Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Notice to readers

Most of the components used to produce preliminary population estimates are estimated using demographic models or based on data sources less complete or reliable, albeit more timely, than those used for updated or final estimates.

Charts

1.	Quarterly variation of population estimates, Canada, provinces and territories, April to June, 2005 and 2006	8
2.	Quarterly aggregated demographic components, April to June, 1972 to 2006, Canada	9

Highlights

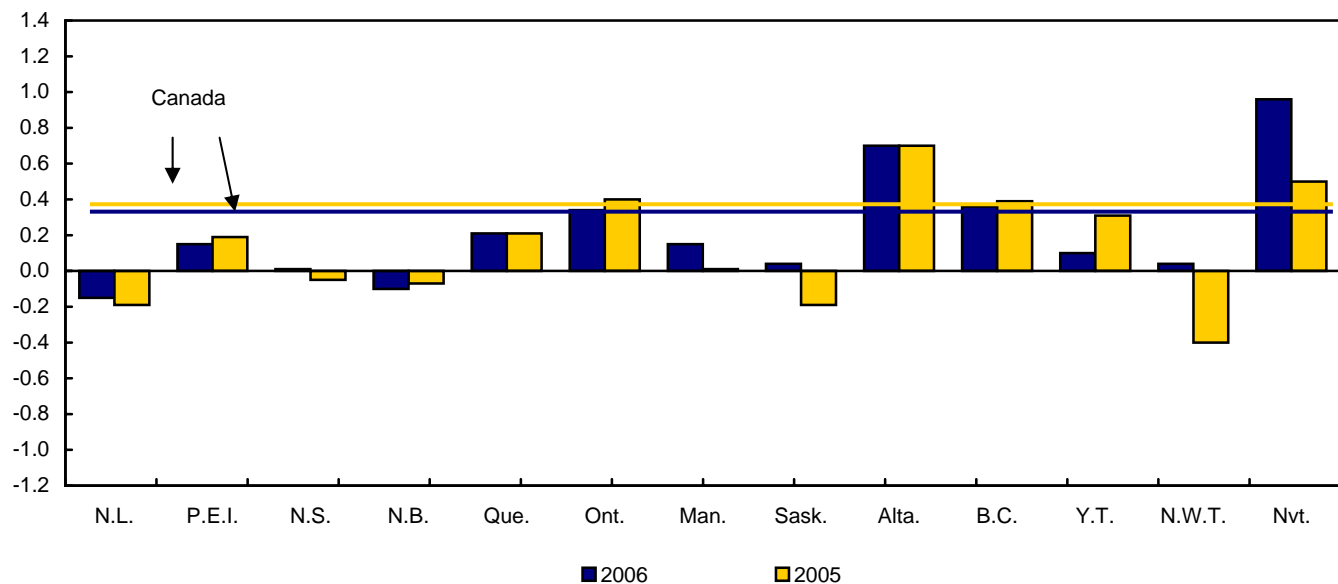

- On July 1, 2006, the population of Canada was estimated at 32,623,500 people, an increase of 99,600 since April 1. Demographic growth of the second quarter of 2006 (0.31%) was virtually identical to the average for same quarters of the last 10 years.
- Near 70.0% of Canada's demographic growth in the last quarter resulted net international migration. This proportion, stable since the beginning of the 2000's, is higher than what was observed before for a second quarter.
- Immigration remains high. Although the number of new arrivals (67,900) does not equal the historical record set in the same period of 2005 (74,500), it is still slightly higher than the average, for a second quarter, of the 2000 to 2005 period (66,900).
- Alberta (+0.70%) and Nunavut (+0.96%) continued to show a demographic growth by far higher than the Canadian average. For both jurisdictions, such a growth is mainly due to a strong net interprovincial migration.
- Quebec and Alberta registered an important increase in the number of births. For Quebec, this is the second consecutive quarter in which a considerable increase in births has been observed.

Analysis

On July 1, 2006, the population of Canada was estimated at 32,623,500 people, an increase of 99,600 since April 1. Demographic growth of the April and June 2006 period (0,31 %) was virtually identical to the average for second quarters of the last 10 years.

