## Hog inventories

### First quarter 2002

Canadian hog inventories declined marginally during the first three months of 2002 despite the strong export demand and favourable prices experienced in 2001. During the first quarter of 2002 the hog markets became increasingly bearish.

Producers reported 13.2 million head on their farms as of April 1, 2002. This was just 0.1% below January 1, 2002, but 4.1% higher than the same time last year.

Data came from the April Hog Survey, a telephone survey of 2,500 hog producers who were asked to report the number of hogs they had on their farm as of April 1, 2002.

*Note: Figures may not add up to totals due to rounding.*

Western Canadian farmers were responsible for the entire expansion, even though there are more hogs in the East. Inventories in the West climbed 11% over the year to a record 5.8 million hogs. Manitoba alone was responsible for an additional 329 thousand hogs, a 16% increase, as producers responded to demand on both sides of the border.

The majority of the hogs, 7.4 million, were on Eastern farms, principally in Quebec and Ontario, the two largest hog-producing provinces. The East accounted for 56% of the national total. Eastern inventories are 1.0% lower than April last year.

Hogs sales are an important component of farm cash receipts. In 2001, hog receipts grew 14% to \$3.8 billion, which was 38% above the previous five-year average. Most of the increase was due to revenue generated from domestic slaughter, as prices rose and marketings reached record levels. Receipts from export sales, mostly to the United States, rose 24%.

The Canadian hog sector has expanded by over 30% since 1990. Inventories in the West climbed 48%, while Eastern expansion was limited to 19%. During the same period, the number of hogs on American farms rose by a more modest 15%.

Canadian hog producers have benefited from a number of factors. Prices improved in 2000, buoyed by favourable exchange rates and increasing demand from the United States. The sector has been expanding since the mid-1990s, which coincides with freer trade. Also, in Western Canada the demise in 1995 of the Crow Rate that subsidized the transportation of western grain gave a comparative advantage to producers closer to feed supplies.

## **Red meat consumption**

2001

Record supplies of beef in Canada were not sufficient to offset record exports as per-capita consumption plunged to its lowest level in four decades. In 2001 each Canadian consumed an estimated 22.4 kg of beef, down 4.3% from the previous year as prices continued to climb. Per-capita consumption of pork however, edged up 1.4% over 2000 to 22.0 kg. The increase was based primarily on record supplies.
