## How to Use this Electronic Guide

This guide was created in Adobe ${ }^{T M}$ Acrobat ${ }^{T M}$, and provides you with some convenient tools for finding your way around this document.

## Hypertext Links

By clicking on this symbol or on text outlined in green, you will be moved automatically to the corresponding area of the document. Click on any section listed in the Table of Contents and you are taken to the corresponding page. If a description continues on a following page, an arrow will appear at the bottom of the page. Advance to the next page by clicking on this arrow.

When browsing sample tables, return to the product description anytime by clicking on the title area of the table.

## Tool Bar Buttons

The button bar located at the top of the screen contains a number of tools which you can use to view the document. Included are several buttons to search for specific words, to move to the next or previous pages or to move to the beginning or end of the document. For more information on these and other tools, select Help from the menu at the very top of the screen.

## Printing

From the File menu at the top left hand corner of the screen, choose Print or Print Setup. These menus allow you to select printer destination and specify print options.

## Small Area and Administrative Data Division

Main Building, Room 1306
Tunney's Pasture
Ottawa, Ontario K1A 0T6

Client Services: (613) 951-9720
Fax: (613) 951-4745
e-mail: saadinfo@statcan.ca

Consult the list of Regional Offices for the reference centre serving your area.

## What's New?

Neighbourhood Income and Demographics: The release of the 1999 data included a new table -Table 6: Income Taxes, Selected Deductions and Benefits. This table shows the federal and provincial taxes paid, the capital gains received, certain deductions claimed, benefits received as well as the total income before taxes.
(2) Product Description

* Sample Table

Canadian Capital Gains: Starting with the1998 tax year, a new standard table is available presenting general information on taxfilers receiving capital gains. This table shows the count of receivers of capital gains and the total amount of these gains. Counts and amounts are then broken down according to income groups.

(2) Product Description

Sample Table

## What's Improved?

Labour Force Income Profiles: The 1998 databank featured an improved profile of the Labour Force population. In addition to counts and amounts of total employment income, this table now includes information on taxfilers receiving wages and salaries only, taxfilers reporting self-employment income only and taxfilers reporting a combination of both.

(2) Product Description

( $)$ Sample Table

## Small Area Data - An Introduction

From the income tax forms submitted each year by Canadians, the Small Area and Administrative Data Division produces a wealth of economic and demographic information for use by both the private and public sectors. Over 21 million records are processed each year to provide the most detailed and accurate data possible. In fact, the information represents approximately $96 \%$ of the Canadian population.

These data are matched to a number of geographic files providing clients the opportunity to request data for areas as small as a letter carrier's walk.

A variety of databanks have been designed to allow for quick retrieval of information based on the specific needs of a client.

## What does Small Area and Administrative Data Division have to offer?

## Financial Data

From October to December of each year, information is released for use by the financial community based on the previous year's income tax returns (e.g.. 2000 data released in November 2001).

After the Canada Customs and Revenue Agency provides Statistics Canada with the data, they are processed over a three-week period to produce a timely and accurate picture of the saving, investing and retirement planning habits of individuals throughout Canada. Released just before the RRSP season, the data provide the information needed to help pinpoint marketing campaigns.

## Charitable Donors

Data for Charitable Donors across the country are released along with the Financial Data. Many charitable organizations, both local and national, use these data to target their fundraising efforts.

## Data on Families and Individuals

Once the financial databanks have been developed, efforts are then concentrated on fine-tuning the data to produce comprehensive information on Canadians and their families. These data are released throughout the following summer (e.g.. 1999 data released in August 2001).

The databanks on families and on individuals (aggregated to protect the confidentiality of Canadian citizens) cover everything from the types of families to the dependency of taxfilers and families on government transfer payments. They have proven to be an invaluable source of information for marketers, policy makers, small businesses, researchers and others.

## Why Use Small Area Data?

With small area data you can:

- use urban postal codes as building blocks to identify special, user-defined areas
- pinpoint markets of interest to target your products and services
- focus your marketing campaigns
- combine the information with your own client database
- manipulate the data according to your needs
- make informed policy decisions.

Our clients have realized a wide range of benefits by using small area data. For example:

- Financial institutions are using the family data to identify best branch office locations; they are using the financial data to target their marketing campaigns.
- Towns are using the Postal Area Profiles to make policy decisions. Further, economic development officers are using these same profiles to measure the health of their community and to attract new businesses.
- Small businesses are using the Neighbourhood Income \& Demographics data to decide where to focus their direct marketing campaigns.
- Governments of all levels are using the Migration Estimates for urban and economic planning, some incorporating these into their own population models.

## Small Area Geographic Coverage

Increasingly, demands are made for data at smaller and smaller geographic levels. Small Area and Administrative Data Division was formed to meet these demands. Data are available for over 28,000 postal areas, some Census areas, the Provinces and Territories, Canada. Clients may also designate special User-defined areas.

User-defined areas include branch service or school catchment areas, neighbourhoods or almost any other region. Simply provide us with the postal codes related to the area and we will compile the data. For more information, please see Special Orders for Small Area Data.

For Postal Geography, data are available for areas as small as a letter carrier's walk, Forward Sortation Area, rural route, city, etc. For a detailed description of the geography available, see Geographic Indicators. Data at all levels of geography are subject to confidentiality restrictions; confidentiality of Canadians is always protected and never compromised.

Plus, receive a Concordance File FREE with every purchase of electronic data at the postal walk level. This file, which lists all of the urban residential six-character postal codes related to your data and identifies the postal walk to which each is assigned, will enable you to better use the data. (Generally, nonresidential postal codes, general deliveries and post office boxes are excluded from a Concordance File.)

## High Quality and Timely Data are Our Primary Goals

Each year Small Area and Administrative Data Division examines and processes over 21 million tax and other administrative records in an effort to give our clients the most reliable information possible. The data are highly accurate as they are a direct count from the tax file ( $100 \%$ ) - not a sample - and cover approximately $96 \%$ of the population. Edits and imputations are also performed to assure data quality and consistency.