Chart 1

Quarterly variation of population estimates, Canada, provinces and territories, April to June, 2005 and 2006

Given the fact that natural growth in Canada has been declining for about fifteen years, although it has remained relatively stable since 2002, international migration continues to be the primary force driving the increase in Canada's population. Accordingly, 69.4% of Canada's demographic growth in the last quarter resulted from population shifts with other countries in the world. By comparison, net international migration accounted for an average of 52.1% of total growth in second quarters of the 1990's and for 41.3% during the 1980's.

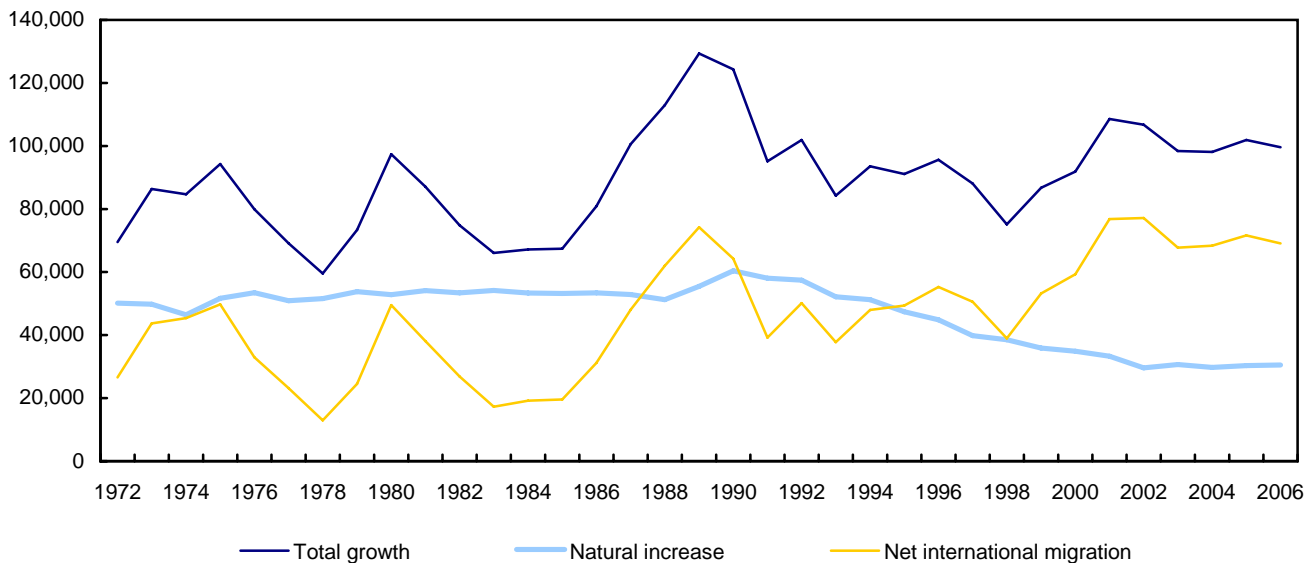

Immigration remains high. Although the number of new arrivals in April-June 2006 (67,900) does not equal the historical record set in the same period of 2005 (74,500), it is still slightly higher than the average, for a second quarter, of the 2000-2005 period (66,900).

An uneven population growth

Alberta is the province that continues to show the strongest demographic growth. Through this last quarter, the province's population grew by 0,70 %, more than twice faster than the Canadian average. In absolute numbers, the province gained more population (23,500) than during any second quarter since 1980 (23,900).

Among the territories, Nunavut stands out clearly with a growth rate (0,96 %) higher than Alberta and more than tripling the national growth. Nunavut's performance is due to its high birth rate and also to the highest net interprovincial migration (+140) in any second quarter since 2002 (350).

Chart 2
Quarterly aggregated demographic components, April to June, 1972 to 2006, Canada

British Columbia (0,36 %) and Ontario (0,34 %) are the other regions that showed a population increase above the national average. All other jurisdictions have seen positive demographic growth, though below the national average, with the exception of Newfoundland (-0,15 %) and New Brunswick (-0,10 %).

