primary metal manufacturing	L	3310	331
Iron and steel mills and ferro-alloy manufacturing	W	331100	3311
Iron and steel pipes and tubes manufacturing from purchased steel	W	331210	33121
Rolling and drawing of purchased steel	W	331220	33122
Primary production of alumina and aluminum	W	331313	331313
Aluminum rolling, drawing, extruding and alloying	W	331317	331317
Non-ferrous metal (except aluminum) smelting and refining	W	331410	33141
Non-ferrous metal (except aluminum) rolling, drawing, extruding and alloying	W	3314A0	33142, 33149
Ferrous metal foundries	W	331510	33151
Non-ferrous metal foundries	W	331520	33152
Fabricated metal products manufacturing	M	332	332
Fabricated metal product manufacturing	L	3320	332
Forging and stamping	W	332100	3321
Cutlery and hand tool manufacturing	W	332200	3322
Prefabricated metal building and component manufacturing	W	332311	332311
All other plate work and fabricated structural product manufacturing	W	33231A	332314, 332319
Ornamental and architectural metal products manufacturing	W	332320	33232
Power boiler and heat exchanger manufacturing	W	332410	33241
Metal tank (heavy gauge) manufacturing	W	332420	33242
Metal can, box and other metal container (light gauge) manufacturing	W	332430	33243
Hardware manufacturing	W	332500	3325
Spring and wire product manufacturing	W	332600	3326
Machine shops	W	332710	33271
Turned product and screw, nut and bolt manufacturing	W	332720	33272
Coating, engraving, heat treating and allied activities	W	332800	3328
Other fabricated metal product manufacturing	W	332900	3329
Machinery manufacturing	M	333	333
Machinery manufacturing	L	3330	333
Agricultural implement manufacturing	W	333110	33311
Construction machinery manufacturing	W	333120	33312
Mining and oil and gas field machinery manufacturing	W	333130	33313
Industrial machinery manufacturing	W	333200	3332
Commercial and service industry machinery manufacturing	W	333300	3333
Ventilation, heating, air-conditioning and commercial refrigeration equipment manufacturing	W	333400	3334
Metalworking machinery manufacturing	W	333500	3335
Engine, turbine and power transmission equipment manufacturing	W	333600	3336
Pump and compressor manufacturing	W	333910	33391
Material handling equipment manufacturing	W	333920	33392
All other general-purpose machinery manufacturing	W	333990	33399
Industrial, commercial and service industry machinery manufacturing	Wd	333X00	3332, 3333
Computer and electronic product manufacturing	M	334	334
Computer and peripheral equipment manufacturing	L	3341	3341
Computer and peripheral equipment manufacturing	W	334100	3341
Electronic product manufacturing	L	334A	3342-3346
Telephone apparatus manufacturing	W	334210	33421

See footnotes at the end of the table.

1. The small (S) level industrial categories are expressed by a 2 character identification code
2. The medium (M) level industrial categories are expressed by a 3 character identification code
3. The historical link (L) level industrial categories are expressed by a 4 character identification code
4. The worksheet (W) level industrial categories are expressed by a 6 character identification code
5. The worksheet (Wd) code refers to a special "W" level aggregation for dissemination.

Note: *The data contents of W GS7000 are found in W NP1900. As soon as data becomes available for Naics 914, a structure will be introduced at the S, M and L levels.*

1. The small (S) level commodities are expressed by a sequential number from 1 to 59.
2. The medium (M) level commodities are expressed by a sequential number from 1 to 111.
3. The link (L) level commodities are expressed by a sequential number from 1 to 469.
4. The worksheet (W) level commodities are expressed by a mnemonic code.
5. The worksheet (Wd) code refers to a special “W” level aggregation of commodities for dissemination.

Note: *The data contents of W GS7000 are found in W NP1900. As soon as data becomes available for Naics 914, a structure will be introduced at the S, M and L levels.*

Leather goods and other personal effects	W	PE042
Personal expenditures, non-durable goods	S	3
Personal expenditures, food and non-alcoholic beverages	M	6
Personal expenditures, food and non-alcoholic beverages	L	1
Food and non-alcoholic beverages	W	PE0011
Food (imputed)	W	PE0012
Personal expenditures, motor fuels and lubricants	M	7
Personal expenditures, motor fuels and lubricants	L	31
Motor fuels and lubricants	W	PE031
Personal expenditures, electricity, natural gas and other fuels	M	8
Personal expenditures, electricity	L	13
Electricity	W	PE013
Personal expenditures, natural gas	L	14
Natural gas	W	PE014
Personal expenditures, other fuels	L	15
Other fuels	W	PE015
Personal expenditures, other non-durable goods	M	9
Personal expenditures, alcoholic beverages bought in stores	L	2
Alcoholic beverages bought in stores	W	PE002
Personal expenditures, tobacco products	L	3
Tobacco products	W	PE003
Personal expenditures, non-durable household supplies	L	21
Non-durable household supplies	W	PE021
Personal expenditures, drugs and pharmaceutical products	L	27
Drugs and pharmaceutical products	W	PE027
Personal expenditures, toilet articles and cosmetics	L	43
Toilet articles and cosmetics	W	PE043
Personal expenditures, services	S	4
Personal expenditures, gross rent (imputed and paid)	M	10

See footnotes at the end of the table.