Our information products are all released on an annual basis to provide some of the most timely sources of economic and demographic data available.

## Confidentiality Restrictions

## Confidentiality of Canadians is always protected:

Data are suppressed to avoid disclosure when geographic areas comprise fewer than 100 taxfilers or characteristics are shared by fewer than 15 taxfilers; remaining data are rounded and tested for dominance and for residual disclosure.

## Every Order is a Custom Order

By developing a series of standard tables for each databank, a unique system has been created where you can specify the table you require at the geographic level you require. If, for example, you want Family Data but don't need all 18 tables, you can select just those tables of interest to you. Or, choose a combination of tables from the different databanks. You can also order Small Area data tables for almost any geographic area, right down to the postal walk level!

## Format and Medium

The information can be provided to you in almost any format. We can supply you with electronic data files and/or present the data in tabular format on paper.
When ordering data files, the information will be provided in the format that best suits your needs, i.e., Excel, ASCII, Lotus, Paradox, etc. Plus, you have several different options from which to choose to receive the data - diskette, CD-ROM, paper, cartridge. Need it fast? Electronic tables can be sent via the Internet for fast delivery. Prefer paper? We can fax the tables directly to you.

## Require More Information or Want to Place an Order?

The staff at each of Statistics Canada's Regional Offices has been specially trained in Small Area and Administrative Data Division's products and services to provide you with expert assistance. Simply contact the office nearest you.

## SMALL AREA DATA PRODUCTS \& SERVICES

Small area data are available through the following databank products and special services. Our standard databank products have been designed so you can choose only those tables which best suit your needs. And, by ordering tables from several different sources, you can get
even more power from the data.
To view samples of the tables, click on the $\boldsymbol{\theta}$.

## Family Data

The Family databank approximates the total Canadian population and its eighteen tables provide a detailed portrait of Canadian families. It contains demographic indicators and a wealth of information on sources of income. The data, released each summer, are based on the income tax returns filed in April of the preceding year (e.g.. 1999 data were released August 2001 from returns filed in spring 2000).

The development of small area family data is based on the census family concept. This concept, specific to Statistics Canada, is similar to the traditional family concept.

Taxfilers from the same family, including children, are matched using common links (e.g., same name, same address). When there are indications that one or several members of the family are missing (for instance children), those members are imputed. The remaining taxfilers who have not been matched in the family formation process become non-family persons.

Eighteen different tables are available for Family Data:

1. Summary Table (provides some highlights of the data available in tables 2-14)
2. 2. Number of Persons by Age Group and by Family Type
1. 3. Number of Families by Age of Older Parent and by Number of Children
1. 4. Number of Family Units by Total Income and by Age of Older Spouse
1. 5umber of Families by Total Income and by Number of Children

6 6. Sources of Income by Family Type
(4) Economic Dependency Profile of Husband-Wife Families
(6) 8. Economic Dependency Profile of Lone Parent Families and Non-Family Persons
9. Labour Force Profile of Husband-Wife Families
2. 10. Labour Force Profile of Lone Parent Families and Non-Family Persons
11. Labour Force by Age Group and Gender
(2) 12. Employment Insurance by Age Group and Gender
13. Single-Earner and Dual-Earner Families by Number of Children
6) 14. Husband-Wife Families by Percentage of Wife's Contribution to Husband-Wife Employment Income

Historical availability: The first 14 tables of this series are available since 1990, with some changes to the table contents and/or layout over time. Tables 15 and 16 are available starting with the 1993 data; table 17 is available starting with the 1995 data and table 18 with the 1997 data. Limited information on husband-wife families is available previous to 1990.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions and census metropolitan areas.
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Family Data User's Guide. Download your own copy of the User's Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4105a.pdf to access the PDF version of the guide.

## Seniors

Product \# 89C0022

The Seniors databank contains demographic information on senior families and senior individuals. More than just data for Canadians $65+$, aggregated data are provided about families and individuals from 55 years of age to give more comprehensive information on the aging population. A senior family has been defined as one in which the eldest family member is 55 years of age and older. The data, released each summer, are based on the income tax returns filed in April of the preceding year (e.g.. 1999 data were released in August 2001 from returns filed in spring 2000).

Five tables are available from which to choose:
(1. Number of Senior Family Units by Age Group
2. Number of Individuals in Senior Family Units by Age and Gender
2. 3. Sources of Income of Senior Husband-Wife Families
(2) 4. Sources of Income of Senior Lone Parent Families and Senior Non-Family Persons
5. Sources of Income of Senior Individuals by Age Group

Historical availability: Tables 1 to 4 from this databank are available starting with 1990 data, and Table 5 with the 1994 data, with some changes to the table contents and/or layout over time.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions and census metropolitan areas.
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Seniors Data User' s Guide. Download your own copy of the User's Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4105c.pdf to access the PDF version of the guide.

## Neighbourhood Income \& Demographics

This product characterizes the Canadian population by income and demographics. Income information is generated for all taxfilers and dependents with Total Income. Demographic data, provided for the entire population, include marital status, gender, age groups and single years of age. The data, released each summer, are based on the income tax returns filed in April of the preceding year (e.g.. 1999 data were released in August 2001 from returns filed in spring 2000).

Choose from six data-packed tables:

1. Summary Table - includes data for five categories:
! taxfilers
! taxfilers and dependents
! total income
! persons reporting employment income and/or Employment Insurance ! persons reporting Canada Child Tax Benefits
2. Taxfilers and Dependents by Marital Status and by Age Group
3. Taxfilers and Dependents by Single Year of Age
4. Taxfilers and Dependents with Total Income by Source of Income
5. 5. Taxfilers and Dependents with Total Income by Total Income, Sex and Age Group

## Something new in 1999...

6. Taxfilers and Dependents with Total Income by Income Taxes, Selected Deductions and Benefits

Historical availability: The data for standard tables 1, 2, 4 and 5 are available from this databank starting with 1986 data, with some changes to the table contents and/or layout over time. Table 3 is available starting with 1994 data, and Table 6 with the 1999 data.