Some jurisdictions posted a far better second quarter in 2006 than in 2005. Due mainly to an improvement of their migratory numbers, Northwest Territories, Saskatchewan and Nova Scotia, which all lost population in the second quarter of 2005, gained population this year. Manitoba and Nunavut also showed better demographic numbers than last year.

An international migration attenuating the Alberta draw

Net interprovincial migration to Alberta (+11,400) in the second quarter of 2006 was lower than the figure for the same period in the previous year (+12,100). However, only twice in the past has such a high figure been registered in a second quarter.

It goes without saying that this kind of magnet affects the demographics of other provinces and territories. British Columbia (+2,300) and Nunavut (+140) and Prince-Edward Island (0) were the only other jurisdictions not to show a negative net interprovincial migration in the second quarter of 2006. Among the regions showing a deficit, New Brunswick posted record losses (-1,100) during the last quarter.

For several regions of Canada, net international migration continues to attenuate the effects of the Alberta draw. During the last quarter, international migration was the biggest driver of demographic growth in nine of the country's 13 jurisdictions. For example, net international migration accounted for 63.3% of population growth in British Columbia. The province was also one of the few Canadian jurisdictions to show an annualized net rate of international migration (+9.0 per thousand) above the national average (+8.5 per thousand), along with Ontario (+11.2 per thousand), Manitoba (+9.7 per thousand) and the Yukon (+9.0 per thousand).

In absolute numbers, Manitoba (2,700) and Alberta (5,400) set records for second quarter immigration. New Brunswick (500) and Saskatchewan (700) both received a larger number of immigrants than has been recorded at any time in more than 20 years.

Despite a reduction in net international and interprovincial migration compared to the same period in 2005, population growth in Quebec in this past quarter remained stable thanks to the highest increase in natural growth (+7,200) since 1998 (+7,500). This increase is partly due to a greater number of births. According to provisional data, 20,600 babies were born in Quebec during the past quarter, the highest figure for the same period since 1997 (21,600). This is the second consecutive quarter in which a considerable increase in births has been registered in Quebec.

The same can be said for Alberta which recorded 10,900 births during the last quarter. The number of births for a second quarter is steadily increasing since 2000 and one has to go back to 1992 (11,100) to observe as many babies.

P Preliminary data.

Note(s): Preliminary estimates based on data from the Child Tax Benefit (CTB) Program and Fjk factors calculated using 2001-2002, 2002-2003 and 2003-2004 tax file data from Canada Revenue Agency.

Quality of estimates

Post-2001 postcensal population estimates

The postcensal estimates contain certain inaccuracies stemming from:

- (a) errors in the 2001 Census data (the base population on which these estimates were constructed) and
- (b) imperfections in other data sources and the method used to estimate the components.

Errors in census data

Census data for total population by province or territory are affected by coverage errors. These errors occur when dwellings and/or individuals are missed, incorrectly included or counted more than once. Following each census, Statistics Canada undertakes coverage studies to measure these errors. The main study are the Reverse Record Check Survey (RRC) and the Census Overcoverage Study (COS). Based on these studies, estimates of net undercoverage (which is equal to the difference between undercoverage and overcoverage) are produced. Demography Division adjusts the population enumerated in the census by province and territory using these estimates.

Text table 1

Estimated net undercoverage of population for Canada, provinces and territories, 1996 and 2001 Censuses

	1996 ¹		2001 ¹	
	Number	Rate in percent	Number	Rate in percent
Canada	712,119	2.41	958,969	3.10
Newfoundland and Labrador	8,840	1.58	9,401	1.80
Prince Edward Island	896	0.66	1,325	0.97
Nova Scotia	21,126	2.27	24,521	2.63
New Brunswick	14,073	1.87	20,095	2.68
Quebec	102,680	1.42	152,880	2.07
Ontario	304,139	2.75	452,309	3.81
Manitoba	19,052	1.68	31,013	2.70
Saskatchewan	28,599	2.81	21,812	2.18
Alberta	71,971	2.60	74,834	2.45
British Columbia	137,446	3.56	164,805	4.05
Yukon Territory	467	1.50	1,423	4.73
Northwest Territories	1,979	4.75	3,295	8.11
Nunavut	851	3.33	1,256	4.49

1. The levels and rates are based on the Reverse Record Check (RRC) and the Overcoverage Study and include non-permanent residents.

