## Private radio broadcasting, 2004

The statistics presented in this Bulletin are for the fiscal year ending August 31 and cover the period from 2001 to 2004. The text below includes references to earlier periods when it is useful to put the recent performance of the industry in an historical context.

## Slower growth of air time sales in 2004

The air time sales of commercial radio broadcasters increased 3.3\% in 2004, less than half the pace of the previous year. With that increase, private radio's advertising revenue surpassed the $\$ 1.2$ billion mark.

The slower growth of advertising revenue in 2004 was not unique to radio. The overall advertising market grew 5.4\% in 2004 compared to $6.0 \%$ in 2003. All media except Daily newspapers and out-of-home advertising had more modest growth in 2004 than in the previous year. ${ }^{1}$

The radio industry did however suffer the most significant year-over-year drop in performance. Its advertising revenue grew at a slower pace than the overall advertising market for the first time since 1999-2000.

Is the radio industry a victim of its economic success of the recent past?
The oldest electronic media has done relatively well in the recent past in terms of market penetration and profitability. To the credit of the industry, it has done so in a period when Canadians are spending less time on average listening to radio with every year that goes by.
The radio industry's share of the advertising market has grown from $9.7 \%$ in 1997 to $10.4 \%$ in 2003 before edging down to $10.2 \%$ in 2004. The profit margin of the industry has also been on the rise during that period, jumping from $10.1 \%$ in 1997 to $18.8 \%$ in 2003 before declining to $17.9 \%$ in 2004.

Much of the recent economic success of the industry can be attributed to its re-organization and consolidation. Changes in regulations in 1998 allowed for increased consolidation of ownership within individual markets. This change opened the door to economies of scale and was meant to allow the radio industry to compete more effectively with other forms of media. The industry also rationalized its operations through closures and transfers of AM stations to the more popular and profitable FM format. The integration of new technologies also played a role in the strengthening of the industry.
A strong and competitive industry tends to attract new players. And the radio industry did just that. From 1997 to 2004, the number of commercial stations and networks leaped from 482 to 558. The 20 net additions of stations in 2004 represent the largest jump of that period.

While the entry of new players is a sign of a healthy industry and adds diversity of choice for listeners, it can also create downward pressures on prices. This phenomenon likely explains, at least in part, the slower than average growth in advertising revenues for radio in 2004.

## More concentration of ownership

Although the number of stations is on the rise, the number of firms operating these stations has remained relatively stable since the change in ownership rules. The industry comprised 147 firms in 1999, the year following the changes to regulations. Five years later, the number of firms in the industry stood at 144. However an increasing number of stations are operated by the largest firms of the industry, and these firms account for a growing share of the industry's revenue.

In 1999, the top 5 firms operated $20.5 \%$ of the stations and generated $43.6 \%$ of the industry's revenue. The top 10 firms operated $31.7 \%$ of the stations and accounted for $62.0 \%$ of commercial radio's revenue.

Five years later, the situation had changed dramatically. The top 5 firms controlled $37.3 \%$ of the stations and cornered $65.1 \%$ of the industry's revenue. The top 10 firms had 58.0\% of the stations and $78.7 \%$ of commercial radio's revenues.

## FM radio - The locomotive that pulls the industry

Better sound quality and more attractive programming have gradually lured listeners to FM radio at the expense of AM radio. In the fall of 2004, 75\% of radio listening time went to FM stations. ${ }^{2}$

FM stations continued to account for most of the growth in air time sales by the industry in 2004. The 4.9\% increase - though less than half the growth achieved in 2003 and well below the average for the previous 10 years -offset the $1.3 \%$ decline of air time sales by AM stations.
FM stations also accounted for close to $98 \%$ of the $\$ 223.1$ million of profits before interest and taxes generated by the industry in 2004. The robust $23.1 \%$ profit margin (before interest and taxes) realized in 2004 was consistent with the returns achieved in the previous 5 years, albeit slightly lower.

## The rationalization of AM radio continued in 2004

Back in 1991, the 327 commercial AM stations on air accounted for about half of the radio listening time. That share has been on a downward trend ever since and represented less than one quarter of total listening time in 2004.