Geographic availability: All tables are available for postal areas (letter carrier routes and up) for all years. Data for census divisions became available in 1990 and census metropolitan areas in 1991.
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Neighbourhood Income and Demographics User' s Guide. Download your own copy of the User's Guide, free on Statistics Canada's Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4105b.pdf to access the PDF version of the guide.

## Economic Dependency Profiles

A region' s dependency on government transfer payments is demonstrated through the Economic Dependency Ratio (EDR). This ratio is defined as the ratio of transfer payment dollars to every $\$ 100$ of employment income reported for the area. The data, released each summer, are based on the income tax returns filed in April of the preceding year (e.g.. 1999 data were released in August 2001 from returns filed in spring 2000).
(2) The data are presented in a single table, by gender, and include:
! the number of taxfilers, type of transfer payment and employment income ! the amount of income reported by type of transfer payment
! Economic Dependency Ratio (EDR) - the ratio of transfer payment dollars to every hundred dollars of employment income
! the EDR for the area expressed as a percentage of the provincial or Canadian EDR

Historical availability: The Economic Dependency Profile is available starting with 1989 data, with some changes to the table contents and/or layout over time.

Geographic availability: This table is available for postal areas (letter carrier routes and up), census divisions and census metropolitan areas.
(i)

Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Economic Dependency Profiles User' s Guide.
Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4105f.pdf to access the PDF version of the guide.

## Labour Force Income Profiles

Profiled here are Canadians who report employment and/or unemployment income (i.e., the labour force). The data, released each summer, are based on the income tax returns filed in April of the preceding year (e.g.. 1999 data were released in August 2001 from returns filed in spring 2000).
(4) Provided in a single table, data include:
! the number of taxfilers reporting total income and labour force income ${ }^{1}$
! the amount of each type of income
! the median total income and the median employment income
! index of median income for the geographic area compared to the provincial and the national median incomes

## Something new...

! the number of taxfilers reporting wages, salaries and commissions only
! the number of taxfilers reporting self-employment only
! the number of taxfilers reporting income from wages, salaries, commissions and from self-employment
! the amount of each type of income

## Notes:

1 Labour force income: employment/self-employment income and/or Employment Insurance benefits.

Historical availability: The Labour Force Income Profile is available starting with 1989 data, with changes to the table contents and/or layout over time.

Geographic availability: This table is available for postal areas (letter carrier routes and up), census divisions and census metropolitan areas.
(1) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Labour Force Income Profiles User' s Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4105e.pdf to access the PDF version of the guide.

## Postal Area Profiles

These annual profiles are intended primarily for small rural areas identified by a single rural postal code, and provide an annual "report card" of the area. Each table in a profile provides information for a four-year period. The data are released each fall based on the income tax returns filed in April of the preceding year (e.g.. 1999 data were released in fall 2001 from returns filed in spring 2000).

Five tables are available for Postal Area Profiles. They are:
(1. Taxfilers and Dependents (by age group
(2) 2. Selected Sources of Income
(2) Labour Force Participation
(6) 4. Population Dependency and Economic Dependency Ratio (EDR) ${ }^{1}$
(2) 5. Characteristics of Families ${ }^{2}$

## Notes:

1 The Economic Dependency Ratio is the ratio of transfer payment dollars to every hundred dollars of employment income

2 Family types include: Husband-Wife families, Lone-Parent families and Non-Family Persons.

Historical availability: The first Postal Area Profile presents data for the 1991-1994 period.
Geographic availability: Data are available for postal areas (Forward Sortation Areas and up), census divisions (since 1999) and census metropolitan areas (since 1999). Note that postal areas do not necessarily coincide with legal municipal boundaries.
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Postal Area Profiles User's Guide. Download your own copy of the User's Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4105d.pdf to access the PDF version of the guide.

## Migration Estimates

The movements of people to Canada and within Canada are tracked in this databank. Updated annually from comparisons of two consecutive years of tax files, the preliminary data on international migration and final data on internal migration are normally available 15 to 18 months after the tax filing deadline. Final international data are usually available six months later.

The data developed from taxation records are estimates of migration flows between census divisions (CDs) or census metropolitan areas (CMAs) by gender and broad age groups. Data are provided in complete tables and are presented for a five-year period. For further information on the methodology of this modelled product, contact the Regional Office nearest you.

Data, presented for a five-year period, are available in four complete tables:
(2. By Province of Origin/Destination ${ }^{1}$
(3) By Age Group ${ }^{1}$
C. By Type of Migration and Sex ${ }^{1,2}$
(2) D. Major Flows ${ }^{3}$ by Census Division of Origin/Destination, or by Census Metropolitan Area/non-Census Metropolitan Area of Origin/Destination

## Notes:

1 Provincial totals shown in tables include movements within the province.
2 Types of Migration are:
Intraprovincial Migration: Movement between two CDs or CMAs located within the same province.
The CD/CMA of departure is the CD/CMA of origin and the CD/CMA of arrival is the CD/CMA of destination.
Interprovincial Migration: Movement between CDs or CMAs located in two different provinces. The province of departure is the province of origin and the province of arrival is the province of destination.
International Migration: Movement between an area in Canada and another country. International migration is divided in two categories: immigration and emigration.

3 Major Flows: In all cases, the gross migration flow between CDs or CMAs for the current migration period must be at least 10 migrants. Flows are listed in descending order of net migration for the most recent year of migration.

Historical availability: Standard tables are available from this databank starting with 1985-86 data.

Geographic availability: Data from Tables $A, B$ and $C$ are available for census divisions and census metropolitan areas (since 1992-93), including provincial and territorial totals. Provincial and territorial totals are not available for Table D.
(1) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Migration Estimates User' s Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4101.pdf to access the PDF version of the guide.

## RRSP Contributors

This databank provides information on Canadian taxfilers who contributed to an RRSP during the tax year under review. The data are released each fall based on the previous year' s income tax returns (e.g.. 2000 data were released in November 2001 from returns filed in spring 2001).

