Information to access the product

This product, catalogue no. 62-011-XIE, is available for free in electronic format. To obtain a single issue, visit our website at www.statcan.ca and select Publications.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable, courteous, and fair manner. To this end, the Agency has developed standards of service that its employees observe in serving its clients. To obtain a copy of these service standards, please contact Statistics Canada toll free at 1-800-263-1136. The service standards are also published on www.statcan.ca under About us > Providing services to Canadians.

Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- ^P preliminary
- ^r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- ^E use with caution
- F too unreliable to be published

Note on Cansim

CANSIM[®] (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data, not included in this publication, are available from CANSIM.

For further information write to Marketing Division, Statistics Canada, Ottawa, K1A 0T6 or call (613) 951-8200.

[®] Registered Trade Mark of Statistics Canada.

Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

This publication was prepared under the direction of:

- **George Beelen**, Director, Prices Division
- **Sandrine Prasil**, Chief, Goods and Construction Prices Section

Highlights

Petroleum and metals pulled down the prices for manufactured goods and raw materials in January.

Prices charged by manufacturers, as measured by the Industrial Products Price Index (IPPI), fell 0.1% from December to January in conjunction with a drop in the prices for petroleum and coal products and primary metal products. However, rising prices for motor vehicles partially offset the monthly decline in the total index.

Prices for manufactured goods decrease

On a 12-month basis, the IPPI rose by 2.8%, comparable to the year-over-year average increase observed in November and December 2006. The upward pressure came largely from higher prices for primary metal products and pulp and paper products. The upward movement was slowed by a drop in the prices for petroleum and coal products and lumber and other wood products.

The Raw Materials Price Index (RMPI) declined 3.1% from December to January, which is equal to the average for declines in 2006. The decrease was due to lower costs for mineral fuels and non-ferrous metals.

Compared to January of last year, raw materials cost factories 2.8% more, down sharply from the 11.7% year-over-year increase recorded in December.

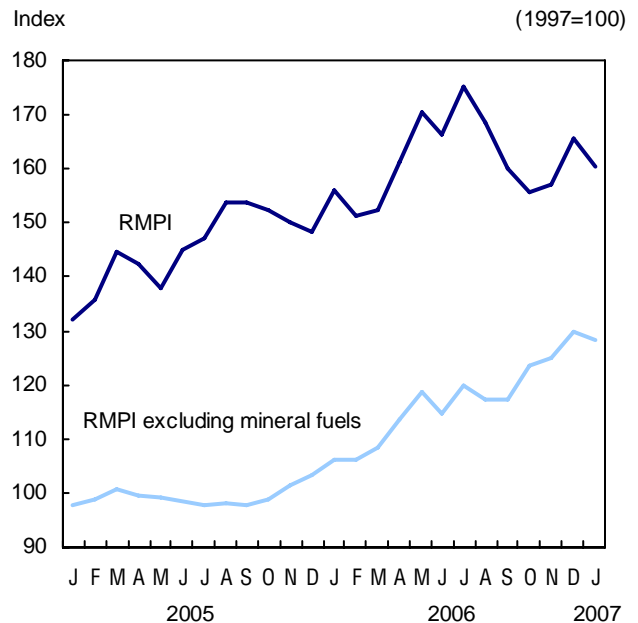

In January, the IPPI was 115.1 (1997=100), down from December's level of 115.2. The RMPI was 160.3 (1997=100), lower than December's revised level of 165.5.

IPPI: Price index pulled down by petroleum products and primary metals

On a month-over-month basis, manufacturers' prices were pulled down by lower prices for petroleum and coal products (-3.8%),

primary metal products (-1.5%) and, to a lesser extent, rubber, leather and plastic products (-0.8%). The main factor limiting the decline in the index was the rise in prices for motor vehicles (+1.3%).