The adjustment also incorporates the results of a study on the estimates of the number of people living on incompletely enumerated Indian reserves to complete the corrections for coverage errors in the census. The results of the coverage studies contain mainly sampling errors. For further information regarding the main coverage studies, please see the following document on Statistics Canada's web site: 2001 Census Technical Report on Coverage.

Errors coming from methodology and other data sources

Errors due to estimation methodologies and data sources other than the census are can also be significant.

Since the law requires the recording of vital statistics, births and deaths data meet very high standards. Nevertheless, since preliminary estimates are derived, they can be slightly different from final estimates.

With respect to immigrants and non-permanent residents, Citizenship and Immigration Canada administers special data files on both of these components. Since immigration is controlled by law (the Immigration Act), data on immigrants and non-permanent residents are compiled upon arrival in Canada. These data represent only "legal" immigration and exclude illegal immigrants. Thus, for the "legal" part of international movement into Canada, the data are considered to be of high quality.

However, some biases such as the difference between the stated province of intended residence at the time of arrival and the actual province of residence, may persist. Finally, since information provided by the Visitor Data System from Citizenship and Immigration Canada is not complete (age and sex of dependents, province of residence for certain groups of permit holders), estimates of nonpermanent residents are more prone to error than data on immigrants.

Estimates of the number of emigrants and returning emigrants are both derived using Child Tax Benefit (CTB) data provided by Canada Revenue Agency (CRA). Data are adjusted to take into account the incomplete coverage of the CTB program and to derive the emigration and returning emigration of adults. These adjustments and the delay in obtaining the data are the two main sources of errors.

As current information on the number of persons living temporarily abroad does not exist, estimates are based on the Reverse Record Check (RRC) and the census. Estimates for the intercensal period, distributed equally among the five years, are maintained constant for the postcensal period. Provincial/territorial distributions are obtained from RRC. Moreover, assumptions were made to allow for the distribution of annual to a quarterly level. Any geographical or quarterly variation may introduce error in the estimation of these components.

While preliminary estimates of interprovincial migration are produced using data from the Child Tax Benefit (CTB) program, final estimates are calculated from the annual taxfile received from Canada Revenue Agency (CRA). Since the two estimates of interprovincial migration are produced from different sources of information, they are more subject to error.

Quality assessment

In order to assess the quality of our estimates, two evaluation measures are used : precocity errors and errors of closure.

Precocity errors

The quality of preliminary estimates of components is analysed using precocity errors. Precocity error, which is calculated on a quarterly basis, is defined as the difference between preliminary and final estimate of a particular component in terms of its relative proportion of the total population for the relevant geographical area. It can be calculated for both population and component estimates.

Precocity error allows for useful comparisons between components, as well as between provinces and territories or geographical areas of different population size. Note that when compared to the total population for an area, the differences between preliminary and final estimates of the components are quite small. There are, however, differences in the amount of impact on the population estimates between components and between provinces and territories.

Generally speaking, net interprovincial migration yields the greatest precocity errors. This is likely the result of the use of different data sources for preliminary and final estimates of interprovincial migration. In most years and for most provinces/territories, births, deaths and immigration estimates yielded the smallest precocity errors. For immigration estimates, this reflects the completeness of the data source and the availability of data for the more timely preliminary estimates. In the case of births and deaths, small precocity errors support the use of short-term projections for preliminary estimates.

According to the analysis of the most recent precocity errors and assuming that the quality of the basic data remains constant, the present postcensal estimates should have an acceptable degree of reliability.

Errors of closure

The error of closure measures the exactness level of the final postcensal estimates. It can be defined as the difference between the enumerated population of the most recent census (after adjustments for net undercoverage) and the most current postcensal population estimates as of census day.

The error of closure comes from two sources: differences in the amount of net undercoverage and errors in the components of population change over the intercensal period. This can be calculated for population estimates and for age, sex and marital status. With each 5-year intercensal period, the error of closure can only be calculated with the release of census data and estimates of net undercoverage.