Registered Retirement Savings Plan (RRSP) is an individual retirement savings plan that is registered by the Canada Customs and Revenue Agency. It permits limited contributions, and income earned in the RRSP is exempt from tax until payments are received from the plan.

## Four tables are available for RRSP Contributors:

1. Summary (highlighting the number of contributors, average age, median employment income and contributions)
2. 2. Age Groups
(t) 3. Sex
(4) 4. Income Groups

Historical availability: Table 1 is available from this databank starting with 1990 data. Tables 2 and 3 were first introduced with the 1994 data series, and Table 4 with the 1997 data. Some changes have been made to the table contents and/or layout.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions (since 1994) and census metropolitan areas (since 1993).
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User' s Guide. Download your own copy of the User's Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## RRSP Contribution Limit (Room)

This product provides information on the RRSP contribution limit (room) available to individuals for a particular tax year. Released months before the closing date for contributions, the data are a valuable resource tool.

The room is determined from the earned income of the previous year, to a maximum, reduced by a pension adjustment. For example, the earned income of 2000 determines the contribution limit for 2001. The Canada Customs and Revenue Agency has allowed contributions for a tax year to be made up to and including January and February of the subsequent year. The data are released each winter based on the previous year's income tax returns (e.g.. Contribution limits for 2001 were released in November 2001 from returns filed in spring 2001).

The data provided consist of 3 different variables: New Room; Unused Room; and Total Room.

New Room is the maximum amount of dollars (contribution limit) a taxfiler is eligible to contribute and deduct for RRSPs for the tax year based on only the previous year' s earned income. This amount excludes Unused Room.

Unused Room is the amount of eligible dollars a taxfiler did not deduct for RRSPs on previous tax returns. Unused Room can be carried forward to subsequent years. The first year of Unused Room is 1991.

Total Room is the sum of New and Unused Room and is the cumulative amount a taxfiler can contribute and deduct in the tax year.

There are two RRSP room tables:

1. People with Room (provides a breakdown of RRSP Room by Total, New and Unused Room)
2. Characteristics of People with New Room (provides economic and demographic characteristics of people with New Room)

Historical availability: Standard tables are available from this databank starting with 1993 data.
Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions (since 1994) and census metropolitan areas.
(1) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User's Guide. Download your own copy of the User's Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## Canadian Savers

Savers are identified as taxfilers who reported interest and other investment income on line 121 of their personal income tax return, and reported no dividend income on line 120. These data are released each fall based on the previous year' s income tax returns (e.g.. 1999 data were released in October 2000 from returns filed in Spring 2000). For information on line 120 see Canadian Investors.

Interest income and other investment income sources include interest from Canada Savings Bonds, bank accounts, treasury bills, investment certificates, term deposits, earnings on life insurance policies as well as foreign interest and foreign dividend income.

## There are four tables available for Canadian Savers:

1. Summary (highlighting the number of savers, average age, median total income, total interest income and median interest income)
2. Age Groups
d 3. Sex
C) 4. Income Groups

Historical availability: Standard tables are available from this databank starting with 1990 data. Tables 2 and 3 were first introduced with the 1995 data series, and Table 4 with the 1997 data. Some changes have been made to the table contents and/or layout.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions (since 1995) and census metropolitan areas (since 1993).
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User's Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## Canadian Investors

Investors are persons who reported dividend income on line 120 of their personal tax return (adjusted); they may or may not have reported interest or other investment income on line 121. When income is reported on line 121 it is added to the amount of dividend income received, and the sum becomes the investment income of the investor.

These data are released each fall based on the previous year' s income tax returns (e.g.. 2000 data were released in November 2001 from returns filed in spring 2001). For further information on line 121 see Canadian Savers.

Dividend income is defined as dividends from taxable Canadian corporations, such as stocks or mutual funds. This is the adjusted amount that was received by the individual, not the inflated taxable amount.

## Four tables are available for Canadian Investors:

1. Summary (highlighting the number of investors, average age, median total income, total investment income, percentage derived from dividends and median investment income)
(2) 2. Age Groups
(t) 3. Sex
(4) 4. Income Groups

Historical availability: The summary table is available from this databank starting with 1990 data. Tables 2 and 3 were first introduced with the 1995 data series, and Table 4 with the 1997 data. Some changes have been made to the table contents and/or layout.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions (since 1995) and census metropolitan areas (since 1993).
(1) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User' s Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## Canadian Investment Income

Canadian Investment Income is the sum of the Savers and Investors - the dividend income reported on line 120 (adjusted) and the interest and other investment income reported on line 121 of the tax return. These data are released each fall based on the previous year' s income tax returns (e.g.. 2000 data were released in November 2001 from returns filed in spring 2001). For further information see Canadian Savers and Canadian Investors.

Four tables are available for Canadian Investment Income:
d 1. Summary (highlighting the number of receivers of investment income, average age, median total income, total investment and median investment income)
(2. Age Groups
3. Sex

C 4. Income Groups

Historical availability: The summary table is available from this databank starting with 1990 data. Tables 2 and 3 were first introduced with the 1995 data series, and Table 4 is available starting with 1997 data. Some changes have been made to the table contents and/or layout.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions (since 1995) and census metropolitan areas (since 1993).
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User's Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## Canadian Taxfilers

This databank provides demographic and income profiles of all Canadians who filed a personal tax return in the reference year. The data are released each fall based on the previous year's income tax returns (e.g.. 2000 data were released in November 2001 from returns filed in spring 2001).

## Two standard tables are available for Canadian Taxfilers:

d 1. Summary
! the number of taxfilers
! the percentage of taxfilers who filed a French tax form
! the percentage of taxfilers in various age groups
! the average age of taxfilers
! median and 75th percentile of total income and employment income
! the percentage reporting income greater than $\$ 51,000^{1}$ and $\$ 76,000^{2}$
() 2. Income Groups

## Note:

1 This figure represents the $85^{\text {th }}$ percentile of total income in Canada for 2000; 85\% of incomes reported were below $\$ 51,000$ and $15 \%$ were above.

