Ordering and subscription information

This product, Catalogue no. 23-603-XIE, is published quarterly in electronic format on the Statistics Canada Internet site at a price of CDN \$34.00 per issue and CDN \$112.00 for a one-year subscription. To obtain single issues or to subscribe visit our Web site at www.statcan.ca, and select Products and Services.

This product is also available in print through a Print-on-Demand service, at a price of CDN \$55.00 per issue and CDN \$196.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CDN \$ 6.00	CDN \$24.00
Other countries	CDN \$ 10.00	CDN \$40.00

All prices exclude sales taxes.

The printed version can be ordered by

- Phone (Canada and United States) **1 800 267-6677**
- Fax (Canada and United States) **1 877 287-4369**
- E-mail **order@statcan.ca**

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and good will.

A Geographic Profile of Canadian Livestock

Livestock estimates

January 1, 2003

Two years of drought in western Canada have taken their toll on Canada's cattle herd, especially in Alberta. As of January 1, 2003, farmers reported 13.4 million head on their farms, down 2.8% from 13.8 million at the same time in 2002.

Meanwhile, the slowdown in the growth of Canada's hog herd, which began early in 2002, continued throughout the rest of the year. Hog producers reported 14.7 million head on farms as of January 1, 2003, up 2.5% over the previous year. Growth has averaged 5.0% over the past five years.

Farmers also reported 975,600 sheep on their farms as of January 1, 2003, down 1.8% from the previous January.

Livestock inventories at January 1						
000's of head	Cattle		Hogs		Sheep and Lambs	
	2002	2003	2002	2003	2002	2003
Canada	13,762	13,372	14,367	14,726	994	976
Atlantic	292	289	390	383	32	33
Quebec	1,286	1,310	4,291	4,280	225	230
Ontario	2,026	2,160	3,525	3,661	266	280
Manitoba	1,245	1,250	2,688	2,870	76	74
Saskatchewan	2,418	2,443	1,180	1,230	117	115

British Columbia	670	700	168	162	59	57

Note: Due to rounding, totals may not add

Alberta beef ranchers hit hard by drought

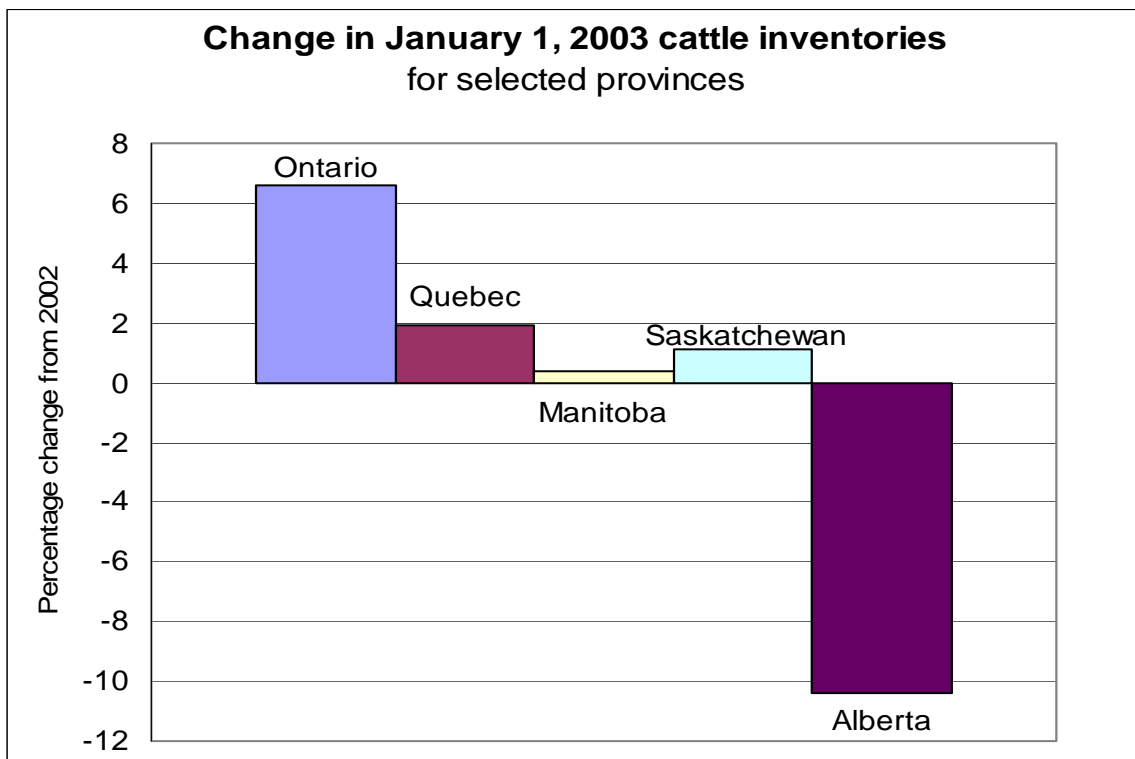

Alberta's beef ranchers have been hit hard by two years of drought. As of January 1, 2003, the province's cattle herd was 10.4% below levels of a year earlier in the wake of dwindling feed supplies and soaring feed prices.