Text table 5 – continued

Hierarchical Structure of the Input-Output Final Demand Categories Small (S), Medium (M), Historical Link (L) and Worksheet (W) Level Aggregations

Identification code and title	Level	Code
Personal expenditures, gross imputed rent	L	10
Gross imputed rent	W	PE010
Personal expenditures, gross rent paid	L	11
Gross rent paid	W	PE011
Personal expenditures, restaurants and accommodation services	M	11
Personal expenditures, restaurants and accommodation services	L	45
Restaurants and accommodation services	W	PE045
Personal expenditures, net expenditure abroad	M	12
Personal expenditures, travel expenditures, exports	L	48
Travel expenditures, international exports	W	PE0482
Travel expenditures, inter-provincial exports	W	PE0484
Personal expenditures, travel expenditures, imports	L	49
Travel expenditures, international imports	W	PE0481
Travel expenditures, inter-provincial imports	W	PE0483
Personal expenditures, other services	M	13
Personal expenditures, men's and boy's clothing, repair and alteration	L	5
Men's and boy's clothing, repair and alterations	W	PE005
Personal expenditures, women's and children's clothing, repair and alterations	L	7
Women's and children's clothing, repair and alterations	W	PE007
Personal expenditures, shoe repair	L	9
Shoe repair	W	PE009
Personal expenditures, other shelter expenses	L	12
Other shelter expenses	W	PE012
Personal expenditures, upholstery and furniture repair	L	17
Upholstery and furniture repair	W	PE017
Personal expenditures, household equipment repairs	L	19
Household equipment repairs	W	PE019
Personal expenditures, domestic and child care services	L	22
Domestic and child care services	W	PE022
Personal expenditures, other household services	L	23
Other household services	W	PE023
Personal expenditures, medical care	L	24
Medical care	W	PE024
Personal expenditures, hospital care and the like	L	25
Hospital care and the like	W	PE025
Personal expenditures, accident and sickness insurance	L	26
Accident and sickness insurance	W	PE026
Personal expenditures, motor vehicle repairs	L	30
Motor vehicle repairs	W	PE030
Personal expenditures, other motor vehicle related services	L	32
Other motor vehicle related services	W	PE032
Personal expenditures, purchased transportation	L	33
Purchased transportation	W	PE033
Personal expenditures, communications	L	34
Communications	W	PE034
Personal expenditures, recreation equipment repair and rentals	L	36
Recreation equipment repair and rentals	W	PE036
Personal expenditures, recreational services	L	38
Recreational services	W	PE038
Personal expenditures, educational and cultural services	L	39
Educational and cultural services	W	PE039
Personal expenditures, jewellery and watch repair	L	41
Jewellery and watch repair	W	PE041
Personal expenditures, personal care	L	44
Personal care	W	PE044
Personal expenditures, financial, legal and other services	L	46
Financial, legal and other services	W	PE046
Personal expenditures, operating expenditures of non-profit organizations serving households	L	47
Operating expenditures of non-profit institutions serving households	W	PE047

See footnotes at the end of the table.

1. The small (S) final demand categories are expressed by a sequential number from 1 to 18.
2. The medium (M) final demand categories are expressed by a sequential number from 1 to 41.
3. The link (L) final demand categories are expressed by a sequential number from 1 to 125.
4. The worksheet (W) level final demand categories are expressed by a mnemonic code.

Description of tables in a simulation

This is the complete list of tables generated in a typical run of the National IO model. For the example in the overview we used only the summary tables 1.1 to 1.5 (text tables 1 to 5)plus some data extracted from small level tables 2.1 to 2.9 (text table 6). The tables 3.1 to 3.9 and 4.1 to 4.7 represent respectively the medium level tables and the worksheet tables of the model report. For more information or a detailed report, please contact the Industry accounts Division toll-free at 1-800-877-4623 or by e-mail at *iad-info-dci@statcan.ca,*

- 1 Summary of impact
- 1.1 Summary of shock
- 1.2 Impact on GDP
- 1.3 Impact on primary and intermediate inputs
- 1.4 Ratios and multipliers
- 1.5 Taxes on products by type of tax
- 2 Industry and commodity detail of impact, Small aggregation
- 2.1 Direct GDP
- 2.2 Total GDP
- 2.3 Direct and total employment
- 2.4 Direct supply and demand by industry
- 2.5 Total supply and demand by industry
- 2.6 Direct supply and demand by commodity

- 2.7 Total supply and demand by commodity
- 2.8 Direct emissions and energy use
- 2.9 Total emissions and energy use
- 3 Industry and commodity detail of impact, Medium aggregation
- 3.1 Direct GDP
- 3.2 Total GDP
- 3.3 Direct and total employment
- 3.4 Direct supply and demand by industry
- 3.5 Total supply and demand by industry
- 3.6 Direct supply and demand by commodity
- 3.7 Total supply and demand by commodity
- 3.8 Direct emissions and energy use
- 3.9 Total emissions and energy use
- 4 Industry and commodity detail of impact, Worksheet level
- 4.1 Direct GDP
- 4.2 Total GDP
- 4.3 Direct and total employment
- 4.4 Direct supply and demand by industry
- 4.5 Total Supply and demand by industry
- 4.6 Direct supply and demand by commodity
- 4.7 Total supply and demand by commodity

List of Wd codes with their aggregation in terms of W level mnemonic codes

03602X	0330, 03602