2 This figure represents the $95^{\text {th }}$ percentile of total income in Canada for 2000; 95\% of incomes reported were below \$76,000 and 5\% were above.

Historical availability: Table 1 is available starting with 1990 data and Table 2 with 1997 data.
Geographic availability: Both tables are available for postal areas (letter carrier routes and up), census divisions (since 1995) and census metropolitan areas (since 1993).
(1) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User' s Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## Canadian Capital Gains

This databank provides a first look at taxfilers who receive capital gains. Canadians report capital gains following the sale or disposal of property, such as the sale of real estate, farm property, corporation shares, bonds and other types of properties.

These data are released in the fall and are based on the previous year' s income tax returns (e.g.. 2000 data were released in November 2001 from returns filed in spring 2001).

One standard table is available for Canadian Capital Gains:
(1. Income Groups
! the number of taxfilers
! the number of taxfilers reporting capital gains
! the percentage of receivers of capital gains by income group
! the total value of capital gains reported
! the percentage of capital gains associated to each income group

Historical availability: The standard table is available from this databank starting with 1998 data.
Geographic availability: This table is available for postal areas (letter carrier routes and up), census divisions and census metropolitan areas.
(1) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User' s Guide. Download your own copy of the User' s Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106b.pdf to access the PDF version of the guide.

## Charitable Donors

These data profile individuals who reported donations to registered charitable organizations on line 340 of the tax return. Charitable donations can be claimed on tax returns up to 5 years after the donation was made. Persons who make charitable donations but do not claim them on their personal tax return are not included in this databank.

Charitable donation information is released around December of each year based on income tax returns filed in April of the same year (e.g.. 2000 data were released in November 2001 from returns filed in spring 2001).

Choose from three standard tables:

1. Summary (highlighting the number of donors, average age, average donations, total and median donations, median and 75th percentile of total income)
2. 2. Age and Sex
(2) 3. Income Ranges

Historical availability: The summary table is available from this databank starting with 1990 data. Table 2 was first introduced with the 1995 data series and Table 3 with the 1997 data. Some changes have been made to the table contents and/or layout.

Geographic availability: All tables are available for postal areas (letter carrier routes and up), census divisions (since 1995) and census metropolitan areas (since 1993).
(i) Further information on methodology, data quality, historical availability, variable definitions and geography descriptions can be found in the Financial Databanks User' s Guide. Download your own copy of the User's Guide, free on Statistics Canada' s Web site. Click on the following hyperlink http://www.statcan.ca/english/concepts/quality/4106a.pdf to access the PDF version of the guide.
(i) The latest summary statistics for Canada and the provinces are available free of charge on Statistics Canada' s Web site. See Canadian Statistics - http://www.statcan.ca/english/Pgdb/People/Families/famil90.htm
(i) Data for census metropolitan areas are available on Statistics Canada' s Web site. Search the Cansim II database for the following table numbers: 111-0001 (Summary Table), 111-0002 (Age and Sex) or 111-0003 (Income Groups).

## Special Orders for Small Area Data

Product \# 61C9956

Customized products can also be designed from small area data to meet your specific needs. There are four different ways Special Orders for Small Area Data may be requested:

1. You may purchase data from any of the databanks described in this guide and have the information adapted to your specifications. For example, we can sort and/or rank the data by different variables.
2. If you require information at geographic levels different from what we offer (e.g., branch service areas, school catchment areas, etc.), we can produce data for your area(s) ${ }^{1}$. Simply provide us with a list of the postal codes that make up the special area(s) ${ }^{2}$.
3. If you need taxfiler data at small area levels, but the data in the standard databanks do not meet your needs, you can select other variables from the tax form. We will then process the data for the standard level of geography you require.
4. If neither the data from the standard databanks nor the geography suit your requirements, we can produce new data for the variables you select and the geography you request.

Special Orders for Small Area Data products are priced on a cost recovery basis and vary with the complexity of each request. These data can be produced at any time of the year, subject to the normal release dates of our regular products. Contact the Regional Office nearest you for more information.

## Notes:

1 User-defined area: An area defined by the data user as the specific area for which data are required. This would apply only to an area which is not a " standard area." It could include any one or combination of areas whose boundaries are a combination of standard areas or a combination of postal codes.

2 The postal code listing required is called a Conversion File. This electronic file will be used by our staff to aggregate the different postal areas that make up your user-defined area. Two columns of information are required in the Conversion File: the first contains the list of six-character postal codes included in the user-defined areas and the second shows the area to which each postal code is assigned. The user-defined area is identified by a code of one to four digits.

Geographic availability: Data are available for any user-defined area that comprises one or more postal codes, anywhere in Canada. Data are subject to confidentiality limits to ensure the confidentiality of Canadians.

Confidentiality: As with Small Area and Administrative Data Division' s other products and services, Special Orders for Small Area Data are subject to the confidentiality restrictions outlined in the introduction.

## Longitudinal Administrative Databank

The Longitudinal Administrative Databank (LAD) is a powerful research tool for longitudinal socioeconomic analyses. By following the same individuals over several years, longitudinal data allow you to explore the changes Canadians experience over time.

The LAD is a $20 \%$ longitudinal file of taxfilers for the years 1982 to 1999, with additional years added as they become available. This databank is made up of a wide variety of income and demographic variables such as employment and self-employment income, social assistance benefits, age, gender, and family composition. Plus, diverse variables such as RRSP contributions and alimony are also available.

Each selected individual in the study is represented by a record comprised of individual, parent (or spouse), and family information. The individuals represented either filed a personal tax return or are the spouse of a filer. The characteristics of these individuals are then recorded for every year they appear.

Data can be requested on individuals and/or census families, subject to confidentiality restrictions.

The LAD has been designed as a research tool. As such, custom retrievals for our clients are the output norm. We work with each client to determine their specific data requirements and to assist in data interpretation.

Contact the Regional Office nearest you for more information.

Geographic availability: Data can be derived for the provinces, territories and Canada. Availability of sub-provincial data for smaller areas (census metropolitan areas and postal areas) is dependent on sample size and confidentiality restrictions.