Raw materials prices decline

The prices for petroleum and coal products fell 3.8% in January, following the 4.6% increase recorded in December, and as a result, they returned to an index level similar to the levels registered in October and November 2006. In January, the prices for petroleum and coal products were 20.1% below the peak reached in July 2006. If prices for petroleum and coal products had been excluded, the IPPI would have increased by 0.3% rather than declining 0.1%.

Prices for primary metal products dropped 1.5% in January after rising 3.8% in December. The index was pulled down by the steep drop in the prices for copper and copper alloy products (-10.2%), which continued the correction that began after the peak reached in July 2006. Other primary non-ferrous metal products also registered declines in January, notably refined zinc products (-9.8%). The decrease in the prices for primary metal products was partially offset by continued growth in the prices for aluminum products (+2.1%) and nickel products (+1.8%). The index level of nickel products reached a historic high, boosted by the scarcity of supply and strong demand from Asia.

In January, the drop in the IPPI was dampened by rising prices for motor vehicles (+1.3%) as a result of the depreciation of the Canadian dollar against the US dollar, which continued for a fourth consecutive month. Other products posting gains included lumber and other wood products (+1.4%), pulp and paper products (+0.6%) and electrical and communication products (+0.7%).

IPPI: Primary metals remain the most important factor in the 12-month change

The IPPI was up 2.8% from January 2006 to January 2007, a year-over-year increase comparable to the average for the last two months of 2006. The Industrial Product Price Index was boosted by rising prices for primary metals and to a lesser extent by higher prices for pulp and paper products, motor vehicles, as well as fruit, vegetables and feed products. Prices for petroleum and coal products as well as for lumber and other wood products dampened the growth of the index. The prices for IPPI products, excluding petroleum and coal, were up for an 11th consecutive month. If the prices for petroleum and coal had been excluded, the rise in the IPPI compared to January 2006 would have been 3.7% instead of 2.8%.

Prices for primary metals were up 22.2% over January 2006. Year-over-year price increases were observed for nickel products (+127.4%), refined zinc products (+91.1%), copper products (+23.3%) and aluminum products (+11.7%).

The annual rate of growth in the IPPI was mitigated largely by lower prices for petroleum and coal products (-5.9%), lumber and other wood products (-6.4%), chemical products (-0.9%), and rubber, leather and plastic products (-1.7%).

RMPI: Lower prices for crude oil and non-ferrous metals

Raw material prices fell 3.1% in January, after two consecutive months of increases.

Mineral fuels led the way with their prices falling 5.5%. Crude oil and natural gas prices each fell 5.6%, under the combined effect of excess supply and weak demand. If mineral fuels had been excluded, the RMPI would have declined 1.2% from December instead of falling 3.1%.

Prices for non-ferrous metals fell 5.4% after four consecutive monthly increases. Prices for zinc, copper and nickel concentrates accounted for much of the decline in the non-ferrous metals index.

Except for wood products, all other product groups advanced in January, notably animals and animal products (+1.9%) and vegetable products (+3.5%). Among vegetable products, prices for natural rubber and allied gums jumped 22.3%, pushed up by production costs. Grains and oilseeds continued their upward trend in conjunction with strong demand for organic fuels.

On a 12-month basis, raw material prices were up 2.8% in January, a rate of increase much lower than the December level of 11.7%. If mineral fuels had been excluded, the RMPI would have risen by 21.1% instead of 2.8%.

Non-ferrous metals accounted for most of the 12-month increase, with prices rising 55.6%, mainly on the strength of year-over-year increases in the prices of zinc, radio-active concentrates, copper and nickel.

Prices were also up over the previous year for wood (+13.0%), particularly for softwood logs and bolts, as well as for vegetable products (+17.1%), especially grains and oilseeds.

Prices for mineral fuels fell 13.2%, under the effect of a drop in crude oil prices (-10.8%) and natural gas (-25.1%), owing to the milder winter. This was the seventh negative year-over-year change in a row for natural gas, with reserves reaching record levels.