This fundamental shift in listening habits forced the industry to significantly downsize the AM segment, mostly by transfer of stations to the FM band. This began in the early 1990s and continued in recent years. There were 189 AM stations and networks at August 31 2004, down from 240 only five years before.

[^1]The financial results of AM radio for the last 10 years reflect the dwindling of audience and decline in the number of stations. In the 10 year period from 1994 to 2004, air time sales declined every year except 1997, 1998 and 2003. And for most of that period, revenue per AM station was below the historical high of $\$ 1.45$ million attained in 1989.

There are signs however that the radio industry is beginning to reap the benefits of the rationalization of AM radio. Revenue per station surpassed the previous historical high (\$1.45 million in 1989) in 2003 and continued climbing in 2004 to reach $\$ 1.6$ million. In 2003 and 2004, AM stations realized a modest profit before interest and taxes (1.6\% and 1.8\% of revenues) after having incurred losses every year since 1990. Perhaps the most telling sign of a turnaround is the fact that the proportion of profitable stations climbed above $60 \%$ in those two years.

## The radio industry performed best in large markets

Radio broadcasters in larger markets continued to outperform those in smaller markets. The sale of air time by stations in the top 5 Census Metropolitan Areas (CMAs) advanced 4.4\% to $\$ 577.8$ million while those of stations in other CMAs grew at a slower 3.6 \% pace to $\$ 318.8$ million. The air time sales of stations broadcasting outside CMAs reached \$317.4 million, up a modest 1.1\% compared to 2003. These results are in sharp contrast with those of 2003 when air time sales grew at rates exceedind $8.0 \%$ in large, medium and small markets alike. ${ }^{3}$
Radio stations in larger markets were also more profitable. Their profit margin before interest and taxes was $21.9 \%$ in 2004, compared to $14.9 \%$ for stations in medium-sized markets and $13.4 \%$ for those in small-sized markets.

## Calgary remained the most profitable large market

As a group, Calgary radio stations realized 26.6 cents of profits before interest and taxes for every dollar of revenues generated in 2004. Calgary has been the most profitable large radio market since 1998 when it took over first place from Vancouver. Calgary was also the most buoyant large market in 2004 with a $7.1 \%$ increase in sales of air time.
The market dynamics varied considerably from one large metropolitan area to next. The Toronto market for instance was the only one to register stronger growth in air time sales in 2004 ( $+5.8 \%$ ) than in 2003 (+2.8\%). Toronto stations also improved their profit margin from $24.2 \%$ in 2003 to $25.3 \%$ in 2004 moving from third to second place ahead of Ottawa-Gatineau stations on the list of most profitable large radio markets.

The Montréal market meanwhile was sluggish in 2004 (+0.3\%) after rebounding in 2003 with an increase of $15.6 \%$ in air time sales, the fastest of the top five markets. The declining popularity of AM radio in the francophone market largely explains the situation. The air time sales of AM radio in the Montréal area dropped 8.5\% in 2004. According to a recent study, French-language AM stations (in all markets) accounted for only $9 \%$ of all AM station listening in the fall of $2004 .{ }^{4}$

## Ethnic and native radio - The fastest growing segment of the industry in 2004

Ethnic and Native radio stations had the strongest growth of air time sales in 2004 (+5.2\%) followed by English (+4.0\%) and French language stations ( $-0.1 \%$ ).
The Ethnic and Native radio stations segment was also the only one to improve its profit margin. From $6.9 \%$ of revenues in 2003, the profit before interest and taxes of this segment

[^2]jumped to $10.6 \%$ of revenues in 2004, a result comparable to the $11.0 \%$ margin by the French language segment. The profitability of Ethnic and Native radio however remained well below that of its English language counterpart (19.6\%).

## Financial performance uneven across the country

The performance of radio broadcasters varied considerably from one region to the next in 2004. Airtime sales grew at a rate above the 3.3\% national average in Ontario, Saskatchewan and Alberta and at a rate below the national average in the other Provinces. Growth was the weakest in Québec ( $-0.3 \%$ ) and Atlantic Canada ( $0.0 \%$ ) and strongest in Saskatchewan (+6.5\%) and Alberta (6.1\%).

