Highlights

Raw materials prices declined sharply in June due to lower prices for non-ferrous metals and crude oil. Prices for manufactured goods at the factory gate were down in June following three months of increases.

Prices charged by manufacturers, as measured by the Industrial Product Price Index (IPPI), were down 0.4% from May to June. Lower prices for primary metal products and lumber products were the major contributors to this monthly decrease.

Prices for manufactured goods decrease

The 12-month change in the IPPI was up 2.2%, down slightly from May's year-over-year increase of 2.5%. Upward pressure came mainly from higher prices for petroleum products and primary metal products.

Following a 5.8% increase in May, the Raw Materials Price Index (RMPI) was down 2.5% from May to June, due primarily to lower prices for non-ferrous metals and crude oil.

Compared to June of last year, raw materials cost factories 14.7% more, down significantly from the year-over-year change of 23.6% in May.

The IPPI (1997=100) stood at 113.7 in June, down from 114.2 in May. The RMPI (1997=100) reached 166.2, down from a revised level of 170.4 in May.

IPPI: Prices for primary metals and lumber products decline

On a month-over-month basis, manufacturers' prices were down 0.4%, mainly due to lower prices for primary metal products as well as lumber products.

Prices for primary metal products declined 5.3% compared to May, a sharp contrast to the 6.9% and 6.7% increases recorded in May and April. Lower prices were observed for primary copper products (-14.0%), primary aluminum products (-7.8%), primary nickel products (-6.5%), refined zinc products (-11.4%), silver products (-19.5%) as well as refined gold products (-14.1%).

Lumber and other wood products were down 1.5% from May to June, mainly due to a decline in demand as well as a slowdown in construction. Prices for fruit, vegetable and feed products also declined in June.

However, petroleum and coal products prices increased by only 0.6% compared to May, a slight drop from the 0.9% increase a month earlier. If petroleum and coal product prices had been excluded, the IPPI would have decreased 0.6% rather than 0.4%.

Prices for pulp and paper products, metal fabricated products, meat, fish and dairy products as well as rubber, leather and plastic fabricated products also increased in June.

IPPI: Petroleum and primary metal products remain the major contributors to the 12-month change

On a 12-month basis, the IPPI was up 2.2% in June, a slight decrease from the year-over-year change of 2.5% in May.

Prices for petroleum and coal products rose 20.1% from June 2005, down from May's increase of 25.4%. If petroleum and coal product prices had been excluded, the IPPI would have increased 0.3%, rather than 2.2% from a year ago.

Prices for primary metal products were up 15.5% compared to a year ago. Higher prices on a year-over-year basis were observed for copper products (+75.8%), refined zinc products (+115.1%), aluminum products (+19.7%), silver products (+26.3%) and gold products (+21.6%).

Prices were also higher than one year ago for rubber, leather and plastic fabricated products, chemical products, non-metallic mineral products, tobacco products, metal fabricated products and furniture and fixtures.

On the other hand, motor vehicles and other transport equipment prices were down 7.0% from a year ago, mainly as a result of a stronger Canadian dollar.

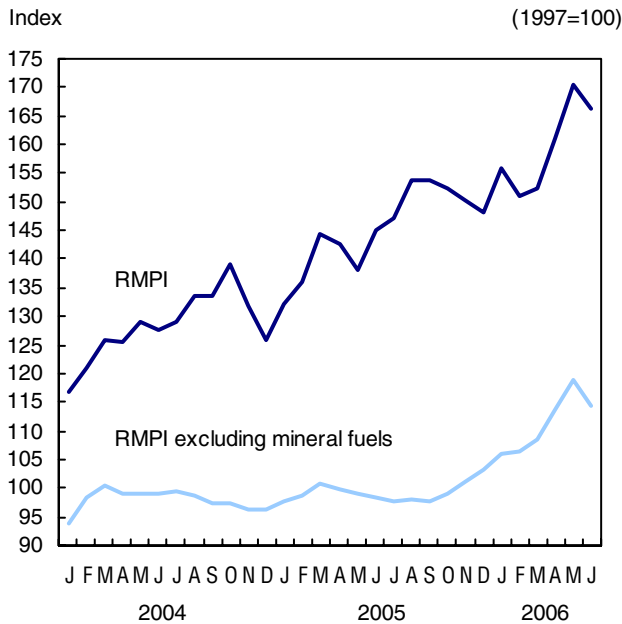

Lumber and other wood products declined 5.4% from June 2005 to June 2006, as year-over-year decreases were recorded for softwood lumber (-8.4%), particleboard (-12.9%) and pulpwood chips (-3.9%).

