TRANSPORTATION DATA GUIDE

Making our data work for you

Are you maximizing your use of our data? Do you know what's available and can you access it easily?

Whether you are in the public or private sector, a business person, a research consultant or a student, having the right data is often critical to the success or failure of your project. First, you have to determine your information requirements and then find out what data are actually available, who to contact and how to obtain it. This process can be very time consuming.

Statistics Canada collects and publishes a large amount of data on all modes of transportation. For example, do you know the level of shipments of commodities last quarter? Where are the key access points to the United States and which commodities are moving through them? How can you determine market share? This guide will familiarize you with the sources for answers to these questions and more and show you how to access them. It will allow you to take advantage of what Statistics Canada has to offer you.

The Guide contains a description of each survey at Statistics Canada that has transportation-related information. Each survey is listed with the survey name, a person to contact, phone number and fax number, a brief description of the transportation related information in the survey, the periodicity of the survey and the publication catalogue number and name where the information can be found. To order any of these publications call our Statistical Reference Center at 1-800-263-1136. The Guide contains a Table of Contents and an Index to make it easier to use.

Simplify your search for data by using the Guide or calling 1-800-263-1136.

Claudio Pagliarello

Tel.: (613) 951-1508
Fax: (613) 951-9040
E-mail: paglcla@statcan.ca

Description of Survey:

The annual financial statistics, which includes transportation, are collected from each province and territory. They are then converted into a standard classification.

Definition of Transportation in Survey:

All costs (salaries and wages, equipment expenses, maintenance and insurance) related to conveying pupils to and from school, either between home and school, between schools or on field trips (e.g. transportation to extra curricular activities) sanctioned by the board as part of its educational program are included. Transportation or conveyance costs are the costs of board-owned school transportation facilities, contracted services for transportation, the provision of fares to students, for the use of local public transportation and any other payments or expenses incurred in providing services instead of transportation.

Transportation data are available by economic classification:

- salaries and wages
- fringe benefits
- supplies and services
- fees and contractual services
- other operating expenses
