Highlights

Industrial product and raw materials price indexes

Manufacturers' prices were up 1.3% in July but down 1.6% on an annual basis, largely due to the effect of the Canadian dollar against the US dollar. If the impact of the Canadian dollar is removed, the Industrial Product Price Index (IPPI) would have risen 1.0% rather than falling 1.6% from the previous year.

Petroleum product prices have less influence on the IPPI

12-month % change

From a monthly perspective, higher prices for motor vehicles and other transport equipment (+2.9%), lumber and other wood products (+3.6%) and primary metal products (+2.3%) were the major contributors to the increase in the IPPI. Prices for petroleum products also rose (+1.6%), as well as those for electrical and communication products (+1.7%). However, prices for meat, fish and dairy products were down 2.4% from June. Lower prices for beef products were responsible for this decrease, the result of the impact of last May's detection of a single case of bovine spongiform encephalopathy (BSE), or mad cow disease.

On an annual basis, lower prices for motor vehicles and other transport equipment (-6.2%), lumber and other wood products (-4.3%) and electrical and communication products (-4.0%) were the major contributors to the year-over-year decline in the IPPI.

The petroleum and coal products group continues to have a smaller influence on the year-over-year change in the IPPI than it did for the first four months of 2003, with an increase of 3.3%. If petroleum and coal product prices had been

excluded, the IPPI would have declined 2.0% instead of decreasing 1.6% on a year-over-year basis.

In addition to petroleum and coal products, prices for chemical products (+3.2%) as well as tobacco products (+19.6%) were also up compared with the previous year.

Lower cattle and calves prices push down raw materials prices

On a monthly basis, raw materials prices were down 1.5% from June. Animals and animal products were the major contributors to the monthly decrease in the Raw Materials Price Index (RMPI), with prices decreasing 10.1%. Prices for cattle and calves for slaughter declined 43.8% from June, reflecting the effect of the discovery last May of a single case of BSE, or mad cow disease, in Alberta. Lower prices for vegetable products as well as wood products also contributed to the decline. Mineral fuels increased slightly by 0.1% as crude oil prices remained unchanged from June. Higher prices for non-ferrous metals and ferrous materials partly offset the monthly decrease.

Manufacturers paid 2.4% less for their raw materials than they did in July last year, compared with an increase of 0.8% in June. Lower prices for animals and animal products (-14.2%) were mainly responsible for this annual drop in the RMPI. Prices for vegetable products, wood products and non-ferrous metals were also down on an annual basis. These decreases were partly offset by higher prices for mineral fuels (+5.6%) and non-metallic minerals (+5.8%). If mineral fuels had been excluded, the RMPI would have decreased 8.6%.

The IPPI (1997=100) stood at 105.3 in July, up from its revised level of 104.0 in June. The RMPI (1997=100) was 110.0 in July down from its revised level of 111.7 in June.

Crude oil prices still influence the RMPI

12-month % change

Impact of exchange rate

Between June and July, the value of the US dollar strengthened against the Canadian dollar, pushing up prices of commodities that are quoted in US dollars, notably motor vehicles and lumber products. As a result, the total IPPI excluding the effect of the exchange rate would have edged up 0.1% instead of increasing 1.3%.

However, on a 12-month basis, the Canadian dollar is much stronger. Consequently, the IPPI excluding the effect of the exchange rate would have increased 1.0% rather than declining 1.6% from July 2002 to July 2003.

Prices for intermediate goods decrease on an annual basis

Prices for intermediate goods rose 1.1% from June. Higher prices for lumber products, motor vehicles, pulp and paper products, primary metal products as well as chemical products were the major contributors to the increase.

Producers of intermediate goods received 1.3% less for their goods in July compared with the same month last year. Lower prices for motor vehicles, lumber products, pulp and paper products, primary metal products as well as electrical and communication products were partially offset by higher prices for petroleum and chemical products.

"Intermediate goods," sometimes referred to as "input goods," are goods that are generally bought by manufacturers to be further used in the production process, that is, to make other goods.

Finished goods continue to decrease from a year ago

On a monthly basis, prices for finished goods were up 1.5% from June. Higher prices for motor vehicles, petroleum products, electrical and communication products as well as machinery and equipment were the major contributors to this increase.

Declining prices for motor vehicles, electrical and communication products, machinery and equipment as well as pulp and paper products pushed year-over-year prices down 2.1% from July 2002. These decreases were partly offset by higher prices for tobacco products, fruit, vegetable and feed products, chemical products as well as petroleum products.

"Finished goods" are those generally purchased for the purpose of either consumption or investment. Most of the foods and feeds category ends up in the hands of consumers. Most capital goods are equipment and machinery generally bought by companies, government agencies, or governments. Much of the remainder is bought by consumers.

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

- 1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
- ss indicates the S-level commodity code (from 9 to 28)
 - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
 - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
 - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
 - rr indicates a split of a PCGA.

- 1) The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
- 2) The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.