Alberta accounts for over 40.0% of the national cattle herd.

Increases in cattle inventories reported in other provinces, fuelled partly by the prospect of strengthening prices for cattle, were not sufficient to offset the declines in Alberta.

Cattle inventories in Saskatchewan rose 1.1%, while those in Manitoba were up a modest 0.4% and those in British Columbia climbed 4.5%.

More feeder cattle were shipped to Ontario where feed supplies were plentiful, and as a result, Ontario's inventories increased 6.6%. In Quebec, the cattle herd grew by 1.9%.

Supplies of barley, the primary feed grain in western Canada, plunged because of the drought. In 2002, the harvest in western Canada declined 36.4%, following a 20.7% drop the year before.

The shortage of feed grains last year forced western farmers to import an unprecedented 2.1 million metric tonnes of grain corn from the United States during the first 11 months of 2002.

The drought also forced many producers to sell or ship their animals to other provinces and to the United States. Exports from Alberta to other provinces

almost tripled to 243,200 head between July and December last year compared with the same period in 2001.

Meanwhile, cattle shipments from other provinces into Saskatchewan surged to 167,800 head, while shipments into Ontario were up 17.6%.

Trade with United States was also hit by the drought. Between July and December last year, cattle exports to the United States soared 43.7% to 985,000 head. Saskatchewan accounted for most of this increase in exports, as cattle moved next door from Alberta, and were then exported either to other provinces or south of the border.

At the same time, imports virtually ground to a halt. During the last six months of 2002, only 39,500 head of cattle arrived in Canada, less than one-third the level of 141,800 imported during the same six months of the previous year. Alberta, which imported 94,900 head during the second half of 2001, got virtually nothing during the same time period in 2002.

Breeding herd remains stable despite drought

Despite the drought, Canada has maintained its breeding herd. On January 1, 2003, farmers reported 4.6 million beef cows on their farms, a modest 0.4% decrease.

A 5.8% decline in Alberta's beef cow population was offset by expansion in Saskatchewan, Manitoba, Ontario and Quebec, as some producers held back more heifers as opposed to shipping them for slaughter. Beef calving in the first six months of 2003 is expected to reflect this expansion.

The cattle industry has three distinct types of operation, reflecting the various stages of growth in the animals: cow-calf, feeder-stocker and feeding. The shortage of water and forage, primarily in Alberta and Saskatchewan, forced several cow-calf operators to decrease or sell their herds. Cattle inventories held by cow-calf operators in Alberta declined 11.3%, while national level inventories on these breeding operations fell 3.4%.

As of January 1, 2003, the number of Canadian beef cattle reported by feeder and stocker/finisher operations (backgrounding) rose 3.3% over 2002, and 14.6% over 2001. Inventories on feeding operations in Alberta tumbled 21.6% to 925,000 head as of January 1, 2003. These operations were particularly hit by the drought that resulted in lower feed supplies and higher feed costs.

During the last six months of 2002, slaughter levels actually fell 3.1% to an estimated 1.9 million cattle. Quebec and Ontario accounted for most of the decrease, which was partly the result of Ontario producers retaining cattle to

further herd expansion. Declines in inventories as of January 1, 2003 indicate declining meat production for the year.

Hog inventories: Pace of growth slows

The pace of growth in the hog sector slowed during the last three months of 2002, largely because of lower hog prices and rising feed costs. In addition, expansion was limited by a two-year moratorium on hog barn construction in Quebec, the nation's leading hog-producing province.

The American hog and pork markets have a major impact on the Canadian hog industry. The sharp decline in the American price for hogs since the start of 2002 triggered a drop in hog prices on the Canadian market.

Falling prices in the United States reflect a slowdown in the disposition of pork supplies and a higher slaughter volume. Canadian average hog prices in the second half of 2002 were about 23.0% lower than the same period last year.

Available on CANSIM: tables 003-0004, 003-0030, 003-0031 and 003-0032.

The report *Livestock statistics* (23-603-XIE, \$34/\$112); *Cattle statistics* (23-012-XIE, free); *Hog statistics* (23-010-XIE, free); and *Sheep statistics* (23-011-XIE, free) will be available in February 2003.

