

# Agriculture Value Added Account

## Agriculture Economic Statistics

**November 2002**

Statistics Canada  
Agriculture Division  
Farm Income and Prices Section

Catalogue No. 21-017-XIE is a semi-annual publication available free on the Internet at <http://www.statcan.ca>

### Highlights

#### Value of production continued to climb in 2001

The value of agricultural production reached a record high of \$45.5 billion in 2001, up 5.7% from 2000. In current dollars, the value of agricultural production has been increasing each year since 1991, except for a small drop in 1997. The average annual increase from 1991 to 2001 was 5.4%, compared with an average increase of 2.1% from 1981 to 1991.

Sales of agricultural products in 2001 stood at \$40.5 billion. Other major sources of income were program payments (\$3.8 billion) and custom work receipts (\$1.8 billion).

Sales of agricultural products to other sectors increased 7.7% to \$32.3 billion from 2000 to 2001, as a record number of cattle, pigs and chickens were sold at higher prices. Sales of agricultural products to other farms made up 20.2% of all agricultural product sales in 2001, rising 3.1% to \$8.2 billion.

#### Fourth straight increase in net value added

Net value added (the value of production less input expenses, business taxes and depreciation) increased 7.1% in 2001 to a record high of \$10.6 billion.

---

### Note of Appreciation

Canada owes the success of its statistical system to a long standing co-operation between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Published by authority of the Minister responsible for Statistics Canada.

La version française de cette publication est disponible (n° 21-017-XIF au catalogue).

Net value added in 2001 was distributed as follows:

- \$3.1 billion in unincorporated operator returns,
- \$2.4 billion in interest charges,
- \$2.1 billion in non-family wages,
- \$1.4 billion in family wages,
- \$1.1 billion in rent paid to non-operators,
- \$547 million in corporation profits.

**Distribution of net value added, Canada, 2001**

## Symbols

The symbols described in this document apply to all data published by Statistics Canada from all origins including surveys, censuses and administrative sources, as well as straight tabulations and all estimations.

- . figures not available for any reference period
  - .. figures not available for a specific reference period
  - ... figures not appropriate or not applicable
  - P** preliminary
  - r** revised
  - x** suppressed to meet confidentiality requirements of the Statistics Act
  - E** use with caution
  - F** too unreliable to be published
- 

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

## CONCEPTS AND METHODS

### Introduction

This publication is part of a series of bulletins that also includes:

- Net Farm Income - Agriculture Economic Statistics (21-010-XIE),
- Farm Cash Receipts - Agriculture Economic Statistics (21-011-XIE),
- Farm Operating Expenses and Depreciation Charges - Agriculture Economic Statistics (21-012-XIE),
- Value of Farm Capital - Agriculture Economic Statistics (21-013-XIE),
- Farm Debt Outstanding - Agriculture Economic Statistics (21-014-XIE),
- Direct Payments to Agriculture Producers - Agriculture Economic Statistics (21-015-XIE),
- Balance Sheet of the Agriculture Sector - Agriculture Economic Statistics (21-016-XIE),
- Farm Business Cash Flows - Agriculture Economic Statistics (21-018-XIE).

All bulletins in this series can be obtained free on the internet at the Statistics Canada web site ([www.statcan.ca](http://www.statcan.ca)). Notes on concepts and methods are also included in each bulletin.

This particular publication presents annual estimates of value added starting from 1981. Data highlights are provided for the most current year.

The electronic publication is first available in June. It includes preliminary estimates for the calendar year just ended. The following January, the publication is re-issued with revisions to the preliminary estimates. Revisions to the June issue can extend back two years, while those in January generally apply to three years. The date provided at the top right corner of each table is the last time that a revision was made to that table.

All data appearing in this publication are available through the Canadian Socio-Economic Information Management System (CANSIM II, table 002-0004), Statistics Canada's corporate computerized data base network and information retrieval service.

The Client Services and Marketing Unit, Agriculture Division, Statistics Canada can be contacted at 1 (800) 465-1991 or by email at [agriculture@statcan.ca](mailto:agriculture@statcan.ca) for further information and/or to obtain data in a different medium.

Statistics Canada is committed to ensuring that there is no disclosure of confidential material and therefore all data are subjected to restrictions prior to release.

