Ordering and subscription information

This product, catalogue no. 62-011-XIE, is published monthly in electronic format at a price of CAN\$19.00 per issue and CAN\$175.00 for a one-year subscription. To obtain a single issue or to subscribe, visit our website at www.statcan.ca, and select Our Products and Services.

This product is also available as a standard printed publication at a price of CAN\$24.00 per issue and CAN\$233.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CAN\$6.00	CAN\$72.00
Other countries	CAN\$10.00	CAN\$120.00

All prices exclude sales taxes.

The printed version of this publication can be ordered

- by phone (Canada and United States) 1 800 267-6677
- by fax (Canada and United States) 1 877 287-4369
- by e-mail infostats@statcan.ca
- by mail

When notifying us of a change in your address, please provide both old and new addresses.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1 800 263-1136. The service standards are also published on www.statcan.ca under About Statistics Canada > Providing services to Canadians.

Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- ^p preliminary
- ^r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- ^E use with caution
- F too unreliable to be published

Note on Cansim

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

® Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Fred Barzyk**, Chief, Producer Prices Section

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences – Permanence of Paper for Printed Library Materials, ANSI Z39.48 – 1984.

Highlights

Monthly prices for manufactured goods at the factory gate were down in December, as prices for petroleum products declined for a third month. Raw materials prices were down for a fourth consecutive month in December, as prices for crude oil continued to fall.

Prices for manufactured goods increase

Prices charged by manufacturers, as measured by the Industrial Product Price Index (IPPI), were down 0.3% from November to December. Lower prices for petroleum products, motor vehicles and chemical products were the major contributors to this monthly decrease.

The 12-month change in the IPPI was 2.5%, down from November's year-over-year increase of 2.9% and largely due to higher prices for petroleum products as well as chemical products compared to one year earlier.

The Raw Materials Price Index (RMPI) was down 1.2% from November to December, following a 1.5% decrease the previous month. There were price decreases in mineral fuels as well as ferrous materials.

Compared to December 2004, raw materials cost factories 16.8% more, up from the 12-month change of 12.7% in November.

In December, the IPPI (1997=100) stood at 111.0 down from November's level of 111.3. The RMPI (1997=100) stood at 146.9, down from a revised level of 148.7 in November.

IPPI: Prices for petroleum products, motor vehicles and chemical products decline

On a month-over-month basis, manufacturers' prices were down 0.3%, mainly due to lower prices for petroleum products, motor vehicles and chemical products.

Petroleum and coal products prices decreased 2.1% compared to November. If petroleum and coal product prices had been excluded, the IPPI would have edged down 0.1% rather than decreasing 0.3%.

Motor vehicles and other transport equipment declined 1.2% as the Canadian dollar remained strong. Prices for chemical products fell 1.3%

from the previous month as lower prices were observed for synthetic resins.

Prices for electrical and communication products, pulp and paper products as well as machinery and equipment also declined from the previous month.

However, primary metal products rose 3.0% as prices for aluminum, nickel and copper products increased due to strong demand and rising production costs.

Prices for fruit, vegetable and feed products, meat, fish and dairy products as well as metal fabricated products also increased in December.

IPPI: Petroleum and chemical products are the major factors in the 12-month change

On a 12-month basis, the IPPI was up 2.5% in December, following an increase of 2.9% in November.

Prices for petroleum and coal products rose 25.1% from December 2004, up from November's increase of 18.5%. If petroleum and coal product prices had been excluded, the IPPI would have increased 0.6%, rather than increasing 2.5% from the same period a year earlier.

Chemical products increased 7.8%, due to higher prices for industrial type chemicals. Prices were also higher for rubber, leather and plastic fabricated products, primary metals, fruit, vegetable and feed products, tobacco products, non-metallic minerals as well as furniture and fixtures, compared with the same period a year earlier.

On the other hand, motor vehicles and other transport equipment prices and electrical and communication products were down 3.5% and 0.6% respectively from a year ago, mostly as a result of a stronger Canadian dollar.

Lumber and other wood products declined 4.9% from December 2004 to December 2005, as year-over-year price decreases were recorded for softwood lumber, softwood plywood excluding Douglas fir and particleboard. Prices for pulp and paper products were also down from a year ago.

RMPI: Crude oil prices continue to decrease

On a monthly basis, raw materials prices fell 1.2% in December, following a decrease of 1.5% in November. Mineral fuels were down 4.1% compared to November. Crude oil prices decreased 4.5% as inventories remained high.

Ferrous materials decreased 0.8% from the previous month as prices were down for iron ore and iron and steel scrap.