Livestock Statistics – Concepts and Methods

Concepts

Inventory levels of the various types of livestock intended for sale in Canada are measured at specific times throughout the year. Surveyed operations are requested to include all animals located on the farming operation, regardless of ownership. They are also asked to include animals owned but pastured on a community pasture, grazing co-op or public land. Producers are asked to exclude animals owned but kept on a farm, ranch or feedlot operated by someone else. Inventory levels are estimated for cattle, calves, pigs, sheep and lambs. Estimates are also produced for certain categories of animals on the basis of age, sex, weight and/or purpose i.e. breeding or slaughter.

Current information on livestock inventories and related statistics such as supply and disposition enable those active in the agricultural sector to observe and assess changes in the industry, measure performance and keep the agricultural community and general public informed of developments. The primary data users are federal and provincial governments, producer boards, farmers and farm organizations, private business, academic research institutions and students. Livestock data assists governments in formulating agricultural policies and developing programs. Farming organizations use statistics in developing recommendations for producers and governments. Farmers make increasing use of prices, production, and marketing statistics in planning their operations. In addition, these livestock statistics are used in the calculation of farm incomes and in the Canadian System of National Accounts for indicators such as gross domestic product.

Methods

To produce livestock estimates, there are actually 6 different survey occasions. All of the survey occasions collect data primarily using Computer Assisted Telephone Interviews (CATI) although there are special procedures in place for the very large or complex operations.

Two of the occasions are the January Livestock Survey and the July Livestock Survey. These are large-scale general livestock surveys collecting data on cattle, hogs, sheep and other livestock, referring to inventories at the 1st of the month. The probability samples include about 10,000 operations at January 1, and about 28,000 operations at July 1. These surveys collect data during a three-week period in the western provinces, Ontario and Quebec. Regardless of when operators respond, they are asked to report inventories as of January 1 or July 1. The livestock survey results are released, following processing and analysis, approximately seven weeks after the reference date.

Hog inventories are the focus of two other survey occasions collecting estimates of pig numbers at April 1 and October 1. This survey was initiated in 1998 as estimates from 1978 to 1997 were based solely on analytical tools. For the hog surveys, a sub-sample of the prior livestock survey is used. The probability samples are 2,500 at April 1 and October 1 and, similar to the livestock surveys, these CATI surveys cover the western provinces, Ontario and Quebec. Producers are requested to report their inventories as of the reference date, although the data are collected during a 7-day period near or before that date. The hog survey results are normally released three to four weeks after the reference date.

The June and November Atlantic Surveys are used to produce estimates for that region. These surveys are multi-purpose collecting data, primarily inventories, on livestock including cattle,

hogs and sheep in addition to collecting data related to the area, yield and production of the principal field crops. The probability samples are 1,300 in June and 2,200 in November with the data collected by telephone. The results are released at the same time as the livestock results. For reference points where surveys do not exist for the Atlantic region, analytical tools are used to produce the estimates.

Recently a new piece of information has been added to the cattle statistics allowing users a better understanding of the cattle industry. In essence, the total inventories are distributed, on the basis of survey results and sector level balance sheets, to a specific farm type. The two major categories are dairy and beef. The beef sector is then broken down to beef cattle on cow/calf and mixed beef and dairy operations; beef cattle on feeder, stocker/finish operations; and, beef cattle on feeding operations, which include feedlots.

To summarize, the livestock statistics are survey-based estimates. The survey relies on a list frame that is established every five years by the Census of Agriculture and updated to include new entrants, particularly large hog operations. The probability sample surveys are conducted by telephone. The survey results are analysed and corrected before the data are used to analyse the industry and fine-tune the estimates. The survey data are reviewed in a board environment before the commodity analyst works with the data primarily using supply-disposition analysis. The results of the industry analysis are reviewed by the board before being sent to the individual provinces. Once the data are finalised they are released to the public and published. The principal data released include inventories and summarized supply-disposition tables. The data also flow, via farm income estimates, to the Canadian System of National Accounts. In addition the data are used in the calculation of net farm income projections, produced by Agriculture and Agri-Food Canada in co-operation with Statistics Canada and the provinces.

GLOSSARY

3. Interprovincial Imports (Net)	A residual. It is arrived at by taking the number of animals coming to farms within that province minus the number of animals leaving for farming operations outside that province.
10. Interprovincial Exports (Net)	A residual. It is arrived at by taking the number of animals leaving for farming operations outside that province minus the number of animals coming to farms within that province.
12. F.P.I.S. by Province of Origin	Slaughtering at federally and / or provincially inspected packing plants.
13. Internat. Imports for Slaughter	Imports of live animals from the United States slaughtered in Canada.
14. Prov. Insp. Slight. (not in FPIS)	All provincially inspected slaughter not included in F.P.I.S.
15. Comm. Slight., n.e.s.	Other provincial slaughter not included above and not usually inspected.
16. Consumed on Farm	Killed and eaten on the farm.
17. Farm Sales to Consumers	Killed and sold at the farm gate.
19. Disposition	The sum of all deaths, condemnations, exports and slaughter.