### Concepts

The value added account (or production account) has been designed to: record the value of economic production in the Canadian agricultural sector; distribute the income earned in this production to the factors of production; be based on the establishment concept; and display the information on a calendar year basis, by province.

Economic production can be defined as any process which creates value or adds value to existing goods. Consistent with this definition, the Canadian System of National Accounts defines economic production as the production of goods or services which are exchanged for money in the market economy.

Under the establishment concept, the standard unit of aggregation is the establishment. This is defined as the smallest operating entity which produces a homogeneous set of goods and services for which records provide data on value of output and cost of inputs.

The format of the value added account is designed to display sources and allocation of income (value of production). This account displays information at an aggregate level and does not display the detail which is available in the net farm income series.

The sources of income fall into four major categories: sales of agricultural products, sales of secondary production, other sources, and own-account production uses.

### Sources of value of production

All **sales of agricultural products** are included in the value added account, including sales to other sectors and sales within the sector (farm to farm sales). Sales to farms outside the province of production are considered as sales to other sectors, as the objective is to produce provincial level accounts.

The use of the establishment concept implies that all **secondary production activities** of farm establishments should be included in the value added account. These might include farm woodlot production, sales of sand and gravel, or provision of recreational services. The income from all secondary production activities should be matched with associated expenses.

**Other sources of income** and the associated expenses are included to account for all income earned by farm establishments. The distinction between a non-agricultural sale and other income is not always clear. Federal and provincial government payments, received by farm establishments for participation in a variety of support and stabilization programs, are included because they are directly associated with farming activity. Income from the rental of farm land, received by the farming

establishment, and custom work receipts are also included here.

**Own-account production** includes income-in-kind and the value of inventory change. Income-in-kind is the measure of the value of products produced on a farm which were consumed on the farm where the production occurred, instead of being sold. Production from farm gardens kept solely for own-consumption purposes is interpreted as operator household activity and is therefore excluded. The value of inventory change represents the economic value of the physical change in farm-owned inventories. Own-account production excludes the use of agricultural products, which are produced on the same establishment and used to produce other agricultural products for the market place.

The sum of these four sources of income results in the total value of production or the gross output of the agricultural sector.

#### Allocation of value of production

The allocation of that income falls into four major categories: expenses on inputs, business taxes, depreciation, and net value added.

**Expenses on inputs** include payments for goods and services which are used in the production of agricultural goods or services. These purchases may have been made from other sectors of the economy or other agricultural establishments. These intermediate inputs exclude, by definition, primary inputs such as labour and capital. Inter-farm sales, which are included as a source of income, are therefore offset by inter-farm purchases.

**Business taxes** are taxes paid in the course of production activities. These taxes consist of property taxes and taxes on purchased inputs. Since taxes on purchased inputs are included in expenses on inputs, business taxes consist of property taxes only.

**Gross value added** consists of payments to the factors of production and **depreciation** allowances (on an economic basis).

**Net value added** represents the value of economic production from agricultural establishments, and is expressed as gross value added minus **depreciation** allowances.

#### Distribution of net value added

Net value added is then distributed to the various factors of production, including wages to non-family members; rent to non-operator landlords; and interest to lenders of capital.

Corporation profits, a return for ownership, can be allocated to incorporated agricultural businesses. For unincorporated farms it is impossible to distinguish

between labour and profit. Consequently, the unincorporated operator family returns represent returns to operators and immediate families for labour and ownership. Further, wages to family members are distributed to result in returns to the unincorporated farm operators for unpaid labour and equity capital.

#### Methods and Data Quality

The method used to derive value added account estimates is based, whenever possible, on estimates which are used in the calculation of net income, including the farm cash receipts and farm operating expense series. Consequently, this outline is designed to be used with methodology reviews of the net income based data (publication Net Farm Income - Agriculture Economic Statistics 21-010-XIE).

Data on sales of agricultural products to other farms and expenses on inputs from other farms are the sum of the following differences: total feed minus commercial feed; total seed minus commercial seed; and total livestock and poultry purchases minus interprovincial and international imports. Data related to total feed and seed expense are considered to be of good quality but the portions allocated to commercial feed and seed are weak. Data on livestock and poultry purchases are also weak, given problems identified with these estimates (i.e., the lack of good data to measure interprovincial movements).

Sales of secondary production are underestimated as it only includes the value of forest products sold. It is impossible to quantify this underestimation or its impact on the value of production, since there is no known source of information on the value of non-agricultural activities performed on farms, such as recreational activities and exploitation of gravel and sand pits.

