## Information to access the product

This product, catalogue no. 62-011-XIE, is available for free in electronic format. To obtain a single issue, visit our website at [www.statcan.ca](http://www.statcan.ca) and select Publications.

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on [www.statcan.ca](http://www.statcan.ca) under About us > Providing services to Canadians.

## Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- <sup>P</sup> preliminary
- <sup>r</sup> revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- <sup>E</sup> use with caution
- F too unreliable to be published

## Note on Cansim

CANSIM<sup>®</sup> (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

<sup>®</sup> Registered Trade Mark of Statistics Canada.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Sandrine Prasil**, Chief, Goods and Construction Prices Section

## Highlights

Prices for manufactured goods at the factory gate declined in September for the second month in a row, mainly due to lower prices for petroleum products. Raw materials prices also decreased in September, as prices for crude oil continued to fall.

### Prices for manufactured goods decrease again

Prices charged by manufacturers, as measured by the Industrial Product Price Index (IPPI), were down 1.6% in September, following a 0.5% drop in August. Lower prices for petroleum products were the major contributors to this monthly decrease.

The 12-month change in the IPPI was up 1.3%, a lower rate of growth compared to the year-over-year increase of 3.6% in August. Upward pressure came mainly from higher prices for primary metal products.

The Raw Materials Price Index (RMPI) was down 5.2% from August to September, following a 3.7% decline the previous month. The decrease was due primarily to lower prices for crude oil.

Compared to September 2005, raw materials cost factories 4.0% more, down significantly from the year-over-year change of 9.6% in August.

The IPPI stood at 113.4 (1997=100) in September, down from 115.2 in August. The RMPI reached 160.0 (1997=100), down from a revised level of 168.7 in August.

### IPPI: Lower prices for petroleum products

On a month-over-month basis, manufacturers' prices were down 1.6%, mainly due to lower prices for petroleum products.

Petroleum and coal products prices decreased by 13.8%, as the cost for crude oil declined for a second month. This was the largest monthly decline since the 13.6% drop in April 2003. If petroleum and coal product prices had been excluded, the IPPI would have remained unchanged rather than falling 1.6%.

Prices for primary metal products fell 1.0% compared to August, the third decline in four months. Prices for copper and copper alloy products were down by 6.4%, due to lower costs for input materials. Lower prices were also observed for silver, refined gold products as well as aluminum products.

On the other hand, prices for meat, fish and dairy products (+0.9%) as well as pulp and paper products (+0.3%) were higher compared to the previous month.

### Raw materials prices continue to decline

### IPPI: Primary metal products are the major contributors to the 12-month change

The IPPI was up 1.3% in September compared with the same month a year earlier, a significant change from the previous five months, where the year-over-year increases ranged between 2.2% and 4.5%. The slowdown in the increase was mainly due to the prices of petroleum products. Indeed, if petroleum and coal product prices had been excluded, the IPPI would have increased 2.9%.

Prices for primary metal products were up 28.5% compared to September 2005. Prices for nickel products (+86.0%), copper products (+77.0%), refined zinc products (+127.4%) and aluminum products (+14.9%) were all higher compared with one year earlier.

Prices were also higher than one year ago for pulp and paper products, rubber, leather and plastic fabricated products, metal fabricated products, meat, fish and dairy products, non-metallic mineral products and tobacco products.

However, prices for petroleum and coal products fell 11.3% from September 2005, the first year-over-year decrease since March 2004.

Motor vehicles and other transport equipment prices were down 3.5% from a year ago, due to the effect of a stronger Canadian dollar.

Lumber and other wood products declined 6.3% compared to September 2005, as year-over-year decreases were recorded for softwood lumber (-6.2%) and particleboard (-41.9%). Prices were also lower than a year ago for machinery and equipment.

### **RMPI: Crude oil prices push down the cost of raw materials**

Raw materials prices fell 5.2% in September, following a 3.7% decline in August. This was the largest monthly decrease since November 2004.

Mineral fuels were the major contributor to this monthly drop, with prices declining 9.9% compared to August. Prices for crude oil were down 11.6%, mainly due to higher inventories as well as softening demand. If mineral fuels had been excluded, the RMPI would have been unchanged from August instead of falling 5.2%.

Ferrous materials prices were down 3.6%, as prices for iron and steel scrap decreased 5.7%. Prices for vegetable products declined 1.6% from the previous month, as prices for natural rubber fell 18.4% due to increased production.

On the other hand, prices for wood and animal and animal products increased 1.0% and 0.4% respectively from August to September, while prices for non-metallic minerals remained unchanged.

On a 12-month basis, the price of raw materials rose 4.0% in September, down significantly from the 9.6% year-over-year increase in August, and the lowest rate of growth since March 2006, when prices had increased 5.5% from the previous year. If mineral fuels had been excluded, the RMPI would have increased 20.3% instead of rising 4.0%.

Non-ferrous metals were the major contributors to the 12-month increase, with prices rising 71.2%, mainly the result of year-over-year price increases for zinc, radio-active concentrates, copper, lead and nickel.

Prices were also higher than one year ago for wood, vegetable products as well as non-metallic minerals.

Mineral fuels were down 8.6%, with crude oil prices falling 9.5%. This was the first negative year-over-year change since March 2004. Prices for ferrous materials were also down from a year ago.

### **Impact of the exchange rate**

The value of the Canadian dollar against the US dollar was up 0.2% between August and September. As a result, the total IPPI excluding the effect of the exchange would have fallen 1.5% instead of its actual decrease of 1.6%.

On a 12-month basis, the value of the Canadian dollar rose 5.5% against the US dollar. If the impact of the exchange rate had been excluded, producer prices would have risen 2.8% between September 2005 and September 2006, rather than their actual increase of 1.3%.

### **Lower prices for intermediate goods**

Prices for intermediate goods decreased 1.5% from August. Lower prices for petroleum products, primary metal products as well as chemical products were the major contributors to this monthly drop.

These decreases were partly offset by higher prices for meat, fish and dairy products, pulp and paper products and fruit, vegetable and feed products.

Producers of intermediate goods received 4.0% more for their goods in September than in September 2005. Higher prices were registered for primary metal products, pulp and paper products, rubber, leather and plastic fabricated products, metal fabricated products, non-metallic mineral products, electrical and communication products and meat, fish and dairy products.

These increases were partly offset by lower prices for petroleum products, lumber products, motor vehicles and tobacco products.

### **Finished goods prices decrease**

Prices for finished goods were down 1.6% from August. Lower prices for petroleum products were partially offset by higher prices for lumber products, pulp and paper products, meat, fish and dairy products and chemical products.

Compared with September 2005, prices for finished goods declined by 2.6%. Lower prices were registered for petroleum products, motor vehicles, machinery and equipment and electrical and communication products.

These decreases were partly offset by higher prices for fruit, vegetable and feed products, meat, fish and dairy products, tobacco products, chemical products, furniture and fixtures, beverages, rubber, leather and plastic fabricated products as well as lumber products.

#### **Note to readers**

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

## Text Table I

Note: Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative and the All Manufacturing Industries is adjusted to match.

Note: Indexes for the most recent six months shown are subject to revision.

- The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
  - ss indicates the S-level commodity code (from 9 to 28)
  - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
  - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
  - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
  - rr indicates a split of a PCGA.

Note: Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
2. The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

## Explanation of methods used and additional sources for industrial price indexes

### Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

### Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

### Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

## Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

### Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

### Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## **Electric Power Selling Price Indexes, Non-residential, (1997=100)**

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.