By dividing the error of closure by the adjusted census population rates are relatively small at the national level (0.38% for 1996 and 0.15% for 2001). At the provincial and territorial level, differences are understandably larger, since the estimates are also affected by errors in estimating interprovincial migration. Nevertheless, the provincial/territorial final postcensal estimates generally fall within 1% of the adjusted census population.

Text table 3

Error of closure of the estimates of total population for Canada, provinces and territories, July 1, 1996 and 2001

	1996		2001	
	Number	Rate in percent	Number	Rate in percent
Canada	113,416	0.38	46,467	0.15
Newfoundland and Labrador	8,840	1.58	11,416	2.19
Prince Edward Island	411	0.30	1,481	1.08
Nova Scotia	6,446	0.69	9,034	0.97
New Brunswick	5,634	0.75	4,638	0.62
Quebec	96,449	1.33	-320	0.00
Ontario	56,479	0.51	8,857	0.07
Manitoba	-852	-0.08	-1,121	-0.10
Saskatchewan	-7,400	-0.73	15,952	1.59
Alberta	-8,124	-0.29	714	0.02
British Columbia	-43,313	-1.12	-4,357	-0.11
Yukon Territory	-244	-0.78	-354	-1.18
Northwest Territories	-42	-0.10	481	1.18
Nunavut	-868	-3.39	46	0.16

Note(s): The error of closure is equal to the July 1 postcensal estimate minus the census count adjusted to July 1 and for net census undercoverage. The percentage is: error of closure, divided by the census count adjusted to July 1 and for net census undercoverage, multiplied by 100.

Explanatory notes for the tables

Table 3
Quarterly population estimates and aggregated demographic components

Population	Population estimates are final postcensal from July 1, 2001 to July 1, 2003, updated postcensal from October 1, 2003 to April 1, 2006 and preliminary postcensal from July 1, 2006.
Natural increase	Natural increase is final up to December 2003, updated from January 2004 to March 2006 and preliminary from April 2006.
Interprovincial migration	Net interprovincial migration numbers are final up to June 2005 and preliminary from July 2005.
International migration	Net international migration numbers are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006.
Total migration	Total net migration numbers are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006
Total growth	Numbers for total growth are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006

Table 4
Quarterly estimates of demographic components

Births	The numbers of births are final up to December 2004, updated from January 2005 to March 2006 and preliminary from April 2006.
Deaths	The numbers of deaths are final up to December 2003, updated from January 2004 to March 2006 and preliminary from April 2006.
In-migrants	The numbers of interprovincial in-migrants are final up to June 2005 and preliminary from July 2005.
Out-migrants	The numbers of interprovincial out-migrants are final up to June 2005 and preliminary from July 2005.
Immigrants	The numbers of immigrants are final up to December 2004, updated from January 2005 to March 2006 and preliminary from April 2006.
Emigrants	The numbers of emigrants are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006.
Returning emigrants	The numbers of returning emigrants are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006.

Net temporary emigrants

The numbers of net temporary emigrants are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006.

Net non-permanent residents

The numbers of net non-permanent residents are final up to June 2003, updated from July 2003 to March 2006 and preliminary from April 2006.

Appendix I

Glossary

Annualized rate

Refers to the ratio of the estimated number of events converted to an annual basis divided by the average quarterly populations. In this respect, birth, death, immigration rates, etc are calculated. Generally, the rate is expressed in per 1,000.

Census coverage

Net undercoverage: Difference between undercoverage and overcoverage.

Overcoverage: Number of persons who should not have been counted in the census or who were counted more than once.

Undercoverage: Number of persons who were intended to have been enumerated in a census but were not enumerated.

Components of demographic growth

Any of the classes of events generating population movement variations. Births, deaths and migrations are the components responsible for the variation since they alter the total population.

Emigrants

Canadian citizen or **immigrant** who has left Canada to establish a permanent residence in another country.

Error of closure

Difference between the **postcensal estimate** for the same date as the census and the results of the census adjusted for **net undercoverage**.

