The SLID Research Paper Series is intended to document detailed studies and important decisions for the Survey of Labour and Income Dynamics. These research papers are available in English and French. To obtain a summary description of available documents or to obtain a copy of any, please contact Philip Giles, Manager, SLID Research Paper Series, by mail at 11-D8 Jean Talon Building, Statistics Canada, Ottawa, Ontario, CANADA K1A 0T6, by INTERNET ([GILES@STATCAN.CA](mailto:GILES@STATCAN.CA)), by telephone (613) 951-2891, or by fax (613) 951-3253.

## **EXECUTIVE SUMMARY**

SLID conducts two annual interviews: Labour data in February and Income data in May. These data are collected using computer-assisted interviewing. Thus there are no paper questionnaires required for data collection. The questions, responses and interview flow are documented in other SLID research papers. This document presents the same information for the Contact and Demographic portions of these interviews, which are common to both the Labour and Income Interviews. (In general, there may be some changes in questions, but the intent is the same for both interviews.)

The Contact module is the first set of data collected. It is information collected to update household composition and place of residence. For each person identified in Contact, the demographic module collects (or updates) the person's name, date of birth, sex, marital status and relationship to every other household member.

## 1. INTRODUCTION

Each January, the labour interview for the Survey of Labour and Income Dynamics (SLID) is conducted. The, in May, SLID income data are collected. Both use computer-assisted interviewing (CAI) for data collection. The questions particular to each interview are preceded by two sets of questions: the CONTACT module and the DEM module.

In Appendix 2, Figures 1 and 2 present an overview of the flow of the interview and the flow of the CONTACT and DEM modules, respectively.

The CONTACT module collects / updates information on household members. For each household member listed at the last interview, the interviewer asks whether he/she is still a household member. For those who are not, information is collected on when the person moved out, the reason for leaving, and the new address and telephone number. Information on telephone number and address is updated if the entire household has moved. Finally, the interviewer asks if there are any new household members. If so, the interviewer first checks whether the new person is a “ghost” (those persons who used to belong to the household but who have moved out). A list of all former household members is provided from all previous SLID interviews for this purpose. If the person is not on this list, the person's name is added to the household roster. The date when the person joined the household is asked as well as the person's previous province of residence.

The DEM module collects / updates the date of birth, sex, marital status and the relationship between each household member with every other household member.

CAI is paperless interviewing. This document is therefore a written approximation of the CAI interview, or the questionnaire. The CAI process is as follows:

a) A question appearing on the computer screen is read aloud to the respondent.

- b) The respondent's answer is entered directly by the interviewer.
- c) Based on the answer given, and/or age or other flow criterion, the computer determines the next question to be asked and displays it on the screen.

This research paper presents the content of the CONTACT and DEM modules<sup>1</sup> including question wording, possible responses, and flows of questions.

## **2. HOW TO READ THIS DOCUMENT**

Question numbers: For each section, the question numbers generally refer to the actual numbers used in the software and which appear on an interviewer's computer screen. Text in capital letters is read, as worded, by the interviewer. Those questions in lower case with "Interviewer:" at the beginning are questions to be answered directly by the interviewer without asking the respondent. Those questions with "Internal logic:" at the beginning and which have an "N" instead of a "Q" in their name are questions answered directly by the computer. They are invisible to the interviewer, and are required to direct question flow.

Pre-fill items: These are items specific to each respondent's interview. The software adds the relevant information into the question, making it simply a matter of reading for the interviewer. Prefill items include:

[respondent] - This is the first and last name of the household member that the questions refer to. This is not necessarily the person who is talking to the interviewer.

[parent's name] - Used in determining relationships, this is the parent's name in a parent-child relationship.

---

<sup>1</sup> The labour and income questions are presented in other SLID research papers.

[child's name] - Used in determining relationships, this is the child's name in a parent-child relationship.

[calculated age] - Calculated from the reported date of birth, it is used to verify the date of birth information.

[current year] - This is the obvious.

[reference year] - This is the year for which the information is collected.

[marital status] - The reported value, used in subsequent questions to identify dates of changes in marital status.

[previous address] - For persons reporting a move, this is the previous address of residence.

[current address] - The current address of residence.

Headers: For some question groups in CAI, important information is noted at the top of the screen. This information is given at the beginning of each section description.

Ranges: Ranges of acceptable responses are specified for some of the questions. For example, in CON-Q11D (when moved in) a range of 01/01/reference year to the current date exists. If the interviewer tries to enter a number outside this range, the system will not accept this.