Profit margins before interest and taxes ranged from a high of $24.8 \%$ in Atlantic Canada to a low of $5.8 \%$ in Manitoba. The profit margin decreased in 2004 in all regions except Saskatchewan where it slightly improved.

## Employment up for the second consecutive year

The industry had a weekly average of 9,201 employees in 2004, up from 9,073 in 2003. The increase was due mostly to the net addition of 20 stations to the industry. Air time sales per employee stood at $\$ 131,945$ in 2004, a modest $1.9 \%$ improvement over the 2003 level. For each dollar of air time sales, the industry paid $\$ 0.44$ in salaries and benefits, $1.6 \%$ more than in the previous year.

## A resilient industry

Some predicted the disappearance of radio when television came on air. More than fifty years later, radio is alive and well. In fact, radio has returned better profit margins (before interest and taxes) than television every year since 1998 despite the stellar performance of pay and specialty television during that period. ${ }^{5}$ The Internet, with its many radio-like services,
and music downloading are also seen as threats to conventional radio. The imminent launch of satellite radio will add another player in a seemingly crowded space.
There is little doubt that new technologies and the choices they present are having a profound impact on conventional radio. One only needs to look at listening trends to be convinced. From the fall of 1999 to the fall of 2004, the average time spent by Canadians listening to radio declined $5 \%$ from 20.5 to 19.5 hours a week. The $25 \%$ drop in listening by teenagers during the same period is perhaps the most telling sign of changes to come.

But adapting to change is nothing new for this industry. After all, radio has been around longer than any other electronic media. And while new technologies appear to endanger radio, new technologies are also one of its weapons in the fight for survival. Although difficult to measure, the adoption of new technologies has undoubtedly led to efficiencies that contributed to cost containment and increased profitability. And new technologies are not only affecting the industry's business model on the input side of the equation. The Internet is also becoming a tool to reach audience and generate revenues. Roughly 4 out of 10 conventional radio stations broadcasted on the Internet in 2004. And close to $30 \%$ of those that did generated revenues from their Internet broadcasting activity.

## Industry coverage

The statistics presented in this Bulletin are for the private sector component of the following industry of the 2002 North American Industrial Classification System (NAICS): Radio Broadcasting (51511)

## Surveys

The annual survey on which this publication is based is sent to all organisations licensed by the Canadian Radio-television and Telecommunications Commission (CRTC) to operate conventional radio or television programming

[^3]undertakings. The survey of conventional broadcasters is conducted jointly by Statistics Canada and the CRTC.

## Data quality

The data presented in this Bulletin are of good quality and can therefore be used with confidence. This assessment is based on available data accuracy measures and the judgment of the analysts involved in this survey. These statistics are, however, subject to revision. Revisions are usually the result of late receipt of information, of re-filing by respondents of previously submitted data, or of detection of errors after publication of data. They typically do not have a material impact on the preliminary results. Past revisions generally accounted for less than $1 \%$ of the value for key variables such as total revenues, salaries and wages and number of employees. Users interested in learning more about the concepts, methodology and data quality of the broadcasting surveys can visit Statistics Canada's web site at: www.statcan.ca/english/concepts/index.htm. This statement is also available on request (see contact information below).

## For more information

In addition to the information provided in this publication, special tables and analytical services are available on a cost recovery basis from the Telecommunications Section; Science, Innovation and Electronic Information Division. Access to selected information on the broadcasting industries is also available through CANSIM, Statistics Canada's data base and retrieval system (table 3570001). For further information, contact Advisory Services Division at 1800263 1136, fax 1877 287-4369, infostats@statcan.ca.

## Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1800263 1136. The service standards are also published on www.statcan.ca under About Statistics Canada > Providing services to Canadians.

## Symbols

The following standard symbols are used in Statistics Canada publications:
not available for any reference period
.. not available for a specific reference period
... not applicable
0 true zero or a value rounded to zero
$0^{\text {s }} \quad$ value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
$p$ preliminary
r revised figures
$x \quad$ supressed to meet the confidentiality requirements of the Statistics Act
E use with caution
F too unreliable to be published