Inventory at January 1 or July 1 refers to the number of animals on the farm or feedlot at January 1 or July 1 .

All other balance sheet items represent activity that occurred within the six month reporting period.

GLOSSARY

3. Interprovincial Imports (Net)	A residual. It is arrived at by taking the number of animals coming to farms within that province minus the number of animals leaving for farming operations outside that province.
10. Interprovincial Exports (Net)	A residual. It is arrived at by taking the number of animals leaving for farming operations outside that province minus the number of animals coming to farms within that province.
12. F.P.I.S. by Province of Origin	Slaughtering at federally and / or provincially inspected packing plants.
13. Internat. Imports for Slaughter	Imports of live animals from the United States slaughtered in Canada.
14. Prov. Insp. Slight. (not in FPIS)	All provincially inspected slaughter not included in F.P.I.S.
15. Comm. Slight., n.e.s.	Other provincial slaughter not included above and not usually inspected.
16. Consumed on Farm	Killed and eaten on the farm.
17. Farm Sales to Consumers	Killed and sold at the farm gate.
19. Disposition	The sum of all deaths, condemnations, exports and slaughter.

Inventory at January 1 or July 1 refers to the number of animals on the farm or feedlot at January 1 or July 1 .

All other balance sheet items represent activity that occurred within the six month reporting period.

GLOSSARY

3. Interprovincial Imports (Net)	A residual. It is arrived at by taking the number of animals coming to farms within that province minus the number of animals leaving for farming operations outside that province.
10. Interprovincial Exports (Net)	A residual. It is arrived at by taking the number of animals leaving for farming operations outside that province minus the number of animals coming to farms within that province.
12. F.P.I.S. by Province of Origin	Slaughtering at federally and / or provincially inspected packing plants.
13. Internat. Imports for Slaughter	Imports of live animals from the United States slaughtered in Canada.
14. Prov. Insp. Slight. (not in FPIS)	All provincially inspected slaughter not included in F.P.I.S.
15. Comm. Slight., n.e.s.	Other provincial slaughter not included above and not usually inspected.
16. Consumed on Farm	Killed and eaten on the farm.
17. Farm Sales to Consumers	Killed and sold at the farm gate.
19. Disposition	The sum of all deaths, condemnations, exports and slaughter.

Inventory at January 1 or July 1 refers to the number of animals on the farm or feedlot at January 1 or July 1 .

All other balance sheet items represent activity that occurred within the six month reporting period.

A Geographic Profile of Canadian Livestock, 1991-2001 ([Agriculture and rural working paper No.62](#))

February 2003

This study provides a snapshot of where livestock and poultry were at the time of both the 1991 and 2001 Censuses of Agriculture using geographical information systems (GIS). It analyzes livestock concentrations in terms of the total livestock population.

The report shows the following:

- As of May 15, 2001, 16.3% of Canada's livestock were located in high-density areas, that is, regions with a concentration of more than 70 "animal units" for every square kilometre of farmland. There were more livestock in such high-density areas than a decade ago.
- Quebec, Alberta and Ontario had the highest numbers of livestock in high-density areas, a total of 1.9 million animal units among the three.
- Just over 38% of the livestock in Quebec were located in a high-density area, 32.2% of the livestock in British Columbia and 24.2% of the livestock in Ontario.
- The most prevalent type of livestock in high-density areas varied by province: beef cattle in Alberta; dairy cattle and hogs in Quebec; and dairy cattle in Ontario.
- The percentage of cattle, both beef and dairy, as well as hogs, in high-density areas has increased during the past decade.
- In 2001, seven regions in Canada stood out as areas with large numbers and high concentrations of livestock: Lethbridge County in Alberta; the counties of Huron, Perth, Wellington, Oxford, and the Waterloo Regional Municipality in Ontario; and the Fraser Valley Regional District in British Columbia. Densities have also increased during the past 10 years in all six areas.
- Livestock concentration is not necessarily due solely to larger livestock populations. Some high-density areas appear to be the result of limited numbers of livestock located on a small farmland base.
- Livestock concentrations are declining in some high-density areas. Of the 30 regions in Canada with the highest livestock densities, 18 were in Quebec. Ten of those in Quebec reported declines in livestock densities over the past 10 years.

This working paper is now available on Statistics Canada's Web site (www.statcan.ca). In the **Search the site** box, type the catalogue number [21-601-MIE2003062](#).