The adjustments made to split farm land rental income between operator owners and non-operator landlords are based on the biennial Farm Financial Survey (FFS) information which is considered to be of good quality.

The adjustments made to split total wages into family and non-family wages, based on the Census of Agriculture, are considered to be of good quality.

Once revisions are made to the cash receipts and the expense series, they are then incorporated into the value added account. These revisions take place intercensally, after the results of the Census of Agriculture have been reviewed, and during non-intercensal periods, when more administrative data or larger Taxation Data Program (TDP) survey samples are available. Please refer to the concepts and methods of these contributing series for more detail on the revision process (publications Farm Cash Receipts - Agriculture Economic Statistics 21-011-XIE and Farm Operating Expenses and Depreciation Charges - Agriculture Economic Statistics 21-012-XIE).

### Sources of value production

**Sales of agricultural products to other farms** represent the inter-farm sales of the following three items: livestock and poultry, feed, and seed.

Livestock and poultry inter-farm sales are based on TDP data. The TDP data represent total purchases on the part of producers. The data are adjusted by subtracting imports from other provinces and from outside Canada.

Inter-farm sales of feed are derived by subtracting estimates of commercial feed (expense series) from total feed expenses.

Inter-farm sales of seed are derived by subtracting estimates of commercial seed (expense series) from total seed expenses.

**Sales of agricultural products to other sectors** represent total crop and livestock receipts, excluding cash receipts from sales of forest products (cash receipts series).

**Sales of secondary production** currently include only sales of forest products (cash receipts series).

TDP estimates are used to measure **custom work receipts**.

**Program payments** data are based on estimates from the cash receipts series.

**Government rebates** data are based on estimates of rebates reducing expenses from the expense series.

**Farm land rent** represents total rental income to operators for the rental of agriculture land and buildings. It is based on the expense series estimates for cash rent and adjusted to exclude rent paid to non-operators, using survey data related to the quantity of farmland rented to others. The survey data is obtained biennially from the FFS.

**Income-in-kind** data are based on estimates from the net farm income series.

The **value of inventory change** represents the value of the physical change in inventories as calculated for net income purposes.

**Total value of production** is the sum of all sources of income.

### Allocation of value of production

**Expenses on inputs from other farms** (purchases) combine the estimated sales of agricultural products to other farms with the farm land rent.

**Expenses on inputs from other sectors**, based on the farm operating expense series (gross of rebates), include: building and fence repairs, electricity, telephone and other telecommunication, heating fuel, machinery fuel and repairs, fertilizer and lime, pesticides, commercial seed, irrigation, twine, wire and containers, crop and hail insurance, commercial feed; livestock and poultry purchases, artificial insemination and veterinary fees, business insurance premiums, stabilization premiums, legal and accounting fees, and all other expenses. Also included is gross custom work expense based on TDP estimates.

**Business taxes** currently include only property tax estimates from the expense series.

**Gross value added** is derived by subtracting expenses on inputs and business taxes from the total value of production.

**Depreciation** data are based on estimates from the expense series.

**Net value added** is calculated by subtracting depreciation from gross value added.

### Distribution of net value added

The labour compensation is an estimate of **non-family wages** and is derived by deducting family wages (see below) from total wages (expense series). Non-family wages include room and board.

**Rent to non-operators** is calculated by applying a ratio obtained from FFS data to the sum of cash and share rent estimates (expense series).

**Interest** data are based on estimates from the expense series.

**Corporation profits** are estimated at the provincial level by the Income and Expenditure Accounts Division, Statistics Canada. These profits are before taxes.

**Unincorporated operator family returns** are derived residually by subtracting non-family wages, rent to non-operators, interests and corporation profits from net value added.

**Family wages** are derived by subtracting room and board and non-family wages from total wages. Ratios of non-family wages to total wages are obtained from the Census of Agriculture. Room and board are excluded since they are added to non-family wages.

**Unincorporated operator returns** are derived residually by subtracting family wages from unincorporated operator family returns.

## How to obtain more information

Inquiries about this product and related statistics or services should be directed to Client Services, Agriculture Division, Statistics Canada at 1-800-465-1991 or by email: [agriculture@statcan.ca](mailto:agriculture@statcan.ca)