Impact of exchange rate

The value of the Canadian dollar against the US dollar declined 1.9% between December and January. As a result, the total IPPI excluding the effect of the exchange rate would have declined 0.6% instead of 0.1%.

On a 12-month basis, the value of the Canadian dollar fell 1.6% against the US dollar. If the impact of the exchange rate had been excluded, producer prices would have risen 2.3% between January 2006 and January 2007, rather than their actual increase of 2.8%.

Prices for intermediate goods decline

Prices for intermediate goods declined 0.2% from December to January. Falling prices for petroleum products, primary metal products, chemical products and rubber, leather and plastic products were partially offset by rising prices for lumber products, motor vehicles, pulp and paper products, electrical and communication products, fruit, vegetables and feed products, meat, fish and dairy products and non-metallic mineral products.

Producers of intermediate goods received 4.2% more for their products in January 2007 than in January 2006. Higher prices were observed for primary metal products, pulp and paper products, fruit, vegetables and feed products, electrical and communication products, motor vehicles, metal fabricated products, meat, fish and dairy products as well as non-metallic mineral products.

These increases were partially offset by the decrease in prices for lumber products, petroleum products, chemical products and rubber, leather and plastic products.

Prices for finished products up slightly

Prices for finished goods were up 0.2% from December to January. Higher prices for motor vehicles, electrical and communication products, machinery and equipment and lumber products were partially offset by lower prices for petroleum products and rubber, leather and plastic products.

Prices for finished goods were up 0.5% from January 2006. Price increases were noted for tobacco products, motor vehicles, electrical and communication products, chemical products, fruit, vegetables and feed products, meat, fish and dairy products, machinery and equipment and furniture and fixtures.

These reductions were partially offset by price decreases for petroleum products, rubber, leather and plastic products and pulp and paper products.

Note to readers

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp, paper, and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI.

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

- The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where
 - ss indicates the S-level commodity code (from 9 to 28)
 - mm indicates the M-level commodity code (from 14 to 43, 45 to 69)
 - nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details
 - pppp indicates the PCGA code (except for some special aggregations which include several PCGAs)
 - rr indicates a split of a PCGA.

**Table 3
Industrial Product Price Indexes, by Industry and Industry Groups (1997=100)**

		Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
ALL MANUFACTURING														
v3822562	2006	112.0	111.5	112.5	114.0	114.3	113.8	115.9	115.2	113.5	113.5	113.6	115.2	113.8
	2007	115.1
TOTAL EXCLUDING FOOD AND BEVERAGE MANUFACTURING

Note: Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.
2. The numeric code to the right of the CANSIM series number on the last line of each series is the 1997 North American Industry Classification System (NAICS) code.

Explanation of methods used and additional sources for industrial price indexes

Industrial Product Price Indexes (1997=100)

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (Catalogue 11-001-XIE) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in Tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

Price Surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997.

The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

Weight Base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w^i are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in the base period;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Historical Data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

Reference Documents

62-558-XPB Industry Price Indexes, 1986=100: Users' Guide, \$40.00.

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

62-556-XPB Industrial Product Price Indexes, 1981=100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address prices-prix@statcan.ca.

Raw materials price indexes (1997 = 100)

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's *The Daily* approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in Table 330-0006.

Historical Data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not

available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weight Base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(agg)} = \frac{\sum_i w^i \cdot P_{t/o}^i}{\sum_i w^i}$$

$P_{t/o}^{(agg)}$ denotes the composite price index movement between the base period o and time t for the defined aggregate;

w^i is the transaction value of the element i in 1997;

$P_{t/o}^i$ is the price index for element i , meaning its price change from the base period o to time t ;

\sum_i indicates summation over all elements i in the defined aggregate.

Reference Document

See reference document in IPPI.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address prices-prix@statcan.ca.

Electric Power Selling Price Indexes, Non-residential, (1997=100)

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in Table 329-0050. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone (613) 951-9606, facsimile (613) 951-1539, Internet address prices-prix@statcan.ca.