Reference Documents Available: An Introduction to the Longitudinal Administrative Databank (LAD); LAD Dictionary; and LAD Families. Also available for reference are LAD research papers.

Download your own copy of the LAD Dictionary, free on Statistics Canada' s Web site http://www.statcan.ca/english/concepts/ 0009813C0019e.pdf.

## Old Walk / New Walk

This utility product was designed to help our clients better use our other data products. Old Walk/New W alk shows the changes in Canadian postal walks between two points in time. A user is now able to compare the current postal walks (updated monthly) against the walks used at the time the data were originally released.

For example, you may wish to purchase the latest Family Data; however, you are concerned that the postal walks have changed significantly since it was first released. By using Old Walk/New W alk you will be able to see the percentage change in the original walks used (the old walks) and the current walks in the same area (the new walks).

This report on Old Walk/New Walk includes the following:
! old postal walk number
! new postal walk number
! \% of old walk that is included in the new walk (or, postal codes common to both walks as a \% of the old walk)
! \% of new walk that is derived from the old walk (or, postal codes common to both walks as \% of the new walk)

When you purchase any of our data products, you can receive Old Walk/New Walk FREE. Subsequent updates without data purchases are subject to a fee. See the Pricing Section for more information.

Historical availability: This product was introduced in 1995.

## RELEASE DATES

The small area standard databank products are released at various times throughout the year. The release dates shown below are target dates, and may vary subject to operational requirements. To view the product description, click on the $\mathcal{O}$.

| Small Area Data Product Name | Release Date |
| :--- | :---: |
| Family Data | July |
| Seniors | July |
| Neighbourhood Income and Demographics | July |
| Economic Dependency Profiles | July |
| Labour Force Income Profiles | Jostal Area Profiles |
| Canadian Savers | September |
| Canadian Investors | Canadian Investment Income |
| Canadian Taxfilers | November |
| Canadian Capital Gains | November |
| RRSP Contributors | November |
| Charitable Donors | November |
| Longitudinal Administrative Databank | November |

## PRICING

## STANDARD PRODUCTS

Pricing for small area data standard products is determined by the number of tables and the levels of geography desired. There are price savings when more than one product is ordered at the same time. However, when product tables are ordered from both the final and preliminary databanks, both sets of tables are priced individually. Data on families and individuals are included in the final databanks; the series of financial products are taken from the preliminary databank.

## Preliminary File:

RRSP Contributors
RRSP Contribution Limits (Room)
Canadian Savers
Canadian Investors
Canadian Investment Income
Canadian Taxfilers
Canadian Capital Gains
Charitable Donors

Final File:
Neighbourhood Income and Demographics
Families
Seniors
Postal Area Profiles
Migration Estimates
Labour Force Income Profiles
Economic Dependency Profiles

To determine which Price Group grid will provide the cost of the desired standard product, consult the Product Availability table. This table also indicates the levels of geography available for each product. (See Geographic Indicators for the definitions of the different levels of postal geography.)

Price Group A is used for tables showing Forward Sortation Area (FSA) Totals, City Totals and Rural Postal Codes. The cost for the first table and the first area is $\$ 80$. The cost for each additional area is $\$ 5$. Each additional table is $\$ 5$ per geographic area.

Price Group B is used for tables showing Postal Walks, Census Divisions, Census Metropolitan Areas and for the Postal Area Profiles. The cost for the first table and the first area is $\$ 160$. The cost for each additional area is $\$ 10$. Each additional table is $\$ 10$ per geographic area.

Price Groups C, D, E and F contain the discounted prices available when data are ordered for an entire province/territory or for all of Canada. This volume discount is not applicable to any sub-provincial level.

## Pricing Example:

As mentioned above, the pricing starts again at the base price of $\$ 80$ or $\$ 160$ when a new table is chosen from a different databank. For example, one table from RRSP Contributors and one table from Savers, both at the FSA level, would cost \$80 + $\$ 5=\$ 85$, yet one table from RRSP Contributors and one table from Seniors, both at the FSA level, would cost $\$ 80+\$ 80=\$ 160$.

## Bonus - extra data!

PLUS, as a bonus, when you order standard data for all Urban FSAs, or higher postal geography levels, not only are the data provided for the level requested, but all the data for the higher levels of postal geography are provided too. For example, the level of geography for an Urban FSA is 03, so when you order data for all the Urban FSAs in an area, you will also receive the relevant data for levels 04-12. AND, for every data order we will include the national and relevant provincial totals.

## HISTORICAL DATA DISCOUNT

Additional savings are available when you order more than one year of data. Data for previous years will cost only $30 \%$ of the current price when you order the current year's data. For example, if the most current Family Data are 1998 and you need 1993 to 1998, you will pay full price for the 1998 data while 1993, 1994, 1995, 1996 and 1997 will each be only $30 \%$ of the cost of the 1998 data. This discount applies to standard products only.

## SPECIAL ORDERS FOR SMALL AREA DATA

The prices for Special Orders for Small Area Data vary with the complexity of each request. For further information contact the Regional Office nearest you. See the product description for detailed information on our customized product capabilities $\boldsymbol{\theta}$.

## OLD WALK / NEW WALK

Each time a NEW order is placed for data at the postal walk level you can receive this utility product FREE. However, should you require an update of this information yet do not need to purchase another data product, a fee equal to half the cost of one table of the original data purchase will be charged.

For example, if 2 Family Data tables were purchased for postal walks in 3 Forward Sortation Areas (FSAs) you would be charged $\$ 210$ for the data and receive the Old Walk / New Walk information for no extra charge. Then at a later date you decide you need to have the most current Old Walk / New Walk information, but do not need to update the tables, a fee of $\$ 90$ will be charged for the Old Walk / New Walk update. $\$ 90$ is one half of $\$ 180$ - the price of one Family Table for postal walks in 3 FSAs.

The maximum charge for and Old Walk / New Walk update is $\$ 2,500$. This would cover all the data for Canada. Other provincial maximums are listed in Price Group C. Refer to the Table 1 column for actual maximum charges (i.e., this is the actual cost, and not one half of this price).