Prices for electrical and communication products as well as machinery and equipment were also down from a year ago.

RMPI: Non-ferrous metals and crude oil push down raw materials prices

On a monthly basis, raw materials prices fell 2.5% in June, following increases of 5.8% in May and 5.7% in April.

Raw materials prices decline

Non-ferrous metals prices declined 10.9%, a significant drop from the increases of 15.6% in April and 11.3% in May. Lower demand pushed down prices for zinc (-11.3%), copper (-14.0%), lead (-20.8%), gold (-14.1%) and silver (-19.5%).

Mineral fuels decreased 1.2% compared to May. Prices for crude oil were down by 1.3%, mainly due to higher inventories and ample supply. If mineral fuels had been excluded, the RMPI would have decreased 3.8% instead of 2.5%.

Prices for wood products and non-metallic minerals also contributed to the monthly decrease but to a much lesser degree.

On the other hand, prices for animal and animal products, ferrous materials and vegetable products increased from May to June.

On a 12-month basis, the price of raw materials rose 14.7% in June, a significant drop from the 23.6% year-over-year increase in May.

Mineral fuels were up 13.5% with crude oil prices rising 14.5%. If mineral fuels had been excluded, the RMPI would have increased 16.1% instead of rising 14.7%.

Prices for non-ferrous metals rose 54.7%, mainly because of higher prices for zinc, copper, radio-active concentrates, gold and silver. Prices for ferrous materials, animal and animal products, non-metallic minerals and vegetable products were also up from a year ago.

Impact of the exchange rate

Between May and June, the value of the Canadian dollar against the US dollar was down 0.4%. As a result, the total IPPI excluding the effect of the exchange would have fallen 0.5% instead of its actual decrease of 0.4%.

On a 12-month basis, the value of the Canadian dollar rose 11.4% against the US dollar. If the impact of the exchange rate had been excluded, producer prices would have risen 5.0% between June 2005 and June 2006, rather than their actual increase of 2.2%.

Prices for intermediate goods are down

Prices for intermediate goods decreased 0.8% from May. Lower prices for primary metal products, lumber products, fruit, vegetable and feed products as well as chemical products were the major contributors to this monthly drop.

These decreases were partly offset by higher prices for pulp and paper products, petroleum products, meat, fish and dairy products, metal fabricated products and rubber, leather and plastic fabricated products.

Producers of intermediate goods received 4.2% more for their goods in June 2006 than in June 2005. Higher prices were registered for petroleum products, primary metal products, rubber, leather and plastic fabricated products, non-metallic mineral products, chemical products and metal fabricated products.

These increases were partly offset by lower prices for lumber products, motor vehicles, pulp and paper products, fruit, vegetable and feed products and electrical and communication products.

Finished goods prices unchanged in June

On a monthly basis, prices for finished goods were unchanged from May. Higher prices for motor vehicles, electrical and communication products and machinery and equipment were offset by lower prices for lumber products, pulp and paper products, non-metallic mineral products as well as chemical products.

Compared with June 2005, prices for finished goods decreased 1.0%. Lower prices for motor vehicles, electrical and communication products, machinery and equipment and lumber products were partially offset by higher prices for petroleum products, tobacco products, fruit, vegetable and feed products, meat, fish and dairy products, furniture and fixtures and rubber, leather and plastic fabricated products.

Note to readers

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

- The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
 - ss indicates the S-level commodity code (from 9 to 28)
 - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
 - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
 - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
 - rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
2. The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.