Dates: All dates are entered by number in boxes, using the DD/MM/YY format. When a numeric value for month (1 to 12) is entered, the appropriate text flashes. For example, if the interviewer enters a date 26/09/93, the screen shows:

26 09 September 1993.

Function Keys: Interviewers have a number of keys on the computer (function keys) available to them. The following functions are those of relevance to this document.

Comment - gives the interviewer the opportunity to add additional information in a note that will be attached to the data for that question. These comments are often useful during data processing.

Don't Know - to indicate if the respondent doesn't know the answer to the question. This answer is shown in this paper as DK.

Refusal - to indicate if the respondent refuses to answer the question. This response is shown in the paper as R.

Options - gives the interviewer access to some optional functions or information rosters. Although there are several options available to the interviewer, the ones relevant to the CONTACT AND DEM modules are: Household list - name, age, sex, marital status of each household member; Change name - required to change a respondent's name in the system, either because it had been entered incorrectly at some time, or as a result of an actual name change (for example, after a marriage);

Calculate year of birth - used to derive the year of birth based on the person's age (for proxy reporting when the year of birth is not known, but the approximate age is known);

QLIST - This provides a list of all questions answered so far, helpful when the interviewer needs to return to a previous question to make a correction.

### **3. CHANGES FROM LAST YEAR**

- Being the second year of interviews, the concept of “ghosts” was required. When a new person in the household is reported, SLID wanted to differentiate between returners (persons who used to be household members, had moved out, and then moved back) , and joiners (persons who are new to the household). Ghosts are persons who had left the household since it had been selected into the SLID sample. Thus, a ghost roster is provided for each household. The interviewer checks this list

when new persons are reported to determine whether the person is a returner.

- Information on household relationships was only asked for those households with a new person (joiner or returner). For other households, interviewers were given the option of reviewing the relationship information.
- Two questions relating to the dwelling were added: one for dwelling type [Single detached house / Semi-detached, town-house (including row house, garden house) / Duplex (one above the other) / Apartment / Other], and the other for dwelling tenure (Dwelling owned by a member of the household?). These questions are CON-Q6C and CON-Q6D, respectively.

## **APPENDIX 1**

### **IDENTIFYING FAMILY RELATIONSHIPS**

Most surveys which contain household and family variables construct family relationships in relation to a household reference person or "head". For example, a family composed of a husband, wife and two children might use either the husband or the wife as the reference person. We would end up with relationships of head, spouse, and children. By collecting family relationships based on a reference person we lose detailed information about family relationships.

SLID collects an expanded set of demographic data by asking, each year, the relationship of every household member to every other household member, rather than by the traditional method of relating everyone to one reference person. The detailed relationship data are to data users, as well as frequently used family groupings.

SLID collects data on all persons in the selected households and following them for six years. The objective of this relationship approach is to collect data that reflect the changes that have taken place in family relationships in recent years, for example, to identify blended families. As well, in a longitudinal survey, this approach avoids the need to re-ask relationships if the reference person leaves the household.

This new method of establishing household/family relationships is facilitated by the use of computer-assisted interviewing (CAI).

After age, sex and marital status have been completed for all household members, relationships are collected. The screen displays the question "*What is the relationship of . . . (member's name) to . . . (member's name)?*" and the response categories. The interviewer selects the appropriate category, but does not read them unless a probe is required. Figure 1 portrays an example of the

screen that would be displayed for a household consisting of George and Mary Roe, Kelly (his daughter by his first wife) and Martha Winter, the mother of Mary.

Figure 1

The screenshot shows a window titled "WHAT IS THE RELATIONSHIP. . . ?". Below the title are two columns: "OF" and "TO".

**OF**

- George Roe
- Mary Roe
- Kelly Roe
- Martha Winter

**TO**

- Mary Roe
- Kelly Roe
- Martha Winter

**Relationship Options:**

- Husband/Wife
- Common-law
- Father/Mother
- Child
- Sister/Brother
- Grandparent
- Grandchild
- In-law
- Other related
- Unrelated
- Same-sex partner

Each time a relationship of father/mother is selected, an additional window displays a secondary question asking whether the person is the birth or step-parent. Following our example, the question would ask: *“Is George Roe the birth or step parent of Kelly Roe?”* The response options the interviewer can select are birth, step, adoptive or foster child. The question was deliberately kept short to encourage a probe for stepchildren but the four responses are provided to record “adopted” or “foster” if volunteered by the respondent.

When relationships have been completed for all household members an optional review screen is available, as shown in Figure 2.