However, prices for non-ferrous metals rose 5.5% mainly due to higher prices for zinc concentrates, radio-active concentrates, lead concentrates, copper concentrates and gold. Prices for animal and animal products rose 1.4% compared to the previous month, as increases were registered for cattle for slaughter and unprocessed whole milk. Prices for wood products increased 0.8% with higher prices for softwood logs and bolts being reported.

On a 12-month basis, the price of raw materials rose 16.8% in December, up from the 12.7% year-over-year increase in November. Mineral fuels were up 27.2% with crude oil prices rising 32.7%. If mineral fuels had been excluded, the RMPI would have increased 7.3% instead of rising 16.8%.

Prices for non-ferrous metals rose 28.1%, mainly because of higher prices for radio-active concentrates, zinc concentrates, copper concentrates and lead. Prices for animal and animal products were up

3.3% from a year ago, due to year-over-year increases for cattle for slaughter (+17.5%) and unprocessed whole milk (+6.1%). However, compared to December 2004, prices were down for hogs for slaughter (-15.3%) and poultry (-8.8%).

Raw materials prices are up

There were higher prices for non-metallic mineral products, ferrous materials and vegetable products, while wood products (-6.8%) and softwood logs and bolts prices (-9.1%) were both down compared with the same month a year earlier.

Impact of the exchange rate

Between November and December, the value of the Canadian dollar against the US dollar was up 1.7%. As a result, the total IPPI excluding the effect of the exchange rate would have risen 0.2% instead of its actual decrease of 0.3%.

On a 12-month basis, the value of the Canadian dollar rose 5.0% against the US dollar. If the impact of the exchange rate had been excluded, producer prices would have risen 3.8% between December 2004 and December 2005, rather than their actual increase of 2.5%.

Prices for intermediate goods decrease

Prices for intermediate goods decreased 0.3% from November. Lower prices for petroleum products, chemical products, motor vehicles, electrical and communication products, and pulp and paper products were the major contributors to the decrease.

Higher prices for primary metals and fruit, vegetable and feed products partially offset the monthly decrease.

Producers of intermediate goods received 3.4% more for their goods in December 2005 than in December 2004. Higher prices were registered for petroleum products, chemical products, rubber, leather and plastic fabricated products, primary metals, non-metallic mineral products, fruit, vegetable and feed products, and machinery and equipment.

These increases were partly offset by lower prices for lumber products, motor vehicles, electrical and communication products, and meat, fish and dairy products.

Finished goods prices decline

On a monthly basis, prices for finished goods were down 0.4% from November. Lower prices for motor vehicles, machinery and equipment, electrical and communication products as well as chemical products were the major contributors to this monthly decline.

These decreases were partially offset by higher prices for petroleum products and meat, fish and dairy products.

Compared with December 2004, prices for finished goods were up by 0.9%. Higher prices for petroleum products, tobacco products, fruit, vegetable and feed products, meat, fish and dairy products, chemical products, rubber, leather and plastic fabricated products, and furniture and fixtures were the major contributors to the annual increase.

Lower prices for motor vehicles, lumber products, and pulp and paper products partly offset the annual increase.

2005 in Review

For 2005, manufacturers received an average of 1.5% more for their products than in 2004, much lower than the 3.1% increase in 2004.

The main contributors to this increase were petroleum and coal products (+23.5%), primary metal products (+2.7%), metal fabricated products (+3.8%), chemical products (+6.2%) and rubber, leather and plastic fabricated products (+5.6%).

Motor vehicles and other transport equipment prices were down 4.6% on average in 2005. This decrease was mainly the result of a stronger Canadian dollar.

Lumber and other wood products also declined 8.4% in 2005 compared to 2004 as prices were lower on average for softwood lumber, particleboard and softwood type plywood.

The value of the Canadian dollar in terms of the US dollar strengthened on average in 2005, rising 7.4%. If the impact of the exchange rate had been excluded, the annual IPPI would have risen 3.4% rather than the actual 1.5% increase.

Raw materials prices were up an average of 12.9% in 2005 compared to the 11.8% increase in 2004. Most of the upward pressure came from higher prices for mineral fuels with crude oil prices rising 31.2% on average in 2005. Other major contributors to the annual average increase were non-ferrous metals and non-metallic minerals which rose 14.2% and 9.3% respectively.

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

- The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
 - ss indicates the S-level commodity code (from 9 to 28)
 - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
 - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
 - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
 - rr indicates a split of a PCGA.

Table 3
Industrial Product Price Indexes, by Industry and Industry Groups (1997=100)

		Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average

Note: Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
2. The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address infounit@statcan.ca.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address infounit@statcan.ca.