Immigrant

Within the framework of this publication, the term immigrant refers to **landed immigrant**. A landed immigrant is a person who does not have Canadian citizenship but was granted the right by immigration authorities to live in Canada on a permanent basis.oes here

International migration

International migration represents movement of population between Canada and a foreign country which involves a change in the usual place of residence. A distinction is made with regard to **immigrants, emigrants, returning emigrants, net temporary emigrants** and **net non-permanent residents**.

Interprovincial migration

Interprovincial migration represents movement from one province or territory involving a permanent change in residence. A person who takes up residence in another province or territory is an **out-migrant** with reference to the province or territory of origin and an **in-migrant** with reference to the province or territory of destination.

Natural increase

Variation in population size over a given period as a result of the difference between the numbers of births and deaths.

Net international migration

Net international migration is obtained according to the following formula: **Immigrants + returning emigrants + net non permanent residents – (emigrants + net temporary emigrants)**

Net interprovincial migration

Net interprovincial migration represents the difference between **in-migrants** and **out-migrants** for a given province or territory.

Net non-permanent residents

Net non-permanent residents represent the variation in the number of non-permanent residents between two dates.

Non-permanent residents

A non permanent resident belongs to one of the five following groups:

- persons residing in Canada claiming refugee status;
- persons residing in Canada who hold a study permit;
- persons residing in Canada who hold a work permit;
- persons residing in Canada who hold a minister's permit;
- all non-Canadian born dependants of persons claiming refugee status, or of persons holding study permits, work permits or minister's permits and living in Canada.

Net temporary emigration

Net temporary emigration represents the variation in the number of temporary emigrants between two dates. Temporary emigration includes Canadian citizens and **immigrants** living temporarily abroad who have not maintained a usual place of residence in Canada.

Population

Estimated population and population according to the census are both defined as being the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered **non-permanent residents**.

Population estimate

- (a) **postcensal**: Population estimate produced by using data from the most recent available census adjusted for **net undercoverage** and estimate of the **components of demographic growth** since that last census. This estimate can be preliminary, updated or final.
- (b) **intercensal**: Population estimate derived by using **postcensal estimates** and data adjusted for **net undercoverage** of censuses preceding and following the year in question.

Population growth or total growth

Variation of population size between two dates. It can also be obtained by summing the **natural increase**, **total net migration** and if possible, **residual deviation**. It can be positive or negative.

Residual deviation

Difference between demographic **population growth** calculated using **intercensal estimates** of population between two dates and that obtained by the sum of the components for the same period. This deviation results from the distribution of the **error of closure** between years within the quinquennial period.

Returning emigrants

Canadian citizen or **immigrant** having previously emigrated from Canada and subsequently returned to the country.

Total net migration

Sum of **net international** and **net interprovincial** migration.

Vital events

Includes all the demographic events (that is to say births, deaths, marriages and divorces) for which there exists a legal requirement to inform the Provincial or Territorial Registrar's Office.

Appendix II

Sources and remarks

Base population

May 15, 2001 Census of Population, adjusted to July 1 and for net undercount.

Statistics Canada, **Census of Canada, 2001**, Catalogue no. 93-360-X.

Births and deaths

Statistics Canada, Health Statistics Division.

Statistics Canada, Demography Division, Catalogue no. 91-002-X, Quarterly, Analytical table 5.

Immigration

Citizenship and Immigration Canada

Emigrants

Statistics Canada, Demography Division - from data on emigrant children from the Child Tax Benefit program (CTB) from Canada Revenue Agency files - CRA and data from the "U.S.Department of Homeland Security, Office of Immigration Statistics"

Returning emigrants

Statistics Canada, Demography Division – based on data from the CTB program and adjustment factors calculated using CRA files.

Net temporary emigrants

Statistics Canada, Demography Division – based on data from the Reverse Record Check (RRC), 1996 and 2001 Censuses of Canada.

Non-permanent residents

Statistics Canada, Demography Division – based on data provided by Citizenship and Immigration Canada.

Interprovincial migration

Statistics Canada, Demography Division – based on the CTB program and adjustment factors calculated using CRA files.