For detailed information on this product, see the product description

## Standard Product Availability

All data products from the Small Area and Administrative Data Division, Statistics Canada, are priced according to the number of data tables purchased and the geography selected. This chart will help you determine the Price Group (A-F) and available geography.
Click on the Price Group letter to move to the required chart.

*) consists of more than one table
Effective: February 2000

## Price Group A, \$80 + \$5

## Prices are per table for FSA totals, city totals and rural postal codes.

To calculate the total cost of the data product being ordered, go to the column that represents the number of tables being ordered, and follow that column down to the row that represents the number of areas or regions ordered (i.e., the number of urban FSAs, the number of city totals and/or the number of rural postal codes).
The figure at the intersection of that column and row represents the price of the data being ordered.
For example, 5 tables for 9 regions would cost $\$ 300$, as illustrated by the shaded area below.

|  | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ | $\mathbf{1 1}$ | $\mathbf{1 2}$ | $\mathbf{1 3}$ | $\mathbf{1 4}$ | $\mathbf{1 5}$ | $\mathbf{1 6}$ | $\mathbf{1 7}$ | $\mathbf{1 8}$ | $\mathbf{1 9}$ | $\mathbf{2 0}$ |

Effective December 1998
Prices are subject to change without notice. These prices do not include taxes.

## Price Group B, \$160 + \$10

## Prices are per table for postal walk information, based on the count of FSAs. Prices are also per table for Census Divisions and Census Metropolitan Areas

To calculate the total cost of the data product being ordered, go to the column that represents the number of tables being ordered, and follow that column down to the row that represents the number of areas or regions being ordered (i.e., the number of urban FSAs, CDs or CMAs).

The figure at the intersection of that column and row represents the price of the data being ordered.
For example, 5 tables for 9 regions would cost $\$ 600$, as illustrated by the shaded area below.

## LIMITED USE DATA PRODUCT LICENCE AGREEMENT

The Government of Canada (Statistics Canada) is the owner or a licensee of all intellectual property rights (including copyright) in this data product. In consideration of your payment of the requisite fee, you or your organization, as the case may be, (hereinafter referred to as the "licensee") are granted a non-exclusive, non-assignable and non-transferable licence to use this data product subject to the terms below.

This licence is not a sale of any or all of the rights of the owner(s). This data product may be used only by you or your organization, as the case may be. No part of the data product nor any right granted under this agreement shall be sold, rented, leased, lent, sub-licensed or transferred to any other person or organization. The licensee shall not use any part of the data product to develop or derive any other data product or data service for distribution or commercial sale, without a licence to do so. The licensee may not disassemble, decompile or in any way attempt to reverse engineer any software provided as part of the data product.

The licensee may not transfer this data product to or store the data product in any electronic network for use by more than one user unless it obtains prior written permission from Statistics Canada and pays any additional fees.

This data product is provided "as-is," and Statistics Canada makes no warranty, either express or implied, including but not limited to, warranties of merchantability and fitness for a particular purpose. In no event will Statistics Canada be liable for any indirect, special, consequential or other damages however caused.

This agreement will terminate automatically without notice if the licensee fails to comply with any term of this agreement. In the event of termination, the licensee must immediately return the data product to Statistics Canada or destroy it and certify this destruction in writing to Statistics Canada.

It is YOUR RESPONSIBILITY to ensure that your use of this data product complies with these terms and to seek prior written permission from Statistics Canada for any uses not permitted or not specified in this agreement.

## ANY USE WHATSOEVER OF THIS DATA PRODUCT SHALL CONSTITUTE YOUR ACCEPTANCE OF THE TERMS OF THIS AGREEMENT. For further information please contact:

## GEOGRAPHIC INDICATORS

The following tables define the geographic indicators (levels) available for small area data. The first table describes the $\mathbf{1 2}$ postal areas and the second describes the 2 available Census areas. These geographic indicators appear on the data tables for each product.

| Level of Geography (L.O.G.) | Postal Area | Description |
| :---: | :---: | :---: |
| 12 | Canada | This level of data is an aggregation of the provincial/territorial totals (code 11). The national total is identified by the region code Z99099. |
| 11 | Province or Territory Total | This level of data is an aggregation of the following geographies within a province: <br> These totals are identified by a provincial/territorial postal letter, then a "990" followed by the province/territory code, as follows: |

| Level of Geography (L.O.G.) | Postal Area | Description |
| :---: | :---: | :---: |
| 10 | Other Provincial Total ("P" Pot) | This level of data is an aggregation of small communities in the province that had less than 100 taxfilers, where these communities are combined into a "pot". Before 1992, it was identified by the same codes as the provincial/territorial totals, and only the "Delivery Mode" codes 2 and 3 distinguished between the two. To avoid this problem, starting with the 1992 data, an "8" appears after the provincial/territorial letter instead of a "9". The "9" will be reserved for the provincial/territorial total, as explained in 11 above. These "pot" codes are as follows: |
| 09 | Rural Postal Code (Not in City ) | This level of geography pertains to rural communities that have one and only one rural postal code. These standalone rural postal codes can be identified by a "zero" in the second position of the postal code and a level of geography code 09. <br> The 1999 databanks contain 4,186 areas coded as level of geography 09. |

| Level of Geography (L.O.G.) | Postal Area | Description |
| :---: | :---: | :---: |
| 08 | City Total | This level of data is an aggregation of the following geographies for unique place names within a province/territory: <br> They have the following format: e.g., Edmonton = T95479; Regina $=$ S94876. The pattern is the postal letter of the city plus "9" in the second position (indicating a total), followed by a 4 digit numeric code for the community (often called "CityID"). <br> The 1999 databanks contain 922 areas coded as level of geography 08. |
| 07 | Other Urban <br> Area <br> (Nonresidential within city "E" Pot) | This aggregation of data (or "pot") covers nonresidential addresses within an urban centre and all other data not otherwise displayed. Commercial addresses, post office boxes and general delivery are included, as are residential addresses with too few taxfilers to report separately. They can be recognized by codes that are similar to the city totals, with a distinguishing difference: an "8" will follow the city postal letter rather than the " 9 " of the city total (e.g., Edmonton $=$ T85479; Regina $=$ S84876). <br> The 1999 databanks contain 481 areas coded as level of geography 07. |

| Level of Geography (L.O.G.) | Postal Area | Description |
| :---: | :---: | :---: |
| 06 | Rural Postal Code (Within City) | These data pertain to rural postal codes that belong to communities with more than one rural postal code. These occur in areas that were formerly serviced by rural delivery service and changed by Canada Post to urban delivery service or in communities served by more than one rural postal code. Rural postal codes of this type can be identified by a "zero" in the second position of the postal code and a level of geography code 06. <br> The 1999 databanks contain 369 areas coded as level of geography 06 . |
| 05 | Suburban Service | Sparsely populated fringe areas of urban centres may receive their postal service from an urban post office by delivery designated as "suburban service". Their region code retains all six characters of the postal code. Suburban Services are located inside an urban FSA, usually adjacent to more highly populated areas, and mail is delivered by a contractor to group boxes, community mail boxes and/or external delivery sites (e.g., kiosks, miniparks). <br> The 1999 databanks contain 25 areas coded as level of geography 05. |
| 04 | Rural Route | Reasonably well settled rural areas may receive their postal service from an urban post office by delivery designated as "rural route", where mail is delivered by a contractor using a motorized vehicle to a group of boxes or to gate boxes. Their region code retains all six characters of the postal code. Rural routes are located outside an urban FSA. <br> The 1999 databanks contain 890 areas coded as level of geography 04. |

| Level of Geography (L.O.G.) | Postal Area | Description |
| :---: | :---: | :---: |
| 03 | Urban FSA (Residential Area) | The urban Forward Sortation Area (FSA, identified by the first three characters of the postal code) includes all residential addresses covered by the first three characters of a postal code in a particular urban area (not including levels 04 and 05 ). Only residential FSAs are considered for these databanks. This level of data is an aggregation of: <br> An Urban FSA of this type can be identified by the FSA followed by three blanks. <br> The 1999 databanks contain 1,813 areas coded as level of geography 03. |
| 02 | Other Postal Walk | This level of data is an aggregation of urban residential postal codes unallocated to a letter carrier route and postal walks with less than 100 taxfilers. A postal walk record of this type can be identified by a region code which is the FSA followed by three blanks, and the postal walk number "XXXX". <br> The 1999 databanks contain 205 areas coded as level of geography 02. |
| 01 | Postal Walk | This is the finest level of data and is an aggregation of urban residential postal codes allocated to a letter carrier route. A postal walk of this type can be identified by a region code which is the FSA followed by three blanks, and the postal walk number. <br> The 1999 databanks contain 19,160 areas coded as level of geography 01 . The total population of these areas is 21,961,810 (with an average population of 1,146). |

## CENSUS AREAS

| Level of Geography | Census Area | Description |
| :---: | :---: | :---: |
| 41 | Census Metropolitan Area (CMA) | The general concept of a CMA is one of a very large urban area, together with adjacent urban and rural areas which have a high degree of economic and social integration with that urban area. CMAs have a population of at least 100,000 based on the previous census. Once designated as a CMA, the area remains so even if the population subsequently decreases. <br> There are 26 CMAs in the 1999 databanks: <br> 001 St. John's, Newfoundland <br> 205 Halifax, Nova Scotia <br> 310 Saint John, New Brunswick <br> 408 Chicoutimi-Jonquière, Québec <br> 421 Québec, Québec <br> 433 Sherbrooke, Québec <br> 442 Trois-Rivières, Québec <br> 462 Montréal, Québec <br> 505 Ottawa-Hull (Québec part) <br> 505 Ottawa-Hull (Ontario part) <br> 532 Oshawa, Ontario <br> 535 Toronto, Ontario <br> 537 Hamilton, Ontario <br> 539 St. Catharines-Niagara, Ontario <br> 541 Kitchener, Ontario <br> 555 London, Ontario <br> 559 Windsor, Ontario <br> 580 Sudbury, Ontario <br> 595 Thunder Bay, Ontario <br> 602 Winnipeg, Manitoba <br> 705 Regina, Saskatchewan <br> 725 Saskatoon, Saskatchewan <br> 825 Calgary, Alberta <br> 835 Edmonton, Alberta <br> 933 Vancouver, British Columbia <br> 935 Victoria, British Columbia |

| Level of <br> Geography | Census Area | Description |
| :---: | :---: | :--- |
| 21 | Census <br> Division <br> (CD) | Applies to the geographic areas established by provincial <br> law, which are intermediate geographic areas between the <br> census subdivisions and the province (e.g.. counties, <br> regional districts, regional municipalities, etc.). |
| There are 288 CDs in the 1999 databanks, based on the <br> 1996 Census boundaries. |  |  |

## SPECIAL GEOGRAPHY

Clients may select geographical areas of their own definition, areas that are not part of the standard areas listed in these tables (for example, bank services areas, retail store catchments areas). For this, clients must submit a list of postal codes that make up their special areas, and we will aggregate the micro data to correspond to that area of interest. For more information about this service, contact the Regional Office nearest you.

See the product description for detailed information on our customized product capabilities $\boldsymbol{\theta}$.

| Level of <br> Geography | Name | Description |
| :---: | :--- | :--- |$|$| 93 | Total for all user-defined <br> areas | This level represents the sum total of all user- <br> defined areas and is the total of levels 91 and 92 <br> described below. |
| :---: | :--- | :--- |
| 92 | Other user-defined areas | This level is an aggregation of the user-defined <br> areas that were too small, in terms of population, <br> to have information compiled on those areas <br> individually (i.e. fewer than 100 taxfilers). |
| 91 | Special user-defined <br> area | Any area showing a code "91" is an area defined <br> by a specific user according to that user's needs <br> (for example, health districts, school catchment <br> areas, etc.). |
